

Transoft Solutions releases ParkCAD 2.0

Transoft Solutions, the leaders in pioneering CAD based software for the architectural and engineering design sector, has just announced a new version release of its unique parking lot design software. ParkCAD 2 hosts a selection of new and powerful user-friendly features that boost 'built-in intelligent functions' with greater ease of use which will enable the end-user to quickly and efficiently generate parking layout alternatives from conceptual design right up to and including preliminary and final design layouts.

([PRWEB](#)) December 8, 2005 -- Transoft Solutions, the leaders in pioneering CAD based software for the architectural and engineering design sector, has just announced a new version release of its unique parking lot design software. ParkCAD 2 hosts a selection of new and powerful user-friendly features that boost 'built-in intelligent functions' with greater ease of use which will enable the end-user to quickly and efficiently generate parking layout alternatives from conceptual design right up to and including preliminary and final design layouts. In development since December of 2004, ParkCAD 2 has been touted by many in the parking industry to be the de facto standard for parking facility design.

Noel Dolotallas, Marketing Manager at Transoft Solutions had this to say about the software, "Our newest version (ParkCAD 2) addresses certain issues that came out of the original release. We've worked hard to incorporate ideas and suggestions provided to us by original users of ParkCAD and expert advisors. With version two we've vastly improved the user interface and included powerful new editing tools thereby making it the most advanced software of its kind in the industry today. As well, the software has been made even more user friendly, which is a very important aspect for our customers."

Lastly, Mr. Dolotallas had this to say, "We see this new version of ParkCAD as being the one people have been waiting for – something that's on par with what our users would expect from us in terms of ease of use and increased productivity. Of course it's easy to say these things but when we receive stories from scores of users applauding its usability, I have to admit it gets a little hard not to get enthused."

Additional new features for ParkCAD 2 include:

- The ability to define entrance and exit points for parking lots
- The capability to shift internal rows while generating parking lots
- Dynamic mid-island creation which allows for instant placement in parking layouts
- The ability to view aisle construction lines to visually display the area required for vehicle parking maneuvers
- Island construction lines shows the amount of space needed to design custom islands to the user's required standards
- Ability to select multiple elements (i.e. rows, stalls, islands, etc.) and edit to desired specifications and standards
- Full compatibility with AutoCAD 2006

ParkCAD 2 is intended for a wide range of users including architects, civil engineers, drafters, urban planners, CAD technicians, and land developers and is designed to integrate with Transoft's flagship product, AutoTURN, to offer an even greater practicability for parking facility design projects.

Learn more about ParkCAD 2 by going to Transoft's website where visitors can sign up for free live web-based demonstration, read a white paper, or download a trial copy of the software for evaluation.

About Transoft Solutions

Transoft Solutions, Inc. has been providing innovative CAD-based software for the international engineering design community since 1991. Headquartered in British Columbia, Canada, Transoft is an industry leader in the development of state of the art software for road and airport design professionals.
