

InventHelp Inventor Develops Convenient Trailer Accessory (CNC-132)

InventHelp, a leading inventor service company, is working to submit Hold and Load to companies for their review.

PITTSBURGH, PA ([PRWEB](#)) October 03, 2017 -- “I thought there needed to be a better way to deal with the straps on a roll-up trailer door,” said an inventor, from Rock Hill, S.C., “so I invented the HOLD AND LOAD.”

The patent-pending HOLD AND LOAD provides an effective way to secure the strap on a roll-up trailer door. In doing so, it eliminates the need to cut or tie the strap. As a result, it ensures that there is a clear and safe path when loading and unloading and it provides added protection. The invention features a durable design that is convenient and easy to use so it is ideal for trucking companies and warehouse facilities. Additionally, the invention is producible in design variations. This invention also provides the loop in the strap for the driver so that he or she can place a hand through for a firm and secure grip while closing the trailer door and stepping down from the edge of the trailer to the ground.

The inventor described the invention design. “My design helps to prevent the straps from catching and the forklift pulling the door down on the driver, loader or freight. This prevents claims and costly repairs and unusable equipment.”

The original design was submitted to the Charlotte office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-CNC-132, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
