

Inventors Develop Tire-Changing Aid (NAV-1105)

InventHelp, founded in 1984 in Pittsburgh, is attempting to submit this idea, the Tire Skate, to applicable companies for their consideration.

PITTSBURGH (PRWEB) November 03, 2017 -- "Changing a tire can be a real struggle, especially for those with limited mobility or other physical restrictions," said one of two inventors from Nashville, Tenn. "In order to make the process of changing a tire more convenient and efficient, we designed this device."

They created a prototype for the patent-pending TIRE SKATE to make it easier to change a tire. The unit assists with lining up the lug nuts without having to raise or lift the tire. The design prevents the individual from getting dirty while changing the tire. The tool saves time and effort, and reduces the physical stress and strain normally involved in the process. In addition, it is easy to use.

The original design was submitted to the Nashville office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-NAV-1105, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
