

InventHelp Inventor Develops Snow Removal Tool for Higher Profile Vehicles

InventHelp, a leading inventor service company, is working to submit Roof Relief to companies for their review.

PITTSBURGH ([PRWEB](#)) December 15, 2017 -- In many situations, the law requires that a vehicle is completely cleared of snow before it can be driven, something that helps to improve the safety conditions on the road for all drivers. This task can be tedious and can lead to strained muscles, especially for those who must clear snow off higher profile vehicles such as vans and light trucks.

An inventor from Fairfield, Conn., has invented the patent-pending ROOF RELIEF, a tool to safely reach and remove accumulated snow from an automotive vehicle with a higher roof profile. "I work for the postal service and have to personally clean the snow off of postal vehicles," said the inventor. "The tool that I am provided with is too small for that job, so I decided to invent something that would make that task easier." ROOF RELIEF eliminates the need to use a ladder which could be unsafe due to wet, slippery or freezing conditions. Additionally, it provides an effective method of cutting through ice accumulation while preventing scratching of the vehicle paint finish.

This invention provides peace of mind for concerned or safety conscious motorists. It is easy to use and reduces the amount of time needed to clear snow and ice off of the roof of a motor vehicle. It could also be efficient at clearing some snow from a garage roof or shed.

The original design was submitted to the Connecticut office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
