

## **InventHelp® Client Patents “Volumizer” – Invention Could Provide Enhanced Fuel Economy for Combustion Engines**

*InventHelp is working to submit this idea, the Volumizer, to appropriate companies in the hopes of their good faith review.*

PITTSBURGH, PA ([PRWEB](#)) December 02, 2016 -- [InventHelp](#), a leading inventor service company, announces that one of its clients, an inventor from Oregon, has invented a redesigned fuel-supply system for all internal combustion engines. This invention is patented and a virtual prototype is available.

The “Volumizer” would lessen fuel consumption while optimizing engine performance. It would allow for reduced emissions, and is designed to save vehicle owners money at the pump. According to the inventor, it also could decrease dependence on foreign oil. It would be ideal for use on all internal combustion engines, including trucks, airplanes, buses, trains, etc.

The system would be comprised of a one-way valve, specially designed microwave, air-conditioner coils and other wiring, sensors and hardware. The one-way valve keeps pressure from going back to the fuel pump. The raw fuel would be delivered through tubing to the one-way valve before entering the small microwave. The microwave heats and excites the molecules to allow them to accept more air. The vaporized fuel is in a very combustible state to be directed into the combustion chambers. Not only does this optimize fuel consumption to reduce costs for motorists, but it reduces harmful exhaust emissions normally caused by incomplete combustion. It could be offered in after-market kit form and installed into vehicles by professional mechanics.

“When water is boiled, steam is created, which increases the water volume by 16,000 times,” said the inventor. “I thought the same thing could be done with fuel. My system increases its volume four or five times, vaporizing it prior to combustion.”

[InventHelp](#) is attempting to submit the invention to companies for review. If substantial interest is expressed, the company will attempt to negotiate for a sale or royalties for the inventor. For more information, telephone Dept. 13-PTL-575 at (800) 851-6030.
