

## **Child Safety Transmitter Developed by InventHelp Client (AAT-2039)**

*InventHelp, founded in 1984 in Pittsburgh, is attempting to submit this idea, the Check & See, to applicable companies for their consideration.*

PITTSBURGH, PA ([PRWEB](#)) October 05, 2017 -- Tragically, a number of infants become injured or die as a result of being left behind in a hazardously hot vehicle.

An inventor from Athens, Ga., has invented CHECK & SEE, a safety system that prevents injuries and deaths to babies and young children left unattended in motor vehicles, and also could keep young children from wandering away when outside the vehicle. "I was inspired by how many news stories I see every year about parents forgetting their children in their cars," said the inventor. "I wanted to invent something to prevent that from happening." CHECK & SEE reminds parents not to leave a baby or young child in a vehicle. Additionally, it warns a parent when their child has begun to wander away.

This invention would provide parents with peace of mind that they would not accidentally leave their child in a vehicle, as well as let their child wander off. This invention would benefit busy and forgetful parents, as well as grandparents and other childcare providers.

The original design was submitted to the Atlanta office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-AAT-2039, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
