SECTION 1
PURPOSE OF COMPLIANCE TEST

This Federal Motor Vehicle Safety Standard (FMVSS) 208 compliance test is part of a program conducted for the National Highway Traffic Safety Administration (NHTSA) by MGA Research Corporation (MGA) under Contract No. DTNH22-03-D-11002. The purpose of this test was to determine whether the subject vehicle, a 2004 Dodge Durango, NHTSA No. C40303, meets certain performance requirements of FMVSS 208, "Occupant Crash Protection"; FMVSS 212, "Windshield Mounting"; FMVSS 219, "Windshield Zone Intrusion"; and FMVSS 301, "Fuel System Integrity". The compliance test was conducted in accordance with OVSC Laboratory Test Procedure No. TP208-12 dated January 14, 2003.

A 50th percentile dummy was placed in the center rear designated seating position for the crash test. The data from this position will be used for research and development. This seating position does not have crash test performance requirements.
SECTION 2
TESTS PERFORMED

Test Vehicle: 2004 Dodge Durango
Test Program: FMVSS 208 Compliance
NHTSA No.: C40303
Test Dates: 1/28-4/1/04

The following checked items indicate the tests that were performed:

1. Rear outboard seating position seat belts (S4.1.2(b) & (S4.2.4)
2. Air bag labels (S4.5.1)
3. Readiness Indicator (S4.5.2)
4. Passenger air bag manual cut-off device (S4.5.4)
5. Lap belt lockability (S7.1.1.5)
6. Seat belt warning system (S7.3)
7. Seat belt contact force (S7.4.4)
8. Seat belt latch plate access (S7.4.4)
9. Seat belt retraction (S7.4.5)
10. Seat belt guides and hardware (S7.4.6)
11. Suppression tests with 12-month-old CRABI dummy (Part 572, Subpart R)
12. Suppression tests with newborn infant (Part 572, Subpart K)
13. Suppression tests with 3-year-old dummy (Part 572, Subpart P)
14. Suppression tests with 6-year-old dummy (Part 572, Subpart N)
15. Test of reactivation of the passenger air bag system with an unbelted 5th percentile female dummy
16. Low risk deployment test with 12-month-old dummy (Part 572, Subpart R)
17. Low risk deployment test with 3-year-old dummy (Part 572, Subpart P)
18. Low risk deployment test with 6-year-old dummy (Part 572, Subpart N)
19. Low risk deployment test with 5th female dummy (Part 572, Subpart O)
20. Impact Tests

Frontal Oblique

- Belted 50th male dummy driver and passenger (0 to 48 kmph) (S5.1.1(a))
- Unbelted 50th male dummy driver and passenger (0 to 48 kmph) (S5.1.2(a)(1))
- Unbelted 50th male dummy driver and passenger (32 to 40 kmph) (S5.1.2(a) (1) or S5.1.2(b))

Frontal 0°

- Belted 50th male dummy driver (0 to 48 kmph) (S5.1.1.(b)(1) or S5.1.1(a))
- Belted 50th male dummy passenger (0 to 48 kmph) (S5.1.1.(b)(1) or S5.1.1(a))
- Belted 5th female dummy driver (0 to 48 kmph) (S16.1(a))
- Belted 5th female dummy passenger (0 to 48 kmph) (S16.1(a))
- Belted 50th male dummy driver and passenger (0 to 56 kmph) (S5.1.1.(b)(2))
- Unbelted 50th male dummy driver and passenger (0 to 48 kmph) (S5.1.2(a) (1))
- Unbelted 50th male dummy driver (32 to 40 kmph) (S5.1.2.(a)(2) or S5.1.2(b))
- Unbelted 50th male dummy passenger (32 to 40 kmph) (S5.1.2.(a)(2) or S5.1.2(b))
For the crash tests, the vehicle was instrumented with 8 accelerometers. The accelerometer data from the vehicle and dummies were sampled at 10,000 samples per second and processed as specified in SAE J211/1 MAR95 and FMVSS 208, S4.13.

The dynamic tests were recorded using high speed film and high speed digital video.

The vehicle appears to meet the performance requirements to which it was tested with the exception of S4.5.1 Air Bag Labels.

SECTION 4
DISCUSSION OF TESTS

Test Vehicle: 2004 Dodge Durango
Test Program: FMVSS 208 Compliance
NHTSA No.: C40303
Test Dates: 1/26-4/1/04

The vehicle did not meet the performance requirements of S.4.5.1 Air Bag Labels.

A blanket and visor were not used in the suppression testing because they did not affect the weight sensing system used on the vehicle.

Empty seat detection during Suppression testing was performed with the StarSCAN diagnostic tool.

The Cosco Dream Ride Car Bed would not fit at the forward and middle seat slide positions due to interference with the center console.

There were no 5th percentile Position 2 Low Risk Deployment high speed video views due to a camera software malfunction.

The 3-year-old Position 2 Low Risk Deployment front high speed video view had a double image due to a camera software malfunction.

The passenger air bag for the 6-year-old Position 2 Low Risk Deployment on 2-26-04 was replaced on site by MGA associates under the direction of NHTSA and DaimlerChrysler representatives.

The test vehicle fuel system was filled to 95.2% (97.3 liters, 25.7 gallons).

A 50th percentile dummy (SN 401) was positioned as a Center Rear Passenger (CRP) during the 25 mph frontal crash test. The CRP seat back translated forward from its locked position during the event. The CRP headrest became detached. MHD sensors were attached to the CRP seat back to record angular rotation.

The CRP Neck My signal was clipped at 141 ms at a magnitude of 501.7 nm. This occurred for approximately 4 ms and was an over-range condition. It did not affect the Nij calculations.

The CRP shoulder belt provided No Valid Data after 100 ms.

There were no other unexpected events or items to discuss.
SECTIO N 5
TEST DATA SHEETS

Test Vehicle: 2004 Dodge Durango
Test Program: FMVSS 208 Compliance
NHTSA No.: C40300
Test Dates: 1/25-4/1/04
DATA SHEET 1
COTR VEHICLE WORK ORDER

Test Vehicle: 2004 Dodge Durango  
Test Program: FMVSS 208 Compliance  
NHTSA No.: C403303  
Test Dates: 1/25-4/1/04

COTR Signature: Charles R. Case

Test to be performed for this vehicle are checked below:

1. Rear Outboard Seating Position Seat Belts (S4.1.2(b)) & (S4.2.4)
2. Air Bag Labels (S4.5.1)
3. Readiness Indicator (S4.5.2)
4. Passenger Air Bag Manual Cut-off Device (S4.5.4)
5. Lap Belt Lockability (S7.1.1.5)
6. Seat Belt Warning System (S7.3)
7. Seat Belt Contact Force (S7.4.4)
8. Seat Belt Release Plate Access (S7.4.4)
9. Seat Belt Retraction (S7.4.5)
10. Seat Belt Guides and Hardware (S7.4.6)
11. Suppression tests with 12-month-old CRABI dummy (Part 572, Subpart R) using the following indicated child restraints.

PURCHASE PRICE: ($) 27,405.00
DEALER'S NAME: Hub West Dodge Chrysler, 2838 Main St. East Troy, WI 53120

A. All options listed on window sticker are present on the test vehicle:
   X Yes    No
B. Tires and wheel rims are new and the same as listed:
   X Yes    No
C. There are no dents or other interior or exterior flaws:
   X Yes    No
D. The vehicle has been properly prepared and is in running condition:
   X Yes    No
E. Keyless remote is available and working:
   X Yes    X No
F. The glove box contains an owner's manual, warranty document, consumer information, and extra set of keys:
   X Yes    No
G. Proper fuel filler cap is supplied on the test vehicle:
   X Yes    No
H. Using permanent marker, identify vehicle with NHTSA number and FMVSS test type(s) on roofline above driver door or for school buses, place a placard with NHTSA number inside the windshield and to the exterior front and rear side of bus:
   X Yes    No
I. Place vehicle in storage area:
   X Yes    No
J. Inspect the vehicle's interior and exterior, including all windows, seats, doors, etc. to confirm that each system is complete and functional per the manufacturer's specifications. Any damage, misadjustment, or other unusual condition that could influence the test program or test results shall be recorded. Report any abnormal condition to the NHTSA COTR before beginning any test:
   X Vehicle OK    Conditions reported below
REPORT OF VEHICLE CONDITION AT THE COMPLETION OF TESTING

LIST OF FMVSS TESTS PERFORMED BY THIS LAB:  FMVSS 208, 212, 219, 301
VEHICLE:  2004 DODGE DURANGO MPV  NHTSA NO.  C40303
REMARKS:

Equipment that is no longer on the test vehicle as noted on previous page:
LH rear window glass, RH rear tail light, hub covers, and third row seats.

Explanation for equipment removal:
Components removed for instrumentation installation and to meet target weight.

Test Vehicle Condition:
25 mph frontal impact damage- front suspension & structure damaged, hood & front quarter
panels damaged, radiator damaged, air bags & pretensioners deployed, Stoddard in fuel system

RECORDED BY:  Jeff Lewandowski  DATE:  4/8/2004
APPROVED BY:  David Winkelbauer  DATE:  4/8/2004

AIR BAG LABELS (S4.5.1)

Test Vehicle: 2004 Dodge Durango  NHTSA No.: C40303
Test Program: FMVSS 208 Compliance  Test Date: 1/28/04
Test Technician: Wayne Dahike

1. Air bag maintenance label and owner's manual instructions: (S4.5.1(a))
   1.1 Does the manufacturer recommend periodic maintenance or replacement of the air bag?
      □ Yes, go to 1.2
      X No – go to 2
   1.2 Does the vehicle have a label specifying air bag maintenance or replacement?
      □ Yes – Pass
      □ No – Fail
   1.3 Does the label contain one of the following?
      □ Yes – Pass
      □ No – Fail
      Check applicable schedule:
      □ Schedule on label specifies month and year (Record date_______)
      □ Schedule on label specified vehicle mileage (Record mileage_______)
      □ Schedule on label specifies interval measured from date on certification label
      (Record Interval_______)
   1.4 Is the label permanently affixed within the passenger compartment such that it cannot be removed without destroying or defacing the label or the surround?
      □ Yes – Pass
      □ No – Fail
   1.5 Is the label lettered in English?
      □ Yes – Pass
      □ No – Fail
   1.6 Is the label in block capitals and numerals?
      □ Yes – Pass
      □ No – Fail
   1.7 Are the letters and numerals at least 3/32 inches high?
      □ Yes – Pass
      □ No – Fail
   1.8 Does the owner's manual set forth the recommended schedule for maintenance or replacement?
   2. Does the owner's manual: (S4.5.1(f))
   2.1 Include a description of the vehicle's air bag system in an easily understandable format?
      X Yes – Pass
      □ No – Fail
   2.2 Include a statement that the vehicle is equipped with an air bag and a lap/shoulder belt at the front outboard seating position?
      X Yes – Pass
2.3 Include a statement that the air bag is a supplement restraint at the front outboard seating position?
- Yes – Pass
- No – Fail

2.4 Emphasize that all occupants, including the driver, should always wear their seat belts whether or not an air bag is also provided at their seating positions to minimize the risk of severe injury or death in the event of a crash?
- Yes – Pass
- No – Fail

2.5 Provide any necessary precautions regarding the proper positioning of occupants, including children, at seating positions equipped with air bags to ensure maximum safety protection for those occupants?
- Yes – Pass
- No – Fail

2.6 Explain that no objects should be placed over or near the air bag on the steering wheel or on the instrument panel, because any such objects could cause harm if the vehicle is in a crash severe enough to cause the air bag to inflate?
- Yes – Pass
- No – Fail

2.7 Is the vehicle certified to meet the requirements of S14.5, S15, S17, S19, S21, S23, and S25? (Obtain answer from COTR) (S4.5.1(f)(2))
- Yes – (Go to 2.7.1)
- No – (Go to 3.)

