

Blind People Catch the Right Buses With the SMART EYE - Designed by InventHelp Client (SFO-293)

InventHelp, a leading invention submission company, is submitting the SMART EYE to companies for their consideration.

Pittsburgh, PA ([PRWEB](#)) December 26, 2016 -- An inventor from El Sobrante, Calif., has taken his personal concern and decided to use it to benefit many people. "Many times I've seen a blind person waiting at a bus stop and having to ask other people what bus has arrived since he or she can't see the bus numbers," he said. "I've decided to help reach a solution to this problem by developing this idea."

The patent-pending SMART EYE enables a blind person to identify and board the correct bus in an easy manner. This avoids the frustration of missing buses and eliminates the need to ask other people. Overall, it promotes convenience, independence and peace of mind.

Versatile, user-friendly and producible in an alternative version, the SMART EYE is ideal for all blind people who commute by bus.

The original design was submitted to the San Francisco office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
