

Protective Upgrade Invented for Emergency Vehicles (HLW-1821)

InventHelp, a leading inventor service company, is working to submit S.A.F.E. (Safety Apparatus for Emergency Vehicles) to companies for their review.

PITTSBURGH ([PRWEB](#)) October 20, 2017 -- All too often, first responders are hit by cars and killed or injured while stopped along the road providing emergency care. Fortunately, an inventor from Davie, Fla., has decided to pursue an idea that would prevent such tragedies.

He developed the patent-pending S.A.F.E. (SAFETY APPARATUS FOR EMERGENCY VEHICLES) to improve the visibility of stopped emergency vehicles on the road. In other words, it provides additional impact protection. As such, it has the potential to save lives and prevent injuries and property damage. Furthermore, it is designed to absorb the impact if the emergency vehicle is struck from behind. Finally, while it's readily accessible when needed, it is positioned out of sight and out of the way when not in use.

The inventor's personal concerns inspired the idea. "Whenever I either heard an account of an emergency vehicle involved in an accident or personally saw first responders at the scene of an emergency, I was concerned for their safety," he said. "I wanted to find a way to protect them as they do their jobs."

The original design was submitted to the Hollywood office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-HLW-1821, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
