

## **Power Washer Invented for Undercarriage of Vehicle (CPC-275)**

*InventHelp, founded in 1984 in Pittsburgh, is attempting to submit this idea, the Under Car Sprinkler, to applicable companies for their consideration.*

PITTSBURGH ([PRWEB](#)) November 29, 2017 -- Winter weather often plays havoc with the undercarriage of a motor vehicle, particularly when salt accumulates there along with the road dirt and grime. Luckily an inventor from Vernon, Conn., figured out how to clean this hard-to-reach area.

He developed a prototype for the patent-pending UNDER CAR SPRINKLER to simplify cleaning of the undercarriage of a motor vehicle with little time and effort. As such, it reduces the potential for costly wear, damage and corrosion development and eliminates expensive vehicle repairs and replacement. Easy to maneuver on hard surfaces, this innovation is lightweight, portable and user friendly. Other appealing features include convenience, effectiveness and an affordable price. In addition, the simple design of this invention minimizes production costs.

The inventor's experience in public works inspired the idea. "We needed a way to remove the large deposits of salt clinging to the underside of our plow trucks and decided this idea was the answer," he said.

The original design was submitted to the Connecticut office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16- CPC-275, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