2.7.1 Explain the proper functioning of the advanced air bag system? (S4.5.1(f)(2))
- Yes – Pass
- No – Fail

2.7.2 Provide a summary of the actions that may affect the proper functioning of the system? (S4.5.1(f)(2))
- Yes – Pass
- No – Fail

2.7.3 Present and explain the main components of the advanced passenger air bag system? (S4.5.1(f)(2)(i))
- Yes – Pass
- No – Fail

2.7.4 Explain how the components function together as part of the advanced passenger air bag system? (S4.5.1(f)(2)(ii))
- Yes – Pass
- No – Fail

2.7.5 Contain the basic requirements for proper operation, including an explanation of the actions that may affect the proper functioning of the system? (S4.5.1(f)(2)(iii))
- Yes – Pass
- No – Fail

2.7.6 Is the vehicle certified to the requirements of S19.2, S21.2, or 23.2 (automatic suppression)?
- Yes, continue with 2.7.6
- No, go to 2.7.7
2.7.6.1 Contain a complete description of the passenger air bag suppression system installed in the vehicle, including a discussion of any suppression zone? (S4.5.1(f)(2)(iv))

X Yes - Pass

X No - Fail

2.7.6.2 Discuss the telltale light, specifying its location in the vehicle and explaining when the light is illuminated?

X Yes - Pass

X No - Fail

2.7.7 Explain the interaction of the advanced passenger air bag system with other vehicle components, such as seat belts, seats or other components? (S4.5.1(f)(2)(v))

X Yes - Pass

X No - Fail

2.7.8 Summarize the expected outcomes when child restraint systems, children and small teenagers or adults are both properly and improperly positioned in the passenger seat, including cautionary advice against improper placement of child restraint systems? (S4.5.1(f)(2)(vi))

X Yes - Pass

X No - Fail

2.7.9 Provide information on how to contact the vehicle manufacturer concerning modifications for persons with disabilities that may affect the advanced air bag system? (S4.5.1(f)(2)(vii))

X Yes - Pass

X No - Fail

3. Sun Visor Air Bag Warning Label (S4.5.1(b)) Check only one of the following:

☐ The vehicle is not certified to meet the requirements of S19, S21, and S23 (Obtain answer from CDTR) (S4.5.1(b)(1)) Go to 3.1 and skip 3.2 and 3.3

☐ The vehicle is certified to meet the requirements of S19, S21, and S23 before 9/1/03. (Obtain answer from CDTR) (S4.5.1(b)(2)) Go to 3.2 and skip 3.1 and 3.3

X The vehicle is certified to meet the requirements of S19, S21, and S23 on 9/1/03 or later. (Obtain answer from CDTR) (S4.5.1(b)(3)) Go to 3.3 and skip 3.1 and 3.2

3.1 Vehicles not certified to meet the requirements of S19, S21, and S23.

3.1.1 Is the label permanently affixed (including permanent marking on the visor material or molding into the visor material) to either side of the sun visor at each front outboard seating position such that it cannot be removed without destroying or defacing it? (S4.5.1(b)(1))

☐ Driver Side, Yes - Pass

☐ Driver Side, No - Fail

☐ Passenger Side, Yes - Pass

☐ Passenger Side, No - Fail

3.1.2 Does the label conform in content to the label shown in either Figure 6A or 6B (Figure 6b is for vehicles with passenger air bag on-off switches), as appropriate, at each front outboard seating position? (S4.5.1(b)(1)) (Vehicles without back seats may omit the statement: "The back seat is the safest place for children." (S4.5.1(b)(1)(iv))

20
3.1.3 Is the label heading area yellow with the word "WARNING" and the alert symbol in black? (§4.5.1(b)(1)(i))

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

3.1.4 Is the message area white with black text? (§4.5.1(b)(1)(ii))

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

3.1.5 Is the message area at least 30 cm²? (§4.5.1(b)(1)(ii))

- Driver Side: Length ________, Width ________
- Passenger Side: Length ________, Width ________
- Actual message area ________ cm²
3.16 Is the pictogram black with a red circle and slash on a white background? (S4.5.1(b)(2)(ii))

- Driver Side, Yes - Pass
- Driver Side, No - Fail
- Passenger Side, Yes - Pass
- Passenger Side, No - Fail

3.17 Is the pictogram at least 30 mm in diameter? (S4.5.1(b)(2)(iii))

- Driver Side, Yes - Pass
- Driver Side, No - Fail
- Passenger Side, Yes - Pass
- Passenger Side, No - Fail

3.2 Vehicles certified to meet the requirements of S19, S21, and S23 before 9/1/03.

3.2.1 Is the label permanently affixed (including permanent marking on the visor material or molding into the visor material) to either side of the sun visor at each front outboard seating position such that it cannot be removed without destroying or defacing the label or the sun visor? (S4.5.1(b)(2))

- Driver Side, Yes - Pass
- Driver Side, No - Fail
- Passenger Side, Yes - Pass
- Passenger Side, No - Fail

3.2.2 Does the label conform in content to the label shown in either Figure 8 or 11 at each front outboard seating position? (S4.5.1(b)(2)) (Vehicles without back seats may omit the statement: "The back seat is the safest place for children." (S4.5.1(b)(2)(iv))

- Driver Side, Yes - Pass
- Driver Side, No - Fail
- Passenger Side, Yes - Pass
- Passenger Side, No - Fail

- [ ] Driver Side, Yes – Pass
- [ ] Driver Side, No – Fail
- [ ] Passenger Side, Yes – Pass
- [ ] Passenger Side, No – Fail

### 3.2.7 Is the pictogram at least 30 mm (1.2 inches) in length? (S4.5.1(b)(2)(iii))
- [ ] Driver Side: Length ________
- [ ] Passenger Side: Length ________
- [ ] Driver Side, Yes – Pass
- [ ] Driver Side, No – Fail
3.3 Vehicle certified to meet the requirements of S19, S21, and S23 on 9/1/03 and later. (S4.5.1(b)(3))

3.3.1 Is the label permanently affixed (including permanent marking on the visor material or molding into the visor material) to either side of the sun visor at each front outboard seating position such that it cannot be removed without destroying or defacing the label or the sun visor? (S4.5.1(b)(3))

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

3.3.2 Does the label conform in content to the label shown in either Figure 11 at each front outboard seating position? (S4.5.1(b)(2)) (Vehicles without back seats may omit the statement: “The back seat is the safest place for children.” (S4.5.1(b)(3)(iv)) Vehicles without back seats or the back seat is too small to accommodate a rear-facing child restraint may omit the statement “Never put a rear-facing child seat in the front.” (S4.5.1(b)(3)(v))

![WARNING](image)

Figure 11. Sun visor label Vehicle visor is in Down Position

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

3.3.3 Is the label heading area yellow with the word "WARNING" and the alert symbol in black? (S4.5.1(b)(3)(i))

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

3.3.4 Is the message area white with black text? (S4.5.1(b)(3)(ii))

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail
3.3.5 Is the message area at least 30 cm²? (S4.5.1(b)(3)(II))

Driver Side: Length 8.7 cm, Width 4.8 cm
Passenger Side: Length 8.7 cm, Width 4.8 cm
Driver Actual message area 41.76 cm²
Passenger Actual message area 41.76 cm²

X Driver Side, Yes – Pass
X Driver Side, No – Fail
X Passenger Side, Yes – Pass
X Passenger Side, No – Fail

3.3.6 Is the pictogram black on a white background? (S4.5.1(b)(3)(III))

X Driver Side, Yes – Pass
X Driver Side, No – Fail
X Passenger Side, Yes – Pass
X Passenger Side, No – Fail

3.3.7 Is the pictogram at least 30 mm (1.2 inches) in length? (S4.5.1(b)(3)(III))

Driver Side: Length 45 mm
Passenger Side: Length 45 mm

X Driver Side, Yes – Pass
X Driver Side, No – Fail
X Passenger Side, Yes – Pass
X Passenger Side, No – Fail

3.4 Is the same side of the sun visor that contains the air bag warning label free of other information with the exception of the air bag maintenance label and/or the rollover-warning label? (S4.5.1(b)(5)(I))

X Driver Side, Yes – Pass
X Driver Side, No – Fail
X Passenger Side, Yes – Pass
X Passenger Side, No – Fail

3.5 Is the sun visor free of other information about air bags or the need to wear seat belts with the exception of the air bag alert label and/or the rollover-warning label? (S4.5.1(b)(5)(II))

X Driver Side, Yes – Pass
X Driver Side, No – Fail
X Passenger Side, Yes – Pass
X Passenger Side, No – Fail

3.6 Does the driver side visor contain a rollover-warning label on the same side of the visor as the air bag warning label?

X Yes, go to 3.6.1

No, go to 4 (skipping 3.6.1 through 3.6.3)
3.6.1 Are both the rollover-warning label and the air bag warning label surrounded by a continuous solid-lined border?

☐ Yes, go to 3.6.2 and skip 3.6.3
☐ X No, go to 3.6.3 and skip 3.6.2

3.6.2 Is the shortest distance from the border of the rollover label to the border of the air bag warning label at least 1 cm? (576.105 (d)(1)(iv)(B))

☐ actual distance

3.6.3 Is the shortest distance from any of the lettering or graphics on the rollover-warning label to any of the lettering or graphics of the air bag warning label at least 3 cm? (576.105 (d)(1)(iv)(A))

17mm (1.7cm) actual distance

☐ Yes-Pass
☐ X No-FAIL

☐ 4. Air Bag Alert Label (54.5.1(c)) (A "Rollover Warning Label" or "Rollover Alert Label" may be on the same side of the driver’s sun visor as the "Air Bag Alert Label." 575.105(d))

☐ 4.1 Is the sun visor warning label visible when the sun visor is in the stowed position?

