

Modified Wheelchair is Easier to Load and Unload - Designed by InventHelp Client (DLL-3113)

Pennsylvania-based InventHelp is submitting this idea, the SIDE STEP WHEELCHAIR, to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) December 08, 2016 -- An inventor from Forth Worth, Texas works in transportation, and he experienced difficulty in transferring a wheelchair-using passenger into and out of the vehicle. It was so time-consuming and painful that he decided that there had to be a safer and better way to perform the task.

The patent-pending SIDE STEP WHEELCHAIR makes loading and unloading a wheelchair and its user onto or off of a vehicle quicker and easier. It also aids in transporting the person in general. As a result, it avoids back/overextension injuries among caregivers, and reduces the amount of strength and effort needed.

Ergonomic, easy to use and serving as an alternative to conventional wheelchairs, the SIDE STEP WHEELCHAIR can be produced in design variations.

The original design was submitted to the Dallas office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-DLL-3113, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
