

## **Automotive Assembly, Testing, and Inspection Firm, Selects Encompix for Engineer-to-Order Expertise**

*Automotive Assembly, Testing, and Inspection Firm, Selects Encompix for Engineer-to-Order Expertise*

([PRWEB](#)) March 8, 2005 -- SYSTEMATIX INC. ([www.systematix-inc.com](http://www.systematix-inc.com)) is located in Waterloo, Ontario, Canada, the "Technology Triangle" of Ontario, with excellent Universities and a multitude of high tech supporting industries within minutes of the corporate manufacturing facility. SYSTEMATIX has manufactured, installed, and serviced complex factory automation systems for customers in many areas of North America, and around the world.

Recently, the world class designer and manufacturer of factory automation machinery, including specialty robotic assembly and test systems for the plastic, electronic, window/door and automotive industries since 1988 selected new ERP (Enterprise Resource Planning) technology to maintain their position as an industry leader. Assembly, test, and inspection systems are specifically designed within ISO-9001 criteria for the automotive industry to meet their tough requirements. Various applications from stand alone cells to multi-station assembly lines are key elements in the SYSTEMATIX automotive automation.

SYSTEMATIX provides turnkey solutions to satisfy our customers' most difficult challenges since innovative designs are uniquely utilized. This ETO (Engineer-to-Order) environment created a technology selection challenge for the company, since many ERP vendors claiming to address the ETO market have not managed to do so.

According to TR Cutler, spokesperson for the ETO Institute ([www.etoinstitute.org](http://www.etoinstitute.org)), "The challenges that SYSTEMATIX face as an engineer-to-order manufacturers are not unique. Finding technology solutions that claim ETO functionality is not always validated. Only a few vendors actually understand and provide appropriate answers for the ETO sector. Their eventual selection makes great sense."

After careful consideration the Canadian Robotic firm selected Encompix ETO ERP. Encompix ([www.encompix.com](http://www.encompix.com)) has filled the manufacturing software requirements of Engineer-to-Order companies since 1992. The company name reflects our commitment to developing business application solutions that encompass the complex areas of project-based and job-based manufacturing. Encompix provides ETO manufacturers with a competitive advantage by improving bottom line results.