☐ X If yes for driver and passenger, go to 5.
☐ X Driver Side, Yes -- Pass
☐ Driver Side, No -- Fail
☐ X Passenger Side, Yes -- Pass
☐ Passenger Side, No -- Fail

☐ 4.2 Is the air bag alert label permanently affixed (including permanent marking on the visor material or molding into the visor material) to the sun visor at each front outboard seating position such that it cannot be removed without destroying or defacing the label or the sun visor? (54.5.1(c))

☐ Driver Side, Yes -- Pass
☐ Driver Side, No -- Fail
☐ Passenger Side, Yes -- Pass
☐ Passenger Side, No -- Fail

☐ 4.3 Is the air bag alert label visible when the visor is in the stowed position? (54.5.1(c))

☐ Driver Side, Yes -- Pass
☐ Driver Side, No -- Fail
☐ Passenger Side, Yes -- Pass
☐ Passenger Side, No -- Fail

☐ 4.4 Does the label conform in content to the label shown in Figure 6C? (54.5.1(c))

26

- Passenger Side, No – Fail

4.5 Is the message area black with yellow text? (S4.5.1(c)(1))
- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

4.6 Is the message area at least 20 cm²? (S4.5.1(c)(1))
- Driver Side: Length ______, Width ______
- Passenger Side: Length ______, Width ______
- Actual message area ______ cm²

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

4.7 Is the pictogram black with a red circle and slash on a white background? (S4.5.1(c)(2))
- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail

4.8 Is the pictogram at least 20 mm in diameter? (S4.5.1(c)(2))
- Driver Side Diameter ______ mm
- Passenger Side Diameter ______ mm

- Driver Side, Yes – Pass
- Driver Side, No – Fail
- Passenger Side, Yes – Pass
- Passenger Side, No – Fail
5. Label on the Dashboard

5.1 Is the vehicle certified to meet the requirements of S19, S21, and S23? (Obtain answer from COTR) (S4.5.1(3)(2))
   - X Yes, go to 5.1.1 and skip 5.2
   - No, go to 5.2, skipping 5.1.1 through 5.1.6
     - Driver Side, Yes - Pass
     - Driver Side, No - Fail
     - Passenger Side, Yes - Pass
     - Passenger Side, No - Fail

5.1.1 Does the vehicle have a label on the dash or steering wheel hub? (S4.5.1(e)(2))
   - X Yes - Pass
   - No - Fail

5.1.2 Is the label clearly visible from all front seating positions? (S4.5.1(e)(2))
   - X Yes - Pass
   - No - Fail

5.1.3 Does the label conform in content to the label shown in Figure 8? (S4.5.1(e)(2))
   Vehicles without back seats may omit the statement: "The back seat is the safest place for children." (S4.5.1(e)(2)(II))

5.1.4 Is the heading area yellow with black text? (S4.5.1(e)(2)(I))
   - X Yes - Pass
   - No - Fail

5.1.5 Is the message white with black text? (S4.5.1(e)(2)(II))
   - X Yes - Pass
   - No - Fail

5.1.6 Is the message area at least 30 cm²? (S4.5.1(e)(2)(II))
   - Length 6.7 cm, Width 3.5 cm
   - Actual message area 20.45 cm²

DATA SHEET 6
FMVSS 208 READINESS INDICATOR (34.5.2)

Test Vehicle: 2004 Dodge Durango  NHTSA No.: C40303
Test Program: FMVSS 208 Compliance  Test Date: 1/28/04
Test Technician: Wayne Dahlke

An occupant restraint system that deploys in the event of a crash shall have a monitoring system with a readiness indicator. A totally mechanical system is exempt from this requirement. (11/8/94 legal interpretation to Lawrence F. Hennagerger on behalf of Breed)

1. Is the system totally mechanical? If Yes, this data sheet is complete.
   X Yes
   X No

2. Describe the location of the readiness indicator. Left side of instrument cluster

3. Is the readiness indicator clearly visible to the driver?
   X Yes – Pass
   X No - Fail

4. Is a list of the elements in the occupant restraint system, being monitored by the readiness indicator, provided on a label or in the owner's manual?
   X Yes – Pass
   X No - Fail

5. Does the vehicle have an on-off switch for the passenger air bag?
   X If Yes, go to 6
   X If No, this form is complete.

6. Is the air bag readiness indicator off when the passenger air bag switch is in the off position?
   X Yes – Pass
   X No - Fail

REMARKS:

I certify that I have read and performed each instruction.

Signature: Wayne Dahlke

Date: 1/28/04
DATA SHEET 7

PASSenger Air Bag Manual Cut-off Device (S4.5.4)

Test Vehicle: 2004 Dodge Durango
Test Program: FMVSS 208 Compliance
Test Technician: Wayne Dahike
NHTSA No.: C40303
Test Date: 1/28/04

1. Is the vehicle equipped with an on-off switch that deactivates the air bag installed at the
right front outboard seating position?

☐ Yes, go to 2
☒ No, this sheet is complete

2. Does the vehicle have any forward-facing rear designated seating positions? (S4.5.4(a))

☐ Yes, go to 3
☐ No, go to 4

3. Verification of the lack of room for a child restraint in the rear seat behind the driver’s
seat. (S4.5.4(b))

☐ Position the seat’s adjustable lumbar supports so that the lumbar support is in its lowest,
retracted or deflated adjustment position (S8.1.3)

☐ N/A, no lumbar adjustment

☐ Position any adjustable parts of the seat that provide additional support so that they are
in the lowest or most open adjustment position. (S16.2.10.02)

☐ N/A, no additional support adjustment

☐ If the seat cushion adjusts fore and aft, independent of the seat back, set this adjustment
to the full rearward position. (S16.2.10.3.1)

☐ N/A, no independent fore-aft seat cushion adjustment

☐ If the seat cushion height adjusts independent of the seat back, set this adjustment to the
full down position (S16.2.10.3.1)

☐ N/A, no independent seat cushion height adjustment

☐ Put the seat in its full rearward position. (S16.2.10.3.1)

☐ N/A, the seat does not have a fore-aft adjustment

☐ If the seat height is adjustable, put it in the full down position. (S16.2.10.3.1)

☐ N/A, no seat height adjustment

☐ Draw a horizontal reference line on the side of the seat cushion.

☐ Using only the controls that change the seat in the fore-aft direction, mark the fore-aft
seat positions. Mark the side of the seat and a reference position directly below on a part
of the vehicle that does not adjust. For manual seats, move the seat forward one detent
at a time and mark each detent as was done for the full rearward position. For power
seats, mark only the full rearward, middle, and full forward positions. Label three of the
positions with the following: F for full forward, M for mid-position (if there is no mid
position, label the closest adjustment position to the rear of the mid-point), and R for full
rearward.

☐ N/A — the seat does not have a fore-aft adjustment.

☐ Using only the controls that change the seat in the fore-aft direction, place the seat in the
full rearward position and then place the seat in the middle fore-aft position. (S8.1.2)

☐ N/A — the seat does not have fore-aft adjustment.
3.10 If seat adjustments, other than fore-aft, are present and the horizontal reference line is no longer horizontal, use those adjustments to maintain the reference line as closely as possible to the horizontal.

3.11 The seat back angle, if adjustable, is set at the manufacturer's nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer. (S4.5.4.1 (b) and S8.1.3)

3.12 Is the driver seat a bucket seat?

- Yes, go to 3.12.1 and skip 3.12.2
- No, go to 3.12.2 and skip 3.12.1

3.12.1 Bucket Seats:

3.12.1.1 Locate and mark a vertical Plane B through the longitudinal centerline of the seat driver's seat cushion. (S22.2.1.3) The longitudinal centerline of a bucket seat cushion is determined at the widest part of the seat cushion. Measure perpendicular to the longitudinal centerline of the vehicle.

Distance (mm):
- Less than 720 mm – Pass
- More than 720 mm – Fail

3.12.2 Bench seats (including split bench seats):

3.12.2.1 Locate and mark a vertical Plane B through the center of the steering wheel parallel to the vehicle longitudinal centerline.

Distance (mm):
- Less than 720 mm – Pass
- More than 720 mm – Fail

4. Does the device turn the air bag on and off using the vehicle's ignition key? (S4.5.4.2)

- Yes – Pass
5. Is the on-off device separate from the ignition switch? (§4.5.4.2)
   - Yes - Pass
   - No - Fail

6. Is there a telltale light that comes on when the passenger air bag is turned off? (§4.5.4.2)
   - Yes - Pass
   - No - Fail

7. Telltale light (§4.5.4.3)
   7.1 Is the light yellow? §4.5.4.3(a))
      - Yes - Pass
      - No - Fail
   7.2 Are the words "PASSENGER AIR BAG OFF" (§4.5.4.3(b))
      on the telltale?
      - Yes - Pass, go to 7.3
      - No - go to 7.2.2
   7.2.2 within 25 mm of the telltale?
      Measurement from the edge of the telltale light (mm):
      - Yes - Pass
      - No - Fail
   7.3 Does the telltale remain illuminated while the air bag is turned off? (§4.5.4.3(c)) (Leave the air bag off for 5 minutes.)
      - Yes - Pass
      - No - Fail
   7.4 Is the telltale illuminated while the air bag is turned on? (§4.5.4.3(d))
      - Yes - Fail
      - No - Pass
   7.5 Is the telltale combined with the air bag readiness indicator? (§4.5.4.3(e))
      - Yes - Fail
      - No - Pass

   8.1 Does the owner's manual contain complete instructions on the operation of the on-off switch? (§4.5.4.4(a))
      - Yes - Pass
      - No - Fail
   8.2 Does the owner's manual contain a statement that the on-off switch should only be used when a member of one of the following risk groups is occupying the right front passenger seating position? (§4.5.4.4(b))
      Infants: there is no back seat
      the rear seat is too small to accommodate a child restraint
      there is a medical condition that must be monitored constantly
      Children there is no back seat
      aged space is not always available in the rear seat
      1 to 12: there is a medical condition that must be monitored constantly
      Medical condition: greater risk for harm than with the air bag on
8.3 Does the owner’s manual contain a warning about the safety consequences of using the on-off switch at other times?

☐ Yes — Pass
☐ No — Fail

REMARKS:

I certify that I have read and performed each instruction.

DATA SHEET 8

LAP BELT LOCKABILITY
Passenger cars, trucks, buses, and multipurpose passenger
Vehicles with a GVWR of 10,000 pounds or less. (S7.1.1.5)

Test Vehicle: 2004 Dodge Durango  
NHTSA No.: C40303
Test Program: FMVSS 208 Compliance  
Test Date: 1/28/04
Test Technician: Wayne Dahlke

Complete one of these forms for each designated seating position that can be adjusted to
forward-facing or that is a forward-facing seat, other than the driver's seat (S7.1.1.5(a), and that
has seat belt retractors that are not solely automatic locking retractors. (S7.1.1.5(c))

DESIGNATED SEATING POSITION: Front Passenger

☐ N/A – no retractor is at this position
☐ N/A – the retractor is an automatic locking retractor ONLY
☒ 1. Record test fore-aft seat position: Full Aft
   (S7.1.1.5(c)(1)) (Any position is acceptable)
☒ 2. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be
   adjusted to forward-facing consist of a locking device that does NOT have to be attached
   by the vehicle user to the seat belt webbing, retractor, or any other part of the vehicle.
   (S7.1.1.5 (e))
☒ Yes – Pass
☐ No – Fail
☒ 3. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be
   adjusted to forward-facing consist of a locking device that does NOT require inverting,
   twisting or deforming of the belt webbing. (S7.1.1.5 (e))
☒ Yes – Pass
☐ No – Fail
☒ 4. Buckle the seat belt. (S7.1.1.5(c)(1))
☒ 5. Locate a reference point A on the seat belt buckle. (S7.1.1.5(c)(2))
☒ 6. Locate a reference point B on the attachment hardware or retractor assembly at the
   other end of the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))
☒ 7. Does the vehicle user need to take some action to activate the locking feature on the lap
   belt portion of the seat belt in any forward-facing seat or seat that can be adjusted to
   forward-facing?
☒ Yes, go to 7.1
☐ No, go to 8
☒ 7.1 Does the vehicle owner’s manual include a description in words and/or diagrams
   describing how to activate the locking feature so that the seat belt assembly can tightly
   secure a child restraint system and how to deactivate the locking feature to remove the
   child restraint system. (S7.1.1.5(b))
☒ Yes – Pass
☐ No – Fail
☒ 8. Adjust the lap belt or lap belt portion of the seat belt assembly according to any
   procedures recommended in the vehicle owner’s manual to activate any locking feature
   so that the webbing between points A and B is at the maximum length allowed by the
   belt system. (S7.1.1.5(c)(2) & S7.1.1.5(c)(1))
9. Measure and record the distance between points A and B along the longitudinal centerline of the webbing for the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.6(c)(2))

