

## **System Optimizes Vehicle Security - Designed by InventHelp Client (AVZ-1477)**

*InventHelp, a leading invention submission company, is submitting the CAR SENSOR CAMERA to companies for their review.*

PITTSBURGH, PA ([PRWEB](#)) December 28, 2016 -- A concerned inventor from San Antonio, Texas, has designed a way to optimize vehicle security. "Once a driver hit my car with his car and fled the scene, and another time I saw someone hit another person's car and drive away," he said. "Since vehicle owners can't always be aware of what's going on with or around their vehicles, I decided to design a way to be more aware and defensively equipped in the event of an accident or hit and run."

The CAR SENSOR CAMERA is a system that allows for more awareness about his or her vehicle and its surroundings. It also provides reliable recourse after an accident or hit and run by enabling the user to be defensively equipped and invulnerable to scams. Overall, it promotes peace of mind

Versatile, easy to use and designed for convenient and quick operation, the CAR SENSOR CAMERA can be produced in design variations.

The original design was submitted to the National Sales office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
