

Transoft Solutions Opens New Office in Beijing AutoTURN® Now Available in China

Transoft Solutions Inc., developers of innovative software for the Transportation Engineering community, is proud to announce its expansion into the Asian market with the opening of its new office in Beijing, China.

Vancouver, BC ([PRWEB](#)) May 7, 2005 -- Transoft Solutions Inc., developers of innovative software for the Transportation Engineering community, is proud to announce its expansion into the Asian market with the opening of its new office in Beijing, China.

The Transportation industry in China is facing considerable pressure to keep pace with its economic growth. With billions of dollars being invested in existing and new infrastructure developments, Chinese engineers are not only turning to new and sophisticated technology to facilitate these developments in a timely manner but also to improve their quality and safety. Transoft Solutions has been providing leading edge software to the global markets since 1991. Its flagship product AutoTURN is the world's most extensively used vehicle simulation software of its kind. As part of its plans to service the Chinese markets, Transoft has customized its AutoTURN software to include Chinese standard vehicle libraries and has developed a Chinese language version of the software. AutoTURN 4.2 is a powerful yet user friendly software used extensively by designers in the planning, design and analysis of site plans, roundabouts, parking facilities, loading bays, intersections and any facility where vehicle maneuvering must be assessed. It is currently used by over 5000 organizations in more than 80 countries worldwide!

Considering that China is one of the fastest growing markets in the developing world, its ongoing development of civil projects has prompted Transoft Solutions President, Milton Carrasco to open an office in Beijing.

"We're very excited about the new office in China" says Carrasco. "In the current emerging high tech markets, there is no excuse for civil engineers not to have better access to the world's best civil engineering software. When Civil Engineers adopt proven state of the art software, the general public benefits tremendously from the outputting of better and safer designs and lower project costs".

With the economic growth of China and the need for quality design projects, Transoft Solutions' AutoTURN program will undoubtedly be a valuable asset and a necessity for every Chinese road engineer. For more information about the Chinese version of AutoTURN 4.2 please visit www.transoftsolutions.cn.

About Transoft Solutions

Transoft Solutions, Inc. has been providing innovative CAD-based software for the international engineering design community since 1991. Headquartered in British Columbia, Canada, Transoft is an industry leader in the development of state of the art software for road and airport design professionals.