Measured distance between A and B (inches): 56 1/4

10. Readjust the belt system so that the webbing between points A and B is at any length that is 5 inches or more shorter than the maximum length of the webbing. (S7.1.1.5(c)(3))

11. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

Measured force application angle (Spec: 5-15 degrees): 10.5

12. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

Measured distance between A and B (inches): 25 1/8

13. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractor are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

Record onset rate (lb/sec) (Spec: 10 to 60 lb/sec) (S7.1.1.5(c)(5)): 40

Measured distance between A and B (inches) (S7.1.1.5(c)(6)): 25 3/8

14. Subtract the measurement in 13 from the measurement in 12. Is the difference 2 inches or less? (S7.1.1.5(c)(7))

13 - 12 = 1/4

Yes - Pass

No - Fail

15. Subtract the measurement in 9 from the measurement in 13. Is the difference 3 inches or more? (S7.1.1.5(c)(8))

9 - 13 = 30 7/8

Yes - Pass

No - Fail

DATA SHEET 6

LAP BELT LOCKABILITY

Passenger cars, trucks, buses, and multipurpose passenger Vehicles with a GVWR of 10,000 pounds or less. (57.1.1.5)

Test Vehicle: 2004 Dodge Durango  
NHTSA No.: C403983  
Test Program: FMVSS 208 Compliance  
Test Date: 1/28/04  
Test Technician: Wayne Dahlke

Complete one of these forms for each designated seating position that can be adjusted to forward-facing or that is a forward-facing seat, other than the driver's seat (57.1.1.5(a)), and that has seat belt retractors that are not solely automatic locking retractors. (57.1.1.5(c))

DESIGNATED SEATING POSITION: Left Third Row Passenger

☐ N/A – no retractor is at this position
☒ N/A – the retractor is an automatic locking retractor ONLY

1. Record test forward seat position: Not Adjustable (57.1.1.5(c)(1)) (Any position is acceptable)

☒ 2. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT have to be attached by the vehicle user to the seat belt webbing, retractor, or any other part of the vehicle. (57.1.1.5(e))
☒ Yes – Pass
☐ No – Fail

☒ 3. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT require inverting, twisting or deforming of the belt webbing. (57.1.1.5(e))
☒ Yes – Pass
☐ No – Fail

☒ 4. Buckle the seat belt. (57.1.1.5(c)(1))

☒ 5. Locate a reference point A on the seat belt buckle. (57.1.1.5(c)(2))

☒ 6. Locate a reference point B on the attachment hardware or retractor assembly at the other end of the lap belt or lap belt portion of the seat belt assembly. (57.1.1.5(c)(2))

☒ 7. Does the vehicle user need to take some action to activate the locking feature on the lap belt portion of the seat belt in any forward-facing seat or seat that can be adjusted to forward-facing?
☒ Yes, go to 7.1
☐ No, go to 6

☒ 7.1 Does the vehicle owner’s manual include a description in words and/or diagrams describing how to activate the locking feature so that the seat belt assembly can tightly secure a child restraint system and how to deactivate the locking feature to remove the child restraint system. (57.1.1.5(b))
☒ Yes – Pass
☐ No – Fail

☒ 8. Adjust the lap belt or lap belt portion of the seat belt assembly according to any procedures recommended in the vehicle owner’s manual to activate any locking feature so that the webbing between points A and B is at the maximum length allowed by the belt system. (57.1.1.5(c)(2) & 57.1.1.5(c)(1))

43
9. Measure and record the distance between points A and B along the longitudinal centerline of the webbing for the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))

   Measured distance between A and B (inches): 59

10. Readjust the belt system so that the webbing between points A and B is at any length that is 5 inches or more shorter than the maximum length of the webbing. (S7.1.1.5(c)(3))

11. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 5. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

   Measured force application angle (Spec. 5-15 degrees): 8

12. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

   Measured distance between A and B (inches): 38 1/2

13. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractor are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

   Record onset rate (lb/sec) (Spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5)): 40

   Measured distance between A and B (inches) (S7.1.1.5(c)(6)): 37

14. Subtract the measurement in 13 from the measurement in 12. Is the difference 2 inches or less? (S7.1.1.5(c)(7))

   13 - 12 = 1/2

   Yes - Pass
   No - Fail

15. Subtract the measurement in 8 from the measurement in 13. Is the difference 3 inches or more? (S7.1.1.5(c)(8))

   9 - 13 = 22

   Yes - Pass
   No - Fail

REMARKS:

I certify that I have read and performed each instruction.

LAP BELT LOCKABILITY

Passenger cars, trucks, buses, and multipurpose passenger vehicles with a GVWR of 10,000 pounds or less. (57.1.1.5)

Test Vehicle: 2004 Dodge Durango
Test Program: FMVSS 208 Compliance
Test Technician: Wayne Dahlske

NHTSA No.: C49203
Test Date: 1/28/04

Complete one of these forms for each designated seating position that can be adjusted to forward-facing or that is a forward-facing seat, other than the driver's seat (57.1.1.5(a)), and that has seat belt retractors that are not solely automatic locking retractors. (57.1.1.5(c))

**DESIGNATED SEATING POSITION:** Right Third Row Passenger

1. N/A - no retractor is at this position
   N/A - the retractor is an automatic locking retractor ONLY

   Record test fore-aft seat position: Not Adjustable (57.1.1.5(c)(1)) (Any position is acceptable)

   X Yes - Pass
   No - Fail

2. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT have to be attached by the vehicle user to the seat belt webbing, retractor, or any other part of the vehicle. (57.1.1.5(a))

   X Yes - Pass
   No - Fail

3. Does the lap belt portion of the seat belt in the forward-facing seat or seat that can be adjusted to forward-facing consist of a locking device that does NOT require installing, twisting or deforming of the belt webbing. (57.1.1.5(a))

   X Yes - Pass
   No - Fail

4. Buckle the seat belt. (57.1.1.5(c)(1))

5. Locate a reference point A on the seat belt buckle. (57.1.1.5(c)(2))

6. Locate a reference point B on the attachment hardware or retractor assembly at the other end of the lap belt or lap belt portion of the seat belt assembly. (57.1.1.5(c)(2))

7. Does the vehicle user need to take some action to activate the locking feature on the lap belt portion of the seat belt in any forward-facing seat or seat that can be adjusted to forward-facing?

   X Yes, go to 7.1
   No, go to B

7.1 Does the vehicle owner's manual include a description in words and/or diagrams describing how to activate the locking feature so that the seat belt assembly can tightly secure a child restraint system and how to deactivate the locking feature to remove the child restraint system. (57.1.1.5(b))

   X Yes - Pass
   No - Fail

8. Adjust the lap belt or lap belt portion of the seat belt assembly according to any procedures recommended in the vehicle owner's manual to activate any locking feature so that the webbing between points A and B is at the maximum length allowed by the belt system. (57.1.1.5(c)(2) & 57.1.1.5(c)(1))

45
9. Measure and record the distance between points A and B along the longitudinal centerline of the webbing for the lap belt or lap belt portion of the seat belt assembly. (S7.1.1.5(c)(2))

Measured distance between A and B (Inches): 58 1/2

10. Readjust the belt system so that the webbing between points A and B is at any length that is 6 inches or more shorter than the maximum length of the webbing. (S7.1.1.5(c)(3))

11. To the lap belt or lap belt portion of the seat belt assembly, apply a preload of 10 pounds using the webbing tension pull device in Figure 6. Apply the load in a vertical plane parallel to the longitudinal axis of the vehicle and passing through the seating reference point of the designated seating position. Apply the preload in a horizontal direction toward the front of the vehicle with a force application angle of not less than 5 degrees nor more than 15 degrees above the horizontal. (S7.1.1.5(c)(4))

Measured force application angle (Spec. 5-15 degrees): 5.6

12. Measure the length between points A and B along the longitudinal centerline of the webbing while the preload is being applied. (S7.1.1.5(c)(4))

Measured distance between A and B (Inches): 47

13. Increase the load to 50 pounds at a rate of no more than 50 pounds per second. Attain the load in not more than 5 seconds. (If webbing sensitive emergency locking retractors are installed as part of the lap belt or lap belt portion of the seat belt assembly, apply the load at a rate less than the threshold value for lock-up specified by the manufacturer.) Maintain the load for at least 5 seconds. Measure and record the distance between points A and B along the longitudinal centerline of the webbing. (S7.1.1.5(c)(5))

Record onset rate (lb/sec) (spec. 10 to 50 lb/sec) (S7.1.1.5(c)(5)): 15

Measured distance between A and B (Inches) (S7.1.1.5(c)(6)): 47 1/4

14. Subtract the measurement in 13 from the measurement in 12. Is the difference 2 inches or less? (S7.1.1.5(c)(7))

13 - 12 = 1/4

Yes – Pass

No – Fail

15. Subtract the measurement in 9 from the measurement in 13. Is the difference 3 inches or more? (S7.1.1.6(c)(8))

9 - 13 = 11 1/4

Yes – Pass

No – Fail

Date: 1/28/04
DATA SHEET 10
BELT CONTACT FORCE (S7.4.3)

Test Vehicle: 2004 Dodge Durango  
Test Program: FMVSS 208 Compliance  
Test Technician: Wayne Dahike  
NHTSA No.: C40303  
Test Date: 1/26/04

Test all Type 2 seat belts other than those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

DESIGNATED SEATING POSITION: Left Front Driver

1. Does the vehicle incorporate a webbing tension-relieving device?
   - No, continue with this check sheet

2. Position the seat's adjustable lumbar support so that the lumbar support is in its lowest, retracted or deflected adjustment position. (S8.1.3)
   - N/A, no lumbar adjustment

3. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   - N/A, no additional support adjustment

4. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   - N/A, no independent fore-aft seat cushion adjustment

5. If the seat cushion adjusts fore and aft, independent of the seat back, set this adjustment to the full rearward position. (S16.2.10.3.1)
   - N/A, no independent seat cushion height adjustment

6. Put the seat in its full rearward position. (S16.2.10.3.1)
   - N/A, the seat does not have a fore-aft adjustment

7. If the seat cushion height adjusts independent of the seat back, set this adjustment to the full down position. (S16.2.10.3.1)
   - N/A, no seat height adjustment

8. Draw a horizontal reference line on the side of the seat cushion.

9. Using only the controls that change the seat in the fore-aft direction, mark the fore-aft seat positions. Mark the side of the seat and a reference position directly below on a part of the vehicle that does not adjust. For manual seats, move the seat forward one dentat at a time and mark each dentat as was done for the full rearward position. For power seats, mark only the full rearward, middle, and full forward positions.

   Label three of the positions with the following: F for full forward, M for mid-position (if there is no mid position, label the closest adjustment position to the rear of the midpoint), and R for full rearward.

