

Inventor and InventHelp Client Develops Engine-Hoist Accessory (FED-1648)

InventHelp, founded in 1984 in Pittsburgh, is submitting the ENGINE HOIST ADAPTOR to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) December 08, 2016 -- "I am a welder, and I work alone much of the time," said an inventor from Allyn, Wash. "There are occasions where I need an extra pair of hands in the shop to get something done, like when I need to move a heavy object. I came up with this to lend me a helping hand."

He developed the patent-pending ENGINE HOIST ADAPTOR to keep the load level as it is raised and lowered. The kit makes it easier to move a heavy object from one location to another. The design eliminates physical stress and strain. The invention holds a heavy item in place during installation. Also, it is usable to remove items from the bed of a pickup truck. Furthermore, as there is no chain, the load will not swing dangerously.

The original design was submitted to the Seattle office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-FED-1648, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
