

InventHelp Inventors Design More Convenient and Versatile Generator (DLL-3140)

Pittsburgh-based InventHelp is submitting the GENALT to appropriate companies for their possible consideration.

PITTSBURGH, PA ([PRWEB](#)) March 31, 2017 -- Generators are quite useful in a wide variety of situations when electric power is not accessible, and not only during power outages. However, most generators are heavy, cumbersome and unable to help with jump-starting vehicles. "Our design is a solution to all these problems," said one of two inventors from Royse City, Texas.

The patent-pending GENALT serves as a more convenient and versatile alternative to conventional generators. It's easier to transport and maneuver, and it provides electric power in a wide variety of situations, including vehicle jump-starts. Overall, it promotes peace of mind.

Compatible with many appliances and power tools, vehicles, lighting systems, etc., and compact, lightweight, portable and easy to use, the GENALT is ideal for contractors, businesses and households.

The inventors have created a prototype of their idea.

The original design was submitted to the Dallas office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
