

## **InventHelp Invention Increases Capacity of Pickup Truck Beds (SAH-1254)**

*A Pennsylvania-based invention firm, InventHelp is working to submit the NEN SYSTEM to companies for their possible feedback.*

PITTSBURGH, PA ([PRWEB](#)) June 08, 2017 -- The continuing popularity of pickup trucks attests to the fact that they are ideal for hauling a variety of items and materials. However, until now, owners had no way of increasing the capacity of the truck bed for larger loads or for use as a camper. Fortunately, an inventor from Glen Ellen, Calif., has found an easy way to add that needed space.

He developed patent-pending NEN SYSTEM to provide quick and easy access to extra room in the back of a pickup truck. As such, it increases the cargo capacity of the vehicle and protects the items carried in the truck bed. At the same time, it is adjustable to accommodate different-sized loads. Besides that, it converts a pickup truck bed into a camper. In addition to saving time and effort, this invention is also versatile, practical and easy to operate. Other appealing features include convenience, effectiveness and affordable pricing.

The inventor's personal experience inspired the idea. "I needed more space for hauling loads in the back of my truck than I could get using the existing truck cap," he said.

The original design was submitted to the Sacramento office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
