

## **PartsRiver Online Web Services Powered by World's Largest Parts Database**

*PartsRiver announces the launch of the world's largest internet driven transportation service parts database.*

Menlo Park, CA ([PRWEB](#)) March 24, 2005 -- PartsRiver, Inc., the leading provider of data quality and intelligent spend control solutions for the Transportation and Heavy-Duty Trucking industries today announced the development of the world's largest online parts database with over 10 million part numbers from more than 1,200 suppliers. The database will power PartsRiver's Online Web Services which is in prototype with selected customers.

"The demand for a highly accurate parts database that can be customized to reflect the unique needs of individual fleets was overwhelming," said Elisa Jagerson, CEO of PartsRiver, Inc. "With our world-class network of parts suppliers and our industry leading technology, we were able to respond with an Online Searchable Database product that is receiving very positive feedback from our customers."

The Online Searchable Database is a family of products which allows customers such as fleets, dealers, distributors, and OEMs to search part numbers and all related information including cross-references on-line. It will be available in both a "public" and "private" version driven by the customer's own business rules for prices, preferred suppliers and search criteria.

About PartsRiver, Inc.

PartsRiver, Inc., is the leading provider of data quality and intelligent spend control solutions for the Transportation and Heavy-Duty Trucking industries. PartsRiver leverages data, technology, and industry expertise to unlock the power of the part information stored in today's business systems. PartsRiver's solutions provide visibility across inefficiencies in parts purchasing and inventory, where data quality is paramount. PartsRiver is a privately held corporation headquartered in Menlo Park, CA.
