

Groundbreaking technology in Global Positioning System (GPS) Internet vehicle tracking now being sold to the public at www.trakmycar.com

An integration of both the Global Positioning Satellites (GPS) and cellular technologies, combined in your Mobile Locating Unit enable you to interact with your vehicle at any time of day or night.

Helena, MT (PRWEB) August 5, 2004 -- Direct-Track is the first to offer publicly, GPS/Internet tracking solutions for all cars, trucks, and recreational vehicles. Deregulation by FCC of telecommunications services has made GPS/cellular technology available to the public that can deliver an affordable tracking product that can be acquired with light disposable income.

Direct-Track Mobile Locating Unit (MLU) uses existing cellular airwaves and takes advantage of the global positioning system created by the U.S. government to track cars, motorcycles, and recreational vehicles. Direct-Track utilizes a constellation of 28 geo-synchronous satellites providing precise navigation and position information to the GPS receiver. This perfect marriage of technologies enables system users to track and contact vehicles at any time of the day or night via any standard web browser. In the event a car is stolen, an email and/or a cell phone call can be issued immediately, and the unit owner can disable the vehicle starter and lock the doors.

GPS is the perfect solution for small fleet owners:

One customer states, "I trust my employees, but I elected to enhance my fleet with Direct-Track. GPS tracking isn't about doubting my employees-- it's about running a business more efficiently and offering our customers the best service possible." With fuel prices on the rise, the benefits of this technology are evident. "On the whole, Direct-Track has increased our productivity significantly and reduced our fuel consumption. Direct-Track definitely delivers in terms of ROI."

Direct-Track offers affordable safety and security

"This is the first time virtually anyone can afford to track their valuable assets and loved ones. From a teen-aged driver out late at night, to the stolen car, Direct-Track delivers answers to the question, "Where?" within seconds, and all via the internet. This truly revolutionary security and safety technology grants benefits through peace of mind." Susan Kidd, Independent Business Owner, Direct-Track.
