

The Developer of the Hutchens Device Has Developed a New Series of Safety Solutions for All Racers

Safety Solutions, Inc., a Mooresville, NC Corporation, has released a new head and neck restraint system for the racing industry. The developer of the Hutchens device, along with the only head and neck strap safety system used in NASCAR, has created a new series of safety solutions for all racers. Mr. Trevor Ashline, President of Safety Solutions, Inc., comments, "We have added new, top-performing devices for this upcoming racing season. With the competitive nature of racing, drivers cannot afford to risk injury."

Mooresville, NC ([PRWEB](#)) December 13, 2005 -- Safety Solutions, Inc., a Mooresville, NC Corporation, has released a new head and neck restraint system for the racing industry. The developer of the Hutchens Device, along with the only head and neck strap safety system used in NASCAR, has created a new series of safety solutions for all racers.

"We have added new, top-performing devices for this upcoming racing season. With the competitive nature of racing, drivers cannot afford to risk injury," commented Mr. Trevor Ashline, President of Safety Solutions, Inc. "With over two hundred sled tests, we learned what it really takes to keep a driver safe in a single or multiple impact crash from all angles of impact. There is a lot to be learned from the crashes in racing accidents, so we applied the data along with hundreds of sled test results to develop this new device."

In the highly competitive sport of racing, the drivers need to protect themselves more today than ever before. Safety Solutions, Inc.'s mission is to offer a SFI-approved head and neck restraint system at a more cost-effective price so more racers can have access to state-of-the-art technology. As new racing technology pushes the edge of the envelope, and the audience for racing grows, drivers need to take every precaution to stay as safe as possible without losing any competitive edge.

"The Hutchens Device II Pro was the next natural step from the original Hutchens Device," says Ashline. "We were able to apply what we had learned from thousands of races and develop a comfortable device that will protect the driver without standing in the way of the racer's ability to race. All of our head and neck safety devices are SFI 38.1-rated and tested at 70 G's."

The Hutchens Device II Pro is a patented carbon fiber head and neck restraint system designed to keep the driver safe in frontal and multiple impact crashes. "On the racetrack, anything can happen when drivers are this competitive," stated Ashline.

For more information on these and other safety solutions designed for all ages, you can call 1-800-731-4404 or visit www.HutchensDevice.com.
