

## **InventHelp Inventor Designs Soothing Car Seat Simulator (SDB-1148)**

*InventHelp, a leading inventor service company, is working to submit the Baby Comfort Sleeper to companies for their review.*

PITTSBURGH ([PRWEB](#)) December 17, 2017 -- One of the most difficult and time consuming tasks for parents of infants or toddlers is soothing them when they are being fussy or downright inconsolable. After bouncing, rocking or distracting their child with no relief, oftentimes parents then choose to drive their child around in the car as a way to get them to fall asleep.

An inventor from San Diego, Calif., has invented BABY COMFORT SLEEPER, a unique accessory for infants designed to comfort and soothe them to sleep. "I invented this device because of my own personal experience as a mother and grandmother," said the inventor. "I have driven the children around in the car in the middle of the night as a way to try to soothe them to sleep." BABY COMFORT SLEEPER provides parents with a way to soothe their fussy child to sleep without having to take them for a car ride, eliminating the risk of the parent dozing off behind the wheel when driving around in the middle of the night.

This invention provides peace of mind for busy parents that they have a simple way to soothe their child to sleep. Additionally, it conveniently allows the parents to focus on other tasks or children while their child is safely being comforted to sleep.

The original design was submitted to the San Diego office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers.
