

InventHelp Inventor Develops Key-Fob Protector (NJD-1261)

Pittsburgh-based InventHelp is working to submit the SAFE KEY to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) November 30, 2016 -- "Basically everyone now has car keys with a remote key fob featuring an array of controls to lock and unlock the doors, as well as activate the panic alarm," said an inventor from Milltown, N.J. "In order to avoid pressing these buttons accidentally, I came up with this device."

He developed the SAFE KEY to prevent the buttons on the keyless entry remote from being pressed accidentally. This keeps the parked vehicle safe and secure, which provides added peace of mind, safety and crime prevention. It is adaptable for use with virtually any keyless entry remote. The unit is producible in a variety of decorative designs. Furthermore, the accessory is designed for ease of use.

The original design was submitted to the New Jersey office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-NJD-1261, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
