

InventHelp Inventor Develops Automotive Accessory for Pet Owners (HUN-270)

InventHelp, founded in 1984 in Pittsburgh, is submitting this idea, the DOGGY LADDER, to companies for their consideration.

PITTSBURGH, PA ([PRWEB](#)) December 20, 2016 -- "My dog is small and has a hard time jumping up into the car," said an inventor from Houston, Texas. "In order to help my dog gain entry into the vehicle more easily, and also to make it so that he can get out with ease too, I came up with this convenient accessory."

He developed the DOGGY LADDER to enable a pet to climb into and out of the vehicle with ease. The unit eliminates the need for the animal to jump into and out of the vehicle. The device is ideal for use with smaller breeds of dogs and pets with limited mobility. The accessory makes it easier to take pets along on trips. It is designed for ease of use. Furthermore, the DOGGY LADDER features a lightweight, easily portable design that can be stored away inside the vehicle between uses.

The original design was submitted to the Houston office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-HUN-270, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
