

InventHelp Inventor Designs PARKING PAL (MTN-2401)

Pittsburgh-based InventHelp is submitting the PARKING PAL to appropriate companies for their review and potential feedback.

PITTSBURGH, PA ([PRWEB](#)) November 09, 2015 -- “I was afraid of other vehicles bumping my parked car,” said an inventor, from Brooklyn, N.Y. “I thought there needed to be a convenient warning system to prevent those accidental bumps, so I invented this.” He invented the patent-pending PARKING PAL.

The PARKING PAL simplifies the process of parking in tight or difficult spots. In doing so, it protects a parked vehicle from accidental bumps and it helps to prevent scuffs, nicks, dents and other potential harm. It also eliminates the need to guard a parked vehicle from a careless driver. The invention features an effective design that is convenient and easy to use so it is ideal for vehicle owners. Additionally, the PARKING PAL is adaptable for use with most automobiles and trucks and it is producible in design variations.

The inventor described the invention design. “My design offers a safe and effective way to park in tight spots.”

The original design was submitted to the Manhattan office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 14-MTN-2401, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
