

Inventor and InventHelp Client Develops Enhanced Automotive Tinting (SDB-967)

A leading invention company, InventHelp is submitting the TRANSTINT to companies for their possible feedback.

PITTSBURGH, PA ([PRWEB](#)) December 14, 2016 -- "I know of a lot of people who want darker window tinting but fear that they will be unable to see at night if the tint is too dark," said an inventor from Dulzura, Calif. "In order to provide just the right amount of protection from glare and to ensure privacy, I came up with this."

He developed the TRANSTINT to provide optimal protection from sunlight and glare. The accessory prevents the driver and passengers from being blinded by bright sunlight. This enables the driver to have a clear view of the road ahead. It minimizes distractions in order to promote safer driving. Also, the tint will not interfere with nighttime visibility. Additionally, the invention is adaptable for use with any new or existing vehicle.

The original design was submitted to the San Diego office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-SDB-967, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
