

Inventhelp Inventor Develops Convenient and Ergonomic Baby-Transport Method

Pittsburgh-based InventHelp, a leading inventor service company, is submitting this client's idea, The One and Only in the hopes of a food faith review.

PITTSBURGH ([PRWEB](#)) November 29, 2017 -- Many people are familiar with the strain of having to get babies from one place to another, especially when it involves getting them into and out of vehicles. "My wife had difficulty removing the baby's car seat and stuffing it into the trunk, and I've also observed parents struggling to carry babies in detached car seats," said one of two inventors from Glendale, Calif. "In order to solve these problems, the co-inventor and I came up with the CAR SEAT ROLLER."

This invention provides a more convenient and versatile way to secure and transport a baby. It eliminates hassles normally associated with conventional baby car seats. It also prevents the need for access to a conventional stroller. As a result, it helps prevent strain and hassle.

Ergonomic, easy to use and producible in different sizes, colors and designs, the patent-pending CAR SEAT ROLLER serves as an alternative to conventional strollers.

The original design was submitted to the Los Angeles office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-LAX-826, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