   - N/A, the seat does not have a fore-aft adjustment

10. Using only the controls that change the seat in the fore-aft direction, place the seat in the full rearward position and then place the seat in the middle fore-aft position for this test. (S8.1.2)
Mid position

If there is no mid position, put the seat in the closest adjustment position to the rear of the midpoint. Describe the location of the seat:

☐ N/A, no adjustments

Reference line angle as tested: Zero

12. The seat back angle, if adjustable, is set at the manufacturer's nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer. (S16.2.10.3.2.1)

☐ N/A, no seat back angle adjustment

Manufacturer's design seat back angle: 12

Tested seat back angle: 12

13. Position the test dummies according to dummy position placement instructions in Appendix B and include the positioning check sheets.

14. Fasten the seat belt latch.

15. Pull either 12 inches of belt webbing or the maximum available amount of belt webbing, whichever is less, from the retractor and then release it, allowing the belt webbing to return to the dummy's chest.

16. Locate the point where the centerline of the upper torso belt webbing crosses the midsagittal line on the dummy's chest. At that point pull the belt webbing out 3 inches from the dummy's chest and release until it is within one inch from the dummy's chest. (S10.8) Using a force measuring gage with a full scale range of no more than 1.5 pounds, measure the contact force perpendicular to the dummy's chest exerted by the belt webbing.

Contact Force (lb): 0.56

☐ 0.0 to 0.7 pounds – Pass
☐ Greater than 0.7 pounds – Fail

REMARKS:

I certify that I have read and performed each instruction.

DATA SHEET 10
BELT CONTACT FORCE (S7.4.3)

Test Vehicle: 2004 Dodge Durango
Test Program: FMVSS 208 Compliance
Test Technician: Wayne Dahlke
NHTSA No.: C40303
Test Date: 1/28/04

Test all Type 2 seat belts other than those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

DESIGNATED SEATING POSITION: Right Rear Passenger

1. Does the vehicle incorporate a webbing tension-relieving device?
   [X] Yes, this form is complete
   [X] No, continue with this check sheet

2. Position the seat's adjustable lumbar supports so that the lumbar support is in its lowest, retracted or deflated adjustment position. (S8.1.5)
   [X] N/A, no lumbar adjustment

3. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   [X] N/A, no additional support adjustment

4. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   [X] N/A, no independent fore- aft seat cushion adjustment

5. If the seat cushion adjusts fore and aft, independent of the seat back, set this adjustment to the full rearward position. (S16.2.10.3.1)
   [X] N/A, no independent seat cushion height adjustment

6. Put the seat in its full rearward position. (S16.2.10.3.1)

7. If the seat cushion height adjusts independent of the seat back, set this adjustment to the full down position. (S16.2.10.3.1)
   [X] N/A, no seat height adjustment

8. Draw a horizontal reference line on the side of the seat cushion.

9. Using only the controls that change the seat in the fore-aft direction, mark the fore-aft seat positions. Mark the side of the seat and a reference position directly below on a part of the vehicle that does not adjust. For manual seats, move the seat forward one detent at a time and mark each detent as was done for the full rearward position. For power seats, mark only the full rearward, middle, and full forward positions. Label three of the positions with the following: F for full forward, M for mid-position (if there is no mid position, label the closest adjustment position to the rear of the midpoint); and R for full rearward.

   [X] N/A, the seat does not have a fore-aft adjustment

10. Using only the controls that change the seat in the fore-aft direction, place the seat in the full rearward position and then place the seat in the middle fore-aft position for this test. (S8.1.2)
Mid position

If there is no mid position, put the seat in the closest adjustment position to the rear of the midpoint. Describe the location of the seat: Not adjustable.

11. If seat adjustments other than fore-aft are present and the horizontal reference line is no longer horizontal, use those adjustments to maintain the reference line as closely as possible to the horizontal. (§16.2.10.3.2.1)

X N/A, no adjustments

Reference line angle as tested: N/A

12. The seat back angle, if adjustable, is set at the manufacturer's nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer. (§4.5.4.1 (b) and SB.1.3)

X N/A, no seat back angle adjustment

Manufacturer's design seat back angle:

 Tested seat back angle:

13. Position the test dummies according to dummy position placement instructions in Appendix B and include the positioning check sheets.

14. Fasten the seat belt latch.

15. Pull either 12 inches of belt webbing or the maximum available amount of belt webbing, whichever is less, from the retractor and then release it, allowing the belt webbing to return to the dummy's chest.

16. Locate the point where the centerline of the upper torso belt webbing crosses the midsagittal line on the dummy's chest. At that point pull the belt webbing out 3 inches from the dummy's chest and release until it is within one inch from the dummy's chest. (§10.8) Using a force measuring gage with a full scale range of no more than 1.5 pounds, measure the contact force perpendicular to the dummy's chest exerted by the belt webbing.

X Contact Force (lb): 0.5

X 0.0 to 0.7 pounds – Pass

Greater than 0.7 pounds – Fail

REMARKS:

I certify that I have read and performed each instruction.

LATCH PLATE ACCESS (S7.4.4)

Test Vehicle: 2004 Dodge Durango
Test Program: FMVSS 208 Compliance
Test Technician: Wayne Dahlke
NHTSA No.: C40393
Test Date: 1/28/04

Test all front outboard seat belts other than those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

DESIGNATED SEATING POSITION: Left Front Driver

1. Position the seat’s adjustable lumbar supports so that the lumbar support is in its lowest, retracted or deflated adjustment position. (S1.3)
   X
   □ N/A, no lumbar adjustment

2. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   X
   □ N/A, no additional support adjustment

3. If the seat cushion adjusts fore and aft, independent of the seat back, set this adjustment to the full rearward position. (S16.2.10.3.1)
   X
   □ N/A, no independent fore-and-aft seat cushion adjustment

4. If the seat cushion height adjusts independent of the seat back, set this adjustment to the full down position. (S16.2.10.3.1)
   X
   □ N/A, no independent seat cushion height adjustment

5. Put the seat in its full rearward position. (S16.2.10.3.1)
   X
   □ N/A, the seat does not have a fore-and-aft adjustment

6. If the seat height is adjustable, put it in the full down position. (S16.2.10.3.1)
   X
   □ N/A, no seat height adjustment

7. Draw a horizontal reference line on the side of the seat cushion.
   X
   X

8. Using only the controls that change the seat in the fore-and-aft direction, mark the fore-and-aft seat positions. Mark the side of the seat and a reference position directly below on a part of the vehicle that does not adjust. For manual seats, move the seat forward one detent at a time and mark each detent as was done for the full rearward position. For power seats, mark only the full rearward, middle, and full forward positions. Label three of the positions with the following: F for full forward, M for mid-position (if there is no mid position, label the closest adjustment position to the rear of the mid-point), and R for full rearward.
   □ N/A, the seat does not have a fore-and-aft adjustment.

9. Using only the controls that change the seat in the fore-and-aft direction, place the seat in the full rearward position and then place the seat in the forward most fore-and-aft position for this test. (S10.7)
   X

10. If seat adjustments, other than fore-and-aft, are present and the horizontal reference line is no longer horizontal, use these adjustments to maintain the reference line as closely as possible to the horizontal.
    □ N/A, no adjustments
11. The seat back angle, if adjustable, is set at the manufacturer's nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer. (94.5.4.1 (b) and 88.1.3) 

☐ N/A, no seat back angle adjustment

Manufacturer's design seat back angle: 12

Tested seat back angle: 12

12. Position the test dummy using the procedures in Appendix A. (Some modifications to the positioning procedure may need to be made because the seat is in its forward most position. Note on the Appendix A positioning check sheet any deviations necessary to position the Part 572, Subpart E dummy.) Include the positioning check sheet with this form.

13. Position the adjustable seat belt anchorage in the manufacturer's nominal design position for a 50th percentile adult male occupant.

14. Attach the inboard reach string to the base of the head following the instructions on Figure 3.

15. Attach the outboard reach string to the torso sheath following the instructions on Figure 3.

16. Place the latch plate in the stowed position.

17. Extend inboard reach string in front of the dummy and then backward and outboard to the latch plate to generate an arc of the reach envelope of the test dummy's arms. Is the latch plate within the reach envelope?

☐ Yes - Pass

☐ No

18. Extend outboard reach string in front of the dummy and then backward and outboard to the latch plate to generate an arc of the reach envelope of the test dummy's arms. Is the latch plate within the reach envelope?

☐ Yes - Pass

☐ No

19. Is the latch plate within the inboard (Item 17) or outboard (Item 18) reach envelope?

☐ Yes - Pass

☐ No - Fail

20. Using the clearance test block, specified in Figure 4, is there sufficient clearance between the vehicle seat and the side of vehicle interior to allow the test block to move unhindered to the latch plate or buckle?

☐ Yes - Pass

☐ No - Fail

1. Is the vehicle a passenger car or walk-in van-type vehicle?
   - [X] Yes, this form is complete
   - [X] No

2. Position the seat's adjustable lumbar supports so that the lumbar support is in its lowest, retracted or deflated adjustment position. (S6.1.3)
   - [X] N/A, no lumbar adjustment

3. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   - [X] N/A, no additional support adjustment

4. If the seat cushion adjusts fore and aft, independent of the seat back, set this adjustment to the full rearward position. (S16.2.10.3.1)
   - [X] N/A, no independent fore-aft seat cushion adjustment

5. If the seat cushion height adjusts independent of the seat back, set this adjustment to the full down position. (S16.2.10.3.1)
   - [X] N/A, no independent seat cushion height adjustment

6. Put the seat in its full rearward position.
   - [X] N/A, the seat does not have a fore-aft adjustment

7. If the seat height is adjustable, put it in the full down position. (S8.1.2)
   - [X] N/A, no seat adjustment

8. Draw a horizontal line on the side of the seat cushion.
   - [X] N/A, the seat does not have a fore-aft adjustment

9. Using only the controls that change the seat in the fore-aft direction, mark the fore-aft seat positions. Mark the side of the seat and a reference position directly below on a part of the vehicle that does not adjust. For manual seats, move the seat forward one detent at a time and mark each detent as was done for the full rearward position. For power seats, mark only the full rearward, middle, and full forward positions. Label three of the positions with the following: F for full forward, M for mid-position (if there is no mid position, label the closest adjustment position to the rear of the mid-point), and R for full rearward.
   - [X] N/A, the seat does not have a fore-aft adjustment

10. Using only the controls that change the seat in the fore-aft direction, place the seat in the middle fore-aft position. (S8.1.2)

   - [X] N/A, the seat does not have a fore-aft adjustment

   If there is no mid position, put the seat in the closest adjustment position to the rear of the midpoint. Describe the location of the seat.
11. If seat adjustments, other than fore-aft, are present and the reference line is no longer horizontal, use those adjustments to maintain the reference line as closely as possible to the horizontal. *(S16.2.10.3.2)*

N/A – no seat adjustment

Reference angle as tested: Zero

12. The seat back angle, if adjustable, is set at the manufacturer's nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer. *(S8.1.3)*

N/A – no seat back angle adjustment

Manufacturer's design seat back angle: 12

Tested seat back angle: 12

13. If adjustable, set the head restraint at the full up and full forward position. *(S8.1.3)* Any adjustment of the head restraint shall be used to position it full forward. For example, if it rotates, rotate it such that the head restraint extends as far forward as possible.

