

## **Pluss Introduces Manufacturers Resource Planning (MRP) Module**

*Pluss Corporation is proud to introduce the M.R.P. Module for the new PTM Echelon suite; the M.R.P. Module was one of the first add-ons to PTM upgraded for the new version of PTM.*

([PRWEB](#)) February 10, 2005 -- Pluss Corporation is proud to introduce the M.R.P. Module for the new PTM Echelon suite; the M.R.P. Module was one of the first add-ons to PTM upgraded for the new version of PTM.

Details about the M.R.P. Module

The Manufacturers Resource Planning (MRP) Module from PTM Inc. is available through Pluss Corporation! This exciting module is designed for companies that use manufacturing processes and/or use bill of materials to forecast inventory needs. MRP allows the user to know what Bill of Materials (BOM) is required to manufacture or build your finished goods. You can even have multi-level kits, i.e. sub-kits inside kits. If you do not have the components required they will be backordered no matter if they are single components or components of a kit. You have the ability to sell the kit part number at the point of sale, but when going through the manufacturing process the individual components of the kit or sub-kit will display on the work order. You will be able to track the individual cost of the components and update that new cost. Ultimately you will know the cost of the entire manufacturing process and be able to schedule it in advance. MRP is a great addition to the PTM Production module.

What can production do for you?

1. Are you a company that manufactures or remanufactures parts or machinery for resale?
2. Are you a company that struggles with controlling production points?
3. Are you a company that needs more control in the production process?

These and a great many other production problems almost demand Manufacturers and Remanufacturers to use production, listed below are several of the major answers to these questions but there are many more.

- For a business that rebuilds or produces goods for resale production allows a systematic means of tracking costs and materials used in creating the end product.
- It takes the items from the time of need for producing the product to the filling of the need.
- Allows the Remanufacturer or Manufacturer to divide up costs of rebuilding or manufacturing a product over a larger number of products.
- Allows the Remanufacturer or Manufacturer to one or a multitude of products at a time
- Develops Production patterns of production with times and quantities.

Production is a powerful tool in the Manufacturing and Rebuilding industries. Contact Pluss Sales for more information at 1-800-835-9609 or visit our website at [www.pluss.net](http://www.pluss.net)
