

InventHelp Inventor Develops Windshield-Cleaning Device (HUN-197)

Pittsburgh-based InventHelp is attempting to submit the BUG SWIPER to appropriate companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) December 09, 2016 -- "I grew tired of having to scrape the remains of bugs off my windshield," said an inventor from Dayton, Texas. "I thought that there had to be a quicker, easier, less burdensome way to get my windshield clean, which led me to develop this accessory."

He created a prototype for the BUG SWIPER to provide a convenient way to clean debris and smudges off the windshield. The accessory allows the remains of dead bugs to be cleared from the windshield with ease. This ensures that the driver has a clear view of the road ahead. It is adaptable for use with any vehicle. Additionally, the invention is ideal for use by drivers with limited mobility who may struggle to clean the windshield manually, and drivers with a long-term destination (helps with tiresome jobs).

The original design was submitted to the Houston office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-HUN-197, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
