

AJT Engineers Efficient, Odorless System for RVs and Portable Bathrooms

AJT Engineers Efficient, Odorless System for RVs and Portable Bathrooms

Cape Canaveral, FL ([PRWEB](#)) March 30, 2005 -- AJT & Associates, Inc., a scientific and engineering company is launching a new product that will allow fully operational advanced sewage treatment systems to be integrated into mobile restroom facilities. AJT will initially market the product, the Dragonfly System, to recreational vehicle and portable bathroom facility manufacturers.

AJT's patented technology utilizes an advanced aerobic system and a Programmable Logic Computer (PLC) to automate the water treatment and recycling process, eliminating the need to handle black water. With flushing and treatment capabilities, the Dragonfly acts like a miniature water reclamation plant to effectively treat and sterilize wastewater.

Modu-Built, a Tampa-based company specializing in manufacturing fiberglass modules for security and other applications, has joined efforts with AJT to integrate the Dragonfly System into one of their model units.

"AJT is teaming up with Modu-Built to launch a customized unit featuring our proprietary system, which we will incorporate into a fully operational bathroom facility," says Alfredo Teran, CEO AJT & Associates, Inc. "These units represent a small sample of the many applications in which the Dragonfly System can be integrated."

Modu-Built provides customers with the best value within the range of prefabricated, completely self-contained modular buildings. Modu-Built is the only modular buildings system, which is truly mobile and flexible. The units can be adapted for a number of applications including security buildings, disaster relief, EMS stations, and concession stands. For more information visit their Web site at www.modu-built.com.

AJT & Associates, Inc. is a scientific and engineering company that has been in operation for over seventeen years. With extensive experience in environmental control systems, AJT specializes in the design and manufacturing of advanced water and wastewater management and treatment systems. AJT serves federal, state and local government, aerospace prime contractors, and commercial clients. For more information, visit www.AJT.com or call 321.783.7989, ext. 271.
