

## **Backseat Vehicle Sensor for Children Developed by InventHelp Inventor (DLL-3159)**

*InventHelp, a leading inventor service company, is working to submit CHILD CAR SENSOR to companies for their review.*

PITTSBURGH, PA ([PRWEB](#)) November 20, 2017 -- Since 1998, an average of 38 children have died per year after being left in a car. Depending on the season, the child can suffer from heatstroke or hypothermia, resulting in serious injury or death.

An inventor from Mesquite, Texas, has invented CHILD CAR SENSOR, a safety system that prevents injuries and deaths to babies and young children left unattended in motor vehicles. "I wanted to invent this item because every time I watch the news, I see another story about a child dying after being left in a hot car," said the inventor. "I want to do my part to help stop that from happening." CHILD CAR SENSOR improves safety for children strapped into a car seat.

This invention provides peace of mind for concerned parents, grandparents and other child care providers. It ensures that a tendency for busy parents to be forgetful does not result in the death of their child. The inventor suggests this invention can also be adapted for use on school buses.

The original design was submitted to the Dallas office of InventHelp. It is currently patent pending and available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-DLL-3159, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
