

InventHelp Inventor Develops Accessory for Use in Trucks with Sleepers (VET-408)

InventHelp, founded in 1984 in Pittsburgh, is submitting the BUNK ADJUSTER to companies for their possible feedback.

PITTSBURGH, PA ([PRWEB](#)) November 21, 2016 -- "I am an over-the-road trucker, and I cannot sleep when my feet are above a 0-degree angle," said an inventor from Las Vegas, Nev. "Of course, I do not always have the luxury of parking my truck on a flat surface. That is why I came up with this accessory to enable me to adjust my sleeping posture so that I can sleep perfectly horizontally even when I am parked on an uneven surface."

She developed the patent-pending BUNK ADJUSTER to enable the driver to adjust his or her sleeping position, especially when the truck is parked on an uneven surface. The accessory ensures that the individual is able to sleep with the body positioned at the desired angle. This helps the driver to sleep more soundly. It promotes restful sleep for more attentive, careful driving upon awakening. The device is adaptable for use in virtually any sleeper cabin. Additionally, it lessens stress and provides added peace of mind.

The original design was submitted to the Las Vegas office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-VET-408, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
