

## **Cyber Trucker Proudly Introduces the Trucker's Workstation Laptop Stand**

*The Trucker's Workstation is a revolutionary laptop holder which mounts to the passenger's air ride seat. It allows truckers to safely use their laptop for navigational purposes while they drive. It enables truckers to get organized, increase productivity and efficiency, saving them time and money.*

([PRWEB](#)) July 8, 2005 -- The Trucker's Workstation puts your laptop to work while you drive. It's the LAPTOP HOLDER that keeps your computer at your fingertips. It's revolutionary design and capabilities will take truckers to where they have never been before.

The laptop stand gets the computer off of the floor or off the seat and protects it from damage.

The Trucker's Workstation increases efficiency, productivity & helps reduce out-of-route miles. Truckers can now get the most out of their GPS unit and mapping software.

Designed, perfected and road tested by a trucker. It is stable and secure ensuring the laptop will not fall during normal operation (the #1 cause of all laptop failure is impact damage).

The Workstation mounts directly to the passenger air ride seat reducing vibration, and its innovative design absorbs road shock.

The mounting brackets use the seat's existing bolts. Installation is quick and easy with no drilling required.

The dual cooling fans prolong laptop life, and even improve performance in some computers.

The cradle pivots and swivels for driver or passenger use and it lifts out for easy removal. This permits easy access for the passenger to enter the sleeper.

The patent pending Trucker's Workstation is backed by a limited lifetime warranty and a one year limited warranty on the cooling fans.

Truckers will never want to work another day without the Trucker's Workstation.
