

Inventhelp Inventor Develops Device to Improve Signaling for Bicyclists

Pittsburgh-based InventHelp, a leading inventor service company, is submitting this client's idea, Safety Device, in the hopes of a food faith review.

PITTSBURGH ([PRWEB](#)) December 01, 2017 -- An inventor, from Tacoma, Wash., thought there needed to be a better way for bicycle riders to communicate with motorists, so he invented the patent-pending SAFETY DEVICE.

The SAFETY DEVICE provides an effective way to indicate if a bicyclist is turning left, right or braking. In doing so, it could help to prevent miscommunications and accidents. As a result, it enhances safety and it provides added peace of mind. The invention features a practical design that is convenient and easy to use so it is ideal for bicyclists. Additionally, the SAFETY DEVICE is producible in design variations.

The inventor described the invention design. "My design enhances safety by improving signaling for bicyclists."

The original design was submitted to the Seattle office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-FED-1727, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
