

## **Automotive Security System Invented by InventHelp Client (MTN-2595)**

*Pittsburgh-based InventHelp is submitting the ALARM TECH to appropriate companies for their possible feedback.*

PITTSBURGH, PA ([PRWEB](#)) November 29, 2016 -- While car alarms have improved automotive security in recent years, there are times when the vehicle owner is out of earshot when the alarm sounds. Fortunately, an inventor from Bronx, N.Y., has found a way to connect with the owner, in these situations.

She developed the patent-pending ALARM TECH to alerts drivers remotely when their car alarms are activated or when their lights are left on. As such, it allows drivers to either call 911 or deactivate their car alarms from the safety of their homes. At the same time, it prevents theft of vehicles and their contents. It, therefore, reduces crime and the need for police intervention. As a result, it affords peace of mind to concerned motorists. It is also convenient, effective and affordably priced. In addition, it is easy to install and operate.

The inventor's personal experience inspired the idea. "I had an experience in my neighborhood where a motorcycle traveled down the street and set off several car alarms. However, the owners were not home or nearby to hear or turn off the alarms."

The original design was submitted to the Manhattan office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-MTN-2595, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
