

## **California EPA Air Resources Board approves sale of the "Exhaustonator"**

*California EPA Air Resources Board approves sale of the "Exhaustonator" distributed by KHS Distributors of Toms River, NJ.*

Toms River, NJ ([PRWEB](#)) July 30, 2004 -- The California Environment Protection Agency Air Resources Board approves sale of the "ExhaustonatorJ" distributed by KHS Distributors of Toms River, NJ. The Exhaustonator's revolutionary technology provides many benefits for cars, trucks, and buses by reducing exhaust emissions and increasing fuel efficiency.

Enhanced fuel combustion - With the free out flow of engine exhausts that are not hindered by the tailpipe's back pressure, the engine is refilled with cleaner intake of fresh air, which will ensure a more complete combustion of the air-fuel mixture.

Maximized fuel efficiency - When the engine fully combusts the air-fuel mixture, fuel efficiency is naturally maximized.

Reduced HC, CO & NO(x) percentage - With the complete combustion of the engines fuel burning, the carbon monoxide (CO), hydrocarbon (HC) and nitro oxygen (NO) level is naturally reduced, even lowered to meet the environmental requirements.

Restoration of the original engine horsepower - Under good cyclic conditions, when the engine's fuel is fully combusted, the original full horsepower is restored.

The emissions inspection report clearly states the quality.

The Exhaustonator is available from J C Whitney Inc. ( [JCWhitney.com](#) ) and sells the full line of products via their catalog and online services.
