

InventHelp Client's Device Facilitates Vehicle-Chassis Cleaning (TOR-9625)

A leading inventor service firm, InventHelp is submitting the CHASSIS CLEAN to companies for their possible feedback.

PITTSBURGH, PA ([PRWEB](#)) December 04, 2016 -- "As a mechanic I know the rust and damage that results from accumulated road or coastal sea salt, as well as caked dirt and debris," said one of two inventors from Niagara Falls, Ontario, Canada. "This expensive problem has inspired me and the co-inventor to develop an efficient and ergonomic way to keep the chassis of a vehicle clean." They have created a prototype of their idea.

The patent-pending CHASSIS CLEAN is a device that enables a user to clean the chassis of a car or truck more quickly and easily. It ensures thorough removal of salt, dirt and debris, which helps reduce wear and tear, as well as damage. It also eliminates the need to lie on the ground and reach under the vehicle. Overall, the device saves time, effort and money.

Serving as an alternative to conventional vehicle-cleaning methods, the CHASSIS CLEAN also is usable for campers, trailers and RVs.

The original design was submitted to the Toronto office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-TOR-9625, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