N/A – no head restraint adjustment

14. Place any adjustable seat belt anchorages at the vehicle manufacturer's nominal design position for a 50th percentile adult male occupant *(S8.1.3)*

N/A – no adjustable upper seat belt anchorage

Manufacturer's specified anchorage position: 3 of 5

Tested anchorage position: 3 of 5

15. Is the driver seat a bucket seat?

Yes, go to 15.1 and skip 15.2.

No, go to 15.2 and skip 15.1

15.1 Bucket seats - Locate and mark a vertical Plane B through the longitudinal centerline of the seat. The longitudinal centerline of a bucket seat cushion is determined at the widest part of the seat cushion. Measure perpendicular to the longitudinal centerline of the vehicle.

Record the width of the seat: 520 mm

Record the distance from the edge of the seat to Plane B: 260 mm

15.2 Bench seats (including split bench seats):

- Driver seat: Locate and mark a vertical Plane B through the center of the steering wheel parallel to the vehicle longitudinal centerline.

- Passenger seat: Locate and mark a vertical longitudinal Plane B on the seat that is the same distance from the longitudinal centerline of the vehicle as the center of the steering wheel.

Distance from the vehicle centerline to the center of the steering wheel:

Distance from the vehicle centerline to Plane B:

16. Stow outboard armrests that are capable of being stowed. *(S7.4.5)*

17. Remove the arms of a Subpart E dummy and place it in the seat such that the mid sagittal plane is coincident with Plane B and the upper torso rests against the seat back. *(S10.4.1.1 & S10.4.1.2)*

18. Rest the thighs on the seat cushion
19. Position the H-point of the dummy within 0.5 inch of the vertical dimension and 0.5 inch of the horizontal dimension of a point 0.25 inch below the H-point determined by using the equipment and procedures specified in SAE J826 (APR 1980). (S10.4.2.1) Then measure the pelvic angle with respect to the horizontal using the pelvic angle gage. Adjust the dummy position until these three measurements are within the specifications. (S10.4.2.1 and S10.4.2.2)

X Horizontal inches from the point 0.25 below the determined H-point (0.5 inch max.) (S10.4.2.1)
X Vertical inches from the point 0.25 below the determined H-point (0.5 inch max.) (S10.4.2.1)
X Pelvic angle (20° to 25°)
X Vertical inches from the point 0.25 below the determined H-point (0.5 inch max.) (S10.4.2.1)
X Pelvic angle (20° to 25°) (S10.4.2.2)

20. Set the distance between the outboard knee clevis flange surfaces at 10.8 inches.
X Measured distance (10.6 inches) (S10.5): 10.5

21. To the extent practicable keep the thighs and the legs in a vertical plane (S10.5) and rest the thighs on the seat cushion while resting the feet on the floorpan or toe board.

22. Fasten the seat belt around the dummy.

23. Remove all slack from the lap belt portion. (S10.9)

24. Pull the upper torso webbing out of the retractor and allow it to retract; repeat this four times. (S10.9)

25. Apply a 2 to 4 pound tension load to the lap belt. (S10.9)
X Pound load applied: 3

26. Is the belt system equipped with a tension relieving device?

☐ Yes, continue
X No, go to 27

26.1 Introduce the maximum amount of slack into the upper torso belt that is recommended by the vehicle manufacturer in the vehicle owner's manual. (S10.9). Go to 25.

27. Check the statement that applies to this test vehicle:

27.1 Check the statement that applies to this test vehicle:
The torso and lap belt webbing of the seat belt system automatically retracts to a stowed position when the adjacent vehicle door is in an open position and the seat belt latch plate is released.

☐ Pass

27.2 The torso and lap belt webbing of the seat belt system automatically retracts when the seat belt latch plate is released.
X Pass

27.3 Neither A or B apply

☐ Fail

28. With the webbing and hardware in the stowed position are the webbing and hardware prevented from being pinched when the door is closed?
X Yes – Pass

☐ No – Fail
29. If this test vehicle has an open body (without doors) and has a belt system with a tension-relieving device, does the belt system fully retract when the tension-relieving device is deactivated?

X N/A
- Yes - Pass
- No - Fail

REMARKS:

I certify that I have read and performed each instruction.

DATA SHEET 12
SEAT BELT RETRACTION (§7.4.5)

Test Vehicle: 2004 Dodge Durango          NHTSA No.: C40383
Test Program: FMVSS 208 Compliance          Test Date: 1/28/04
Test Technician: Wayne Dahike

Test all front outboard seat belts other than those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

<table>
<thead>
<tr>
<th>DESIGNATED SEATING POSITION:</th>
<th>Right Front Passenger</th>
</tr>
</thead>
<tbody>
<tr>
<td>GVWR:</td>
<td>2994 kg</td>
</tr>
</tbody>
</table>

1. Is the vehicle a passenger car or walk-in van-type vehicle?
   - No

2. Position the seat's adjustable lumbar supports so that the lumbar support is in its lowest, retracted or deflated adjustment position. (§8.1.3)
   - N/A, no lumber adjustment

3. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (§16.2.10.2)
   - N/A, no additional support adjustment

4. If the seat cushion adjusts fore and aft, independent of the seat back, set this adjustment to the full rearward position. (§16.2.10.3.1)
   - N/A, no independent fore-aft seat cushion adjustment

5. If the seat cushion height adjusts independent of the seat back, set this adjustment to the full down position. (§16.2.10.3.1)
   - N/A, no independent seat cushion height adjustment

6. Put the seat in its full rearward position.
   - N/A, the seat does not have a fore-aft adjustment

7. If the seat height is adjustable, put it in the full down position. (§8.1.2)
   - N/A, no seat adjustment

8. Draw a horizontal line on the side of the seat cushion.

9. Using only the controls that change the seat in the fore-aft direction, mark the fore-aft seat positions. Mark the side of the seat and a reference position directly below on a part of the vehicle that does not adjust. For manual seats, move the seat forward one detent at a time and mark each detent as was done for the full rearward position. For power seats, mark only the full rearward, mid, and full forward positions. Label three of the positions with the following: F for full forward, M for mid-position (if there is no mid position, label the closest adjustment position to the rear of the mid-point), and R for full rearward.
   - N/A, the seat does not have a fore-aft adjustment

10. Using only the controls that change the seat in the fore-aft direction, place the seat in the middle fore-aft position. (§8.1.2)
    - If there is no mid position, put the seat in the closest adjustment position to the rear of the midpoint. Describe the location of the seat.
11. If seat adjustments, other than fore-aft, are present and the reference line is no longer horizontal, use those adjustments to maintain the reference line as closely as possible to the horizontal. (S16.2.10.3.2)

N/A – no seat adjustment

Reference angle as tested: Zero

12. The seat back angle, if adjustable, is set at the manufacturer's nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer. (S8.1.3)

N/A – no seat back angle adjustment

Manufacturer's design seat back angle: 12

Tested seat back angle: 12

13. If adjustable, set the head restraint at the full up and full forward position. (S8.1.3) Any adjustment of the head restraint shall be used to position it full forward. For example, if it rotates, rotate it such that the head restraint extends as far forward as possible.

N/A – no head restraint adjustment

14. Place any adjustable seat belt anchorages at the vehicle manufacturer's nominal design position for a 50th percentile adult male occupant (S8.1.3)

N/A – no adjustable upper seat belt anchorage

Manufacturer's specified anchorage position: 3 of 5

Tested anchorage position: 3 of 5

15. Is the driver seat a bucket seat?

Yes, go to 15.1 and skip 15.2.

No, go to 15.2 and skip 15.1

15.1 Bucket seats - Locate and mark a vertical Plane B through the longitudinal centerline of the seat. The longitudinal centerline of a bucket seat cushion is determined at the widest part of the seat cushion. Measure perpendicular to the longitudinal centerline of the vehicle.

Record the width of the seat: 520 mm

Record the distance from the edge of the seat to Plane B: 260 mm

15.2 Bench seats (including split bench seats):

Driver seat: Locate and mark a vertical Plane B through the center of the steering wheel parallel to the vehicle longitudinal centerline.

Passenger seat: Locate and mark a vertical longitudinal Plane B on the seat that is the same distance from the longitudinal centerline of the vehicle as the center of the steering wheel.

Distance from the vehicle centerline to the center of the steering wheel:

Distance from the vehicle centerline to Plane B: 

16. Stow outboard armrests that are capable of being stowed. (S7.4.5)

17. Remove the arms of a Subpart E dummy and place it in the seat such that the midsagittal plane is coincident with Plane B and the upper torso rests against the seat back. (S10.4.1.1 & S10.4.1.2)

18. Rest the thighs on the seat cushion
Position the H-point of the dummy within 0.5 inch of the vertical dimension and 0.5 inch of the horizontal dimension of a point 0.25 inch below the H-point determined by using the equipment and procedures specified in SAE J828 (APR 1980). (S10.4.2.1) Then measure the pelvic angle with respect to the horizontal using the pelvic angle gage. Adjust the dummy position until these three measurements are within the specifications. (S10.4.2.1 and S10.4.2.2)

**Horizontal inches from the point 0.25 below the determined H-point (0.5 inch max.)**
(S10.4.2.1)

**Vertical inches from the point 0.25 below the determined H-point (0.5 inch max.)**
(S10.4.2.1)

**Pelvic angle (20° to 25°)**
(S10.4.2.2.1)

**Pelvic angle (20° to 25°)**
(S10.4.2.2)

Set the distance between the outboard knee clavic flange surfaces at 10.6 inches.

**X** Measured distance (10.6 inches) (S10.5): 10.5

To the extent practicable keep the thighs and the legs in a vertical plane (S10.5) and rest the thighs on the seat cushion while resting the feet on the floorpan or toe board.

**X** Fasten the seat belt around the dummy.

**X** Remove all slack from the lap belt portion. (S10.9)

Pull the upper torso webbing out of the retractor and allow it to retract; repeat this four times. (S10.9)

**X** Apply a 2 to 4 pound tension load to the lap belt. (S10.9)

Pound load applied: 3

Is the belt system equipped with a tension relieving device?

- [ ] Yes, continue
- [ ] No, go to 27

**X** Introduce the maximum amount of slack into the upper torso belt that is recommended by the vehicle manufacturer in the vehicle owner's manual. (S10.9). Go to 25.

Check the statement that applies to this test vehicle:

- [ ] Pass

**X** The torso and lap belt webbing of the seat belt system automatically retracts to a stowed position when the adjacent vehicle door is in an open position and the seat belt latch plate is released.

**X** The torso and lap belt webbing of the seat belt system automatically retracts when the seat belt latch plate is released.

**X** Neither A or B apply

**X** Fall

**X** With the webbing and hardware in the stowed position are the webbing and hardware prevented from being pinched when the door is closed?

- [ ] Yes – Pass
- [ ] No – Fail
If this test vehicle has an open body (without doors) and has a belt system with a tension-relieving device, does the belt system fully retract when the tension-relieving device is deactivated?

