

IPT Performance Transmissions Announces its Modified Valve Body for Subaru 4EAT Transmissions

Because there are no commercially available shift kits, IPT has developed valve body upgrades that are designed for the Subaru Impreza, WRX, Legacy, Outback, Forrester, and Loyale 4EAT automatic transmission.

Wayne, NJ ([PRWEB](#)) December 13, 2005 -- In order to fill a need in the import performance market, IPT Performance Transmissions has developed extensive valve body modifications that are appropriate for Subaru performance automatic transmission applications.

Because there are no commercially available shift kits for these transmissions, IPT has developed valve body upgrades that are designed for the Subaru Impreza, WRX, Legacy, Outback, Forrester, and Loyale 4EAT automatic transmission- especially those that need to handle the additional power that accompanies engine performance upgrades, the installation of a turbo, or nitrous oxide injection.

Benefits which include greatly improved shift quality, increased durability, shortened shift times and lube circuit enhancements can all be realized.

As well as providing firm, positive shifts- the valve body upgrade also prevents the “bouncing off of the rev limiter” that often accompanies full throttle upshifts when the power level is increased over stock.

All of IPT’s Subaru performance transmission products can be found in their online catalog:
