

Inventor Develops De-Icing System for Motor-Vehicle Windows (TOR-9847)

InventHelp, a leading inventor service company, is working to submit Portable De-Icer to companies for their review.

PITTSBURGH, Pa. ([PRWEB](#)) December 17, 2017 -- "I did not want to have to waste time standing around outside my vehicle, chipping ice from my windows with a stubborn hand-held scraper," said an inventor from Toronto, Ontario, Canada. "I thought that there had to be a more quick and efficient way to get rid of icy accumulation."

He created a prototype for the PORTABLE DE-ICER to provide a quick and easy way to clear ice from the front and rear windshield, side windows and mirrors. The system eliminates the need to chip away at the ice with a hand-held scraper. This saves time and effort when readying the vehicle for winter-weather travel. The unit helps the motorist keep warm and comfortable in cold-weather conditions, which offers added peace of mind. Additionally, the device features a compact, easily portable design that stores in the trunk of the vehicle or in the garage.

The original design was submitted to the Toronto office of InventHelp. It is currently patent pending and available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-TOR-9847, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