- [X] N/A
- [ ] Yes – Pass
- [ ] No – Fail

   - [ ] Yes – Pass
   - [ ] No – Fail

7. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the belt is completely retracted or, if the belt is nonretractable, the belt is unlatched. (S7.4.6.2)
   - [ ] Yes – Pass
   - [ ] No – Fail
8. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the seat is moved to any position to which it is designed to be adjusted. (S7.4.6.2)
   [ ] Yes – Pass
   [ ] No – Fail

9. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the seat back, if foldable, is folded forward as far as possible and then moved backward into position. (S7.4.6.2)
   [ ] Yes – Pass
   [ ] No – Fail

10. Is the inboard receptacle end of the seat belt assembly, installed in the front outboard designated seating position, accessible with the center armrest in any position to which it can be adjusted (without moving the armrest)? (S7.4.6.2)
    [ ] Yes – Pass
    [ ] No – Fail
    [ ] N/A – Rear seat

DATA SHEET 13
SEAT BELT GUIDES AND HARDWARE (§7.4.6)

Test Vehicle: 2004 Dodge Durango  NHTSA No.: C40303
Test Program: FMVSS 208 Compliance  Test Date: 1/28/04
Test Technician: Wayne Dehike

Test seat belts except those in walk-in van-type vehicles and those at front outboard designated seating positions in passenger cars. Complete a form for each applicable seat belt.

DESIGNATED SEATING POSITION: Right Third Row Passenger

1. Is the seat cushion movable so that the seat back serves a function other than seating? (§7.4.6.1(b))
   - Yes, this form is complete
   - No, go to 2

2. Is the seat removable? (§7.4.6.1(b))
   - Yes, this form is complete
   - No, go to 3

3. Is the seat movable so that the space formerly occupied by the seat can be used for a secondary function? (§7.4.6.1(b))
   - Yes, this form is complete
   - No, go to 4

4. Is the webbing designed to pass through the seat cushion or between the seat cushion and seat back? (§7.4.6.1(a))
   - Yes, go to 5
   - No, this form is complete

5. Does one of the following three parts, the seat belt latch plate, the buckle, or the seat belt webbing, stay on top of or above the seat cushion under normal conditions (i.e., conditions other than when belt hardware is intentionally pushed behind the seat by a vehicle occupant)? (§7.4.6.1(a))
   - Yes - Pass
   - No - Fall
   - Identify the part(s) on top or above the seat.
     - Seat belt latch plate
     - Buckle
     - Seat belt webbing

6. Are the remaining two seat belt parts accessible under normal conditions?
   - Yes - Pass
   - No - Fall

7. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the belt is completely retracted or, if the belt is nonretractable, the belt is unlatched. (§7.4.6.2)
   - Yes - Pass
   - No - Fall
8. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the seat is moved to any position to which it is designed to be adjusted. (S7.4.8.2)
   - Yes – Pass
   - No – Fail

9. The buckle and latch plate do not pass through the guides or conduits provided and fall behind the seat when the seat back, if foldable, is folded forward as far as possible and then moved backward into position. (S7.4.8.2)
   - Yes – Pass
   - No – Fail

10. Is the inboard receptacle end of the seat belt assembly, installed in the front outboard designated seating position, accessible with the center armrest in any position to which it can be adjusted (without moving the armrest)? (S7.4.8.2)
    - Yes – Pass
    - No – Fail
    - N/A – Rear seat

REMARKS:

I certify that I have read and performed each instruction.

1. Driver Designated Seating Position:
   - [X] 1.1 Position the seat's adjustable lumbar supports so that the lumbar supports are in the lowest, retracted or deflated adjustment positions. (S16.2.10.1)
   - [ ] N/A - No lumbar adjustment
   - [X] 1.2 Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position (S16.2.10.2)
   - [X] N/A - No additional support adjustment
   - [X] 1.3 Mark a point (seat cushion reference point) on the side of the seat cushion that is between 150 mm and 250 mm from the front edge of the seat cushion.
   - [X] 1.4 Draw a line (seat cushion reference line) through the seat cushion reference point.
   - [X] 1.5 Using only those controls that primarily move the seat in the fore-aft direction, move the seat cushion reference point to the rearmost position.
   - [X] 1.6 If the seat cushion adjusts fore-aft, independent of the seat belt, use only those controls that primarily move the seat cushion in the fore-aft direction to move the seat cushion reference point to the rearmost position (S16.2.10.3)
   - [X] N/A - No independent fore-aft seat cushion adjustment
   - [X] 1.7 Using any part of any control, other than the parts just used for fore-aft positioning, determine the range of angles of the seat cushion reference line and set the seat cushion reference line at the mid-angle.

   - Maximum Angle: (Fwd Up) 3.6 Degrees
   - Minimum Angle: (Fwd Down) 7.7 Degrees
   - Mid-angle: (Fwd Down) 2.0 Degrees
   - [X] 1.8 If the seat and/or seat cushion height is adjustable, use any part of any control other than those which primarily move the seat or seat cushion fore-aft, to put the seat cushion reference point in its lowest position with the seat cushion reference line angle at the mid-angle found in 1.7.
   - [ ] N/A - No seat height adjustment
   - [X] 1.9 Using only those controls that primarily move the seat in the fore-aft direction, verify the seat is in the rearmost position.
   - [X] 1.10 Using only those controls that primarily move the seat in the fore-aft direction, mark for future reference the fore-aft seat positions. Mark each position so that there is a visual indication when the seat is at a particular position. For manual seats, move the seat forward one detent at a time and mark each detent. For power seats, mark only the rearmost, middle, and foremost positions. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the closest adjustment position to the rear of the mid-point), and R for rearmost.
   - [X] 1.11 Use only those controls that primarily move the seat in the fore-aft direction to place the seat in the rearmost position.
1.12 Using any controls, other than the controls that primarily move the seat and/or seat cushion in the fore-aft direction, find and visually mark for future reference the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 1.7.

1.13 Using only the controls that primarily move the seat and/or seat cushion in the fore-aft direction, place the seat in the mid-fore-aft position.

1.14 Using any controls, other than the controls that primarily move the seat in the fore-aft direction, find and visually mark for future reference the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 1.7.

1.15 Using only the controls that change the seat in the fore-aft direction, place the seat in the foremost position.

1.16 Using any controls, other than the controls that primarily move the seat in the fore-aft direction, find and visually mark for future reference the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 1.7.

1.17 Visually mark for future reference the seat back angle, if adjustable, at the manufacturer's nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer.

☐ N/A – No seat back angle adjustment

Manufacturer's design seat back angle: 12

1.18 Is the seat a bucket seat?

☐ Yes, go to 1.18.1 and skip 1.18.2

☐ No, go to 1.18.2 and skip 1.18.1

1.18.1 Bucket seats:

Locate and mark for future reference the longitudinal centerline of the seat cushion. The longitudinal centerline of a bucket seat cushion is determined at the widest part of the seat cushion. Measure perpendicular to the longitudinal centerline of the vehicle. (S16.3.1.10)

Record the width of the seat cushion: 520 mm

One half the width of the seat cushion is: 260 mm

Record the distance from the edge of the seat cushion to the seat mark: 200 mm

1.18.2 Bench seats:

☐ Locate and mark for future reference the longitudinal line on the seat cushion that marks the longitudinal vertical plane through the centerline of the steering wheel.

2. Passenger Designated Seating Position

2.1 Is the seat adjustable independent of the driver seating position?

☐ Yes, go to 2.2

☐ No, go to 2.18

2.2 Position the seat's adjustable lumbar supports so that the lumbar supports are in the lowest, retracted or deflated adjustment positions (S16.2.10.1, S20.1.9.1, S22.1.7.1)

☐ N/A – No lumbar adjustment

2.3 Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2, S20.1.9.2, S22.1.7.2)
X N/A – No additional support adjustment

2.4 Mark a point (seat cushion reference point) on the side of the seat cushion that is between 150 mm and 250 mm from the front edge of the seat cushion.

2.5 Draw a line (seat cushion reference line) through the seat cushion reference point.

2.8 Using only the controls that primarily move the seat in the fore-aft direction, move the seat cushion reference point to the rearmost position.

2.7 If the seat cushion adjusts fore-aft, independent of the seat back, use only the controls that primarily move the seat cushion in the fore-aft direction to move the seat cushion reference point to the rearmost position (S16.2.10.3, S20.1.8.3, S22.1.7.3)

X N/A – No independent fore-aft seat cushion adjustment.

2.8 Using any part of the control, other than the parts just used for fore-aft positioning, determine the range of angles of the seat cushion reference line and set the seat cushion reference line at the mid-angle.

Maximum Angle: Zero Degrees

Minimum Angle: Zero Degrees

Mid-angle: Zero Degrees

2.9 If the seat and/or seat cushion height is adjustable, use any part of any control other than those which primarily move the seat or seat cushion fore-aft, to put the seat cushion reference point in its lowest position with the seat cushion reference line angle at the mid-range angle.

X N/A – No seat height adjustment

2.10 Using only the controls that primarily move the seat and/or seat cushion in the fore-aft direction, verify the seat is in the rearmost position.

2.11 Using only the controls that primarily move the seat in the fore-aft direction, mark for future reference the fore-aft seat positions. Mark each position so that there is a visual indication when the seat is at a particular position. For manual seats, move the seat forward one dent and mark each dent. For power seats, mark only the rearmost, middle, and foremost positions. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the closest adjustment position to the rear of the mid-point), and R for rearmost.

2.12 Using only the controls that primarily move the seat in the fore-aft direction, place the seat in the rearmost position.

2.13 Using any controls, other than the controls that primarily move the seat in the fore-aft direction, find and visually mark for future reference the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 2.8.

X N/A – No seat height adjustment Go to 2.18

2.14 Using only the controls that primarily move the seat in the fore-aft direction, place the seat in the mid-fore-aft position.

2.15 Using any controls, other than the controls that primarily move the seat in the fore-aft direction, find and visually mark for future reference the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 2.8.

2.16 Using only the controls that change the seat in the fore-aft direction, place the seat in the foremost position.
2.17 Using any controls, other than the controls that primarily move the seat in the fore-aft direction, find and visually mark for future reference the maximum, minimum, and middle height of the seat cushion reference point with the seat cushion reference line at the mid-angle determined in 2.8.

2.19 Visually mark for future reference the seat back angle, if adjustable, at the manufacturer's nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer.

☐ N/A - No seat back angle adjustment
☐ N/A - The seat back angle adjustment is controlled by the setting of the driver seat back angle.

Manufacturer's design seat back angle: 12

Actual seat back angle: 12

2.19 Is the seat a bucket seat?

☐ Yes, go to 2.19.1 and skip 2.19.2
☐ No, go to 2.19.2 and skip 2.19.1

2.19.1 Bucket seats:

☐ Locate and mark for future reference the longitudinal centerline of the seat cushion. (S20.2.1.3, S22.2.1.3) The longitudinal centerline of a bucket seat cushion is determined at the widest part of the seat cushion. Measure perpendicular to the longitudinal centerline of the vehicle. (S20.1.10)

Record the width of the seat cushion: 520 mm

One half the width of the seat cushion is: 260 mm

☐ Record the distance from the edge of the seat cushion to the longitudinal centerline of the seat cushion. (The vertical plane through this longitudinal centerline is Plane B for suppression.) 200 mm

2.19.2 Bench seats:

☐ Locate and mark for future reference the longitudinal centerline of the passenger seat cushion. The longitudinal centerline is the same distance from the longitudinal centerline of the vehicle as the center of the steering wheel. (S20.2.1.3, S22.2.1.3)

☐ Record the distance from the longitudinal centerline of the vehicle to the center of the steering wheel:

☐ Record the distance from the longitudinal centerline of the vehicle to the longitudinal centerline of the seat cushion. (The vertical plane through this longitudinal centerline is Plane B for suppression.)

