

Rolling Thunder Metal Works Inc. Hammers Out New Innovation in an Old Design

Rolling Thunder Metal Works Inc. officially released its line of Signature Series Lifetime Guaranteed Metal Shaping Hammers today. These are the next sets of tooling in the Signature Series Lifetime Guaranteed tool line that looks to grow to more than a dozen tools by year end.

Palatine, IL ([PRWEB](#)) July 12, 2004 -- "Each one of the six hammer designs is uniquely crafted and hand finished," said Barry Nielsen, President, Rolling Thunder Metal Works Inc., "which produces a tool of uncompromising quality that is really worthy to carry an Unconditional Lifetime Guarantee."

Each hammer in the line is built from 4140 cold finished billet steel, ground and polished to a mirror finish. The heads are fitted with long hickory handles which are made in North Carolina. What really sets them apart from other body or shaping hammers on the market is the length of the handles and the designs of the heads. The basic metal shaping hammer head hasn't changed much of the years, but the materials, weights and reach of these hammers has now brought the designs into the twenty-first century. The six hammers consist of two styles of 1 1/2" diameter by 6" long bumping and blocking hammers, two styles of 2" diameter by 6" long bumping and blocking hammers, a 2" diameter by 8" planishing hammer and a deep reach 2" diameter by 10" long bumping hammer.

The Signature Series Hammer Sets can be viewed and ordered online starting at \$85.00 at <http://www.rollingthundermetalworks.com>. Rolling Thunder Metal Works Inc. is a Palatine, IL custom metal fabrication shop specializing custom metal fabrication tooling, and metal shaping for all types of cars, bikes, and trucks.
