

## **InventHelp Inventors Develop System for Targeting Motorists Not Buckled Up (AAT-1831)**

*InventHelp is working to submit this idea, the S.B.G., to applicable companies for their possible feedback.*

Pittsburgh, PA ([PRWEB](#)) December 16, 2016 -- "After a severe automotive collision changed both of our lives, we began thinking of ways that we could save lives and solve an ongoing problem for law enforcement," said one of two inventors from Blairsville, Ga. "Our personal mission led us to develop this seat-belt detector."

They developed the S.B.G. to quickly and easily alert police as to whether or not the vehicle occupants are wearing seat belts. The system eliminates the need to pull motorists over in order to determine if seat belts are being worn. It enables law-enforcement professionals to target motorists who are breaking the law. The invention promotes responsible seat-belt use, which is designed to enhance roadway safety. Additionally, the unit ensures that evidence can be provided for court cases.

The original design was submitted to the Atlanta office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-AAT-1831, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
