

Inventor Offers Choice: Rising Gas Prices and Increased Pollution or Clean Air and Cheap Fuel

With the cost of crude oil now over \$50 per barrel, and gasoline, heating oil, propane and all petroleum products at record highs, the public is ready for a real solution. Oil companies and car manufacturers have a vested interest that prevents them from ever giving real consideration to energy alternatives, which means independent inventors have had to look to private investors to bring about the research and technology needed.

SALT LAKE CITY, UT ([PRWEB](#)) October 8, 2004 -- The presidential debates rage on without any solutions to rising gas prices and energy cost, but the real solution is not political -- it is proven technology that will end dependence on oil as well as pollution.

--Knowing you have the answer to clean-up the world's pollution is not enough. Now we must teach it to the World, or we will have failed,-- explained inventor Paul Pantone.

For the past quarter century Pantone has been undeterred by critics and detractors in his quest to find a much lower cost alternative source of energy. His motivation has been to replace the world's dependence on oil and stop the pollution of the planet by petroleum-based fuels.

--We, the people of this planet, have the right to clean air, potable water and naturally enriched soils to supply healthy food once again to feed our starving planet. We can clean up our polluted planet, but if you do not feel good it will not make a real difference to you, which is what made me start looking at Alternative Products that do make a difference,-- said Pantone.

Now the research, testing, development, and creation has been completed and Pantone is ready to apply his patented inventions to the development of new products using what he calls --global environmental energy technology-- (GEET).

This is not just another good idea. Pantone has fully researched and tested GEET, and it is now ready for application. Pantone has developed a system that cracks the fuel down no matter what fuel or additives is used -- gasoline, diesel, old oil, or even crude oil.

--Think about the money you could save if 75 percent of the fuel in your car was water, and think of the impact it would have on our environment,-- said Pantone of the remarkable fuel system he has invented.

Pantone said he is looking for individuals with experience in finance of product development, as well as those who can assist in marketing and promotion to help in the final stage he has now entered.

--The research and tests are completed. If you would like to help and be part of cleaning up our Mother Earth, we would very much like to hear from you,-- said Pantone.

Information about Pantone, his remarkable technology and inventions, as well as a history of the development of GEET can be found at his web site www.Pantone.ws.