3. Head Restraints

☐ N/A, vehicle contains automatic head restraints

☐ N/A, there is no head restraint adjustment

3.1 Left outboard

3.1.1 Adjust the head restraint to its lowest position. (S16.3.4.2)

3.1.2 Any adjustment of the head restraint shall be used to position it full forward. For example, if it rotates, rotate it such that the head restraint extends as far forward as possible. Mark the foremost position.

3.1.3 Measure the vertical distance from the top most point of the head restraint to the bottom most point. Locate and mark a horizontal plane through the midpoint of this distance.
Vertical height of head restraint (mm): 180
Mid-point height (mm): 90

3.2 Right outboard

3.2.1 Adjust the head restraint to its lowest position. (S16.3.4.2)

3.2.2 Any adjustment of the head restraint shall be used to position it full forward. For example, if it rotates, rotate it such that the head restraint extends as far forward as possible. Mark the foremost position.

3.2.3 Measure the vertical distance from the top most point of the head restraint to the bottom most point. Locate and mark a horizontal plane through the midpoint of this distance. Vertical height of head restraint (mm): 180
Mid-point height (mm): 90

4. Steering Wheel

4.1 Is the steering wheel adjustable up and down and/or in and out?

[X] Yes, go to 4.2

No, this form is complete

[X] 4.2 Find and mark for future reference each up and down position. Label three of the positions with the following: H for highest, M for mid-position (if there is no mid-position, label the next lowest adjustment position), and L for lowest.

[X] N/A, steering wheel is not adjustable up and down

[X] 4.3 Find and mark for future reference each in and out position. Label three of the positions with the following: F for foremost, M for mid-position (if there is no mid-position, label the next rearmost adjustment position), and R for rearmost.

[X] N/A, steering wheel is not adjustable in and out

5. Driver Low Risk Deployment

[X] N/A, no low risk deployment tests scheduled

5.1 Position the steering wheel so the front wheels are in the straight-ahead position. (S26.2.1)

5.2 Position any adjustable parts of the steering controls to the mid-position as determined in item 3 above. If a mid-position adjustment is not achievable, position the controls to the next lowest detent position. (S26.2.1)

5.3 Locate the vertical plane parallel to the vehicle longitudinal centerline through the geometric center of the opening through which the driver air bag deploys into the occupant compartment. This is referred to as "Plane E." (Check determination method below.) (S26.2.5)

[X] Plane E determined using manufacturer's information supplied by the COTR. (Found in Appendix D on pages D-94 and D-95) OR

Plane E determined by test lab personnel and approved by the COTR.

(include supporting documentation in the test report)

8. Passenger Low Risk Deployment – Planes C and D

N/A, no low risk deployment tests scheduled

6.1 Locate the horizontal plane through the geometric center of the opening through which the right front air bag deploys into the occupant compartment. This is referred to as “Plane C.” (Check location method below.) (S22.4.1.3)

Plane C located using manufacturer's information supplied by the COTR.
(Found in Appendix D on pages D-94 and D-95) OR
Plane C located by test lab personnel and approved by the COTR.
(Including supporting documentation in the test report.)

<table>
<thead>

</table>

6.2 Locate the vertical plane parallel to the vehicle longitudinal centerline through the geometric center of the opening through which the right front air bag deploys into the occupant compartment. This is referred to as “Plane D.” (Check determination method below.) (S22.4.1.2)

Plane D determined using manufacturer's information supplied by the COTR.
(Found in Appendix D on pages D-94 and D-95) OR
Plane D determined by test lab personnel and approved by the COTR.
(Including supporting documentation in the test report.)

<table>

<td></td>
</tr>
</tbody>
</table>

6.3 Mark the intersection of Planes C and D on the instrument panel.

7. 5th Female Dummy
Mark a point on the chin of the dummy 40 mm below the center of the mouth. (Chin Point) (S26.2.6)

8. 8-Year-Old Dummy
Locate and mark a point on the front of the dummy’s chest jacket on the midsagittal plane which is 139 mm (5.5 in) ± 3 mm (± 0.1 in) along the surface of the skin down from the top of the skin at the neck line. Designate this point as “Point 1.” (S24.4.1.1)

“Point 1” measurement (mm): 139
9. 3-Year-Old Dummy
Locate and mark a point on the front of the dummy's chest jacket on the midsagittal plane which is 114 mm (4.5 in.) ± 3 mm (± 0.1 in) along the surface of the skin down from the top of the skin at the neck line. Designate this point as "Point 1." (S22.4.1.1)

Point 1" measurement (mm ± 3 mm): 114

REMARKS:
I certify that I have read and performed each instruction.

</tbody>
</table>

Successful Unbelted 5th percentile Female Dummy Reactivation was performed with the seat in the Rearward position. (SN513)

The CRS would not fit in the Forward and Middle Seat Slide positions due to interference with the center console.

There was no telltale light indication; the car bed was classified as an Empty Seat.
This was verified with the StarSCAN diagnostic tool.

1. Fill the transmission with transmission fluid to the satisfactory range.
2. Drain fuel from vehicle
3. Run the engine until fuel remaining in the fuel delivery system is used and the engine stops.
4. Record the usable fuel tank capacity supplied by the COTR
   Useable Fuel Tank Capacity supplied by COTR: 102.2 liters (27.0 gallons)
5. Record the fuel tank capacity supplied in the owner's manual.
   Useable Fuel Tank Capacity In owner's manual: 102.2 liters (27.0 gallons)
6. Using purple dyed Stoddard solvent having the physical and chemical properties of Type 1 solvent or cleaning fluid, Table 1, ASTM Standard D484-71, "Standard Specifications for Hydrocarbon Dry-cleaning Solvents," or gasoline, fill the fuel tank.
   Amount In Tank: 102.2 liters (27.0 gallons)
7. Fill the coolant system to capacity.
8. Fill the engine with motor oil to the Max. mark on the dip stick.
9. Fill the brake reservoir with brake fluid to its normal level.
10. Fill the windshield washer reservoir to capacity.
11. Inflate the tires to the tire pressure on the tire placard. If no tire placard is available, inflate the tires to the recommended pressure in the owner's manual.
   Tire placard pressure:
   Owner's manual pressure:
   Actual inflated pressure:
12. Record the vehicle weight at each wheel to determine the unloaded vehicle weight (UVW), i.e. "as delivered" weight.
   Right Front (kg): 901.0
   Left Front (kg): 583.3
   Total Front (kg): 1484.3
   Right Rear (kg): 514.8
   Left Rear (kg): 527.1
   Total Rear (kg): 1041.9
   % Total Weight: 53.2
   % Total Weight: 46.8
   UVW = TOTAL FRONT PLUS TOTAL REAR (KG): 2226.2
13. UVW Test Vehicle Attitude: (All dimensions in millimeters)
13.1 Mark a point on the vehicle above the center of each wheel.
13.2 Place the vehicle on a level surface.
13.3 Measure perpendicular to the level surface to the 4 points marked on the body and record the measurements.

RF: 855  LF: 849  RR: 925  LR: 978

14. Calculate the Rated Cargo and Luggage Weight (RCLW).

14.1 Does the vehicle have the vehicle capacity weight (VCW) on the certification label or tire placard?

☐ Yes, go to 14.3
☒ No, go to 14.2

14.2 VCW = Gross Vehicle Weight – UVW

VCW = 2988.0 kg – 2228.2 kg = 767.8 kg

14.3 VCW = 767.8 kg (1693 lbs)

14.4 Does the certification or tire placard contain the Designated Seating Capacity (DSC)?

☐ Yes, go to 14.6
☒ No, go to 14.5 and skip 14.6

14.5 DSC = Total number of seat belt assemblies = 7

14.6 DSC = __

14.7 RCLW = VCW – (68 kg x DSC) = 767.8 kg – (68 kg x 7) = 291.8 kg

14.8 Is the vehicle certified as a truck, MPV or bus (see the certification label on the door jamb)?

☐ Yes, if the calculated RCLW is greater than 136 kg, use 136 kg as the RCLW. (S8.1.1)
☒ No, use the RCLW calculated in 14.7

15. Fully Loaded Weight (100% fuel III)

15.1 Place the appropriate test dummy in both front outboard seating positions.

Driver: ☒ 5th female  ☐ 50th male
Passenger: ☒ 5th female  ☐ 50th male

15.2 Load the vehicle with the RCLW from 14.7 or 14.8 whichever is applicable.

15.3 Place the RCLW in the cargo area. Center the load over the longitudinal centerline of the vehicle. (S8.1.1 (d))

15.4 Record the vehicle weight at each wheel to determine the Fully Loaded Weight.

<table>
<thead>
<tr>
<th>Right Front (kg): 644.1</th>
<th>Right Rear (kg): 604.6</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left Front (kg): 564.7</td>
<td>Left Rear (kg): 513.5</td>
</tr>
<tr>
<td>Total Front (kg): 1238.8</td>
<td>Total Rear (kg): 1118.1</td>
</tr>
<tr>
<td>% Total Weight: 50.4 %</td>
<td>% Total Weight: 49.6 %</td>
</tr>
<tr>
<td>% GVW: 47.0 %</td>
<td>% GVW: 52.1 %</td>
</tr>
<tr>
<td>Fully Loaded Weight = Total Front Plus Total Rear (kg): 2457.9</td>
<td></td>
</tr>
</tbody>
</table>

16. Fully Loaded Test Vehicle Attitude: (All dimensions in millimeters)

16.1 Place the vehicle on a level surface.
16.2 Measure perpendicular to the level surface to the 4 points marked on the body (see 13.1 above) and record the measurements:

| RF: | 849 | LF: | 848 | RR: | 897 | LR: | 894 |

17. Drain the fuel system.

18. Using purple dyed Stoddard solvent having the physical and chemical properties of Type 1 solvent or cleaning fluid, Table 1, ASTM Standard D484-71, “Standard Specifications for Hydrocarbon Dry-cleaning Solvents,” fill the fuel tank to 94 percent of usable capacity. (FILLED TO 95.2% DUE TO MISINTERPRETATION OF FUEL FILL DATA)

Fuel tank capacity x .94 = 102.2 liters (27.0 gallons) x .94 = 98.1 liters (25.38 gallons)

Amount added = 97.3 liters (25.7 gallons) 95.2%

19. Crank the engine to fill the fuel delivery system with Stoddard solvent.

20. Calculate the test weight range.

20.1 Calculated Weight = UVW (see 12 above) + RCLW (see 14 above) + 2x(dummy weight)

\[2460.2 \text{ kg} = 2226.2 \text{ kg} + 136.0 \text{ kg} + 98.0 \text{ kg}\]

20.2 Test Weight Range = Calculated Weight (± 4.5 kg, ± 9 kg.)

Max. Test Weight = Calculated Test Weight - 4.5 kg = 2455.7 kg

Min. Test Weight = Calculated Test Weight - 9 kg = 2451.2 kg

21. Remove the RCLW from the cargo area.

22. Drain transmission fluid, engine coolant, motor oil, and windshield washer fluid from the test vehicle so that Stoddard solvent leakage from the fuel system will be evident.

23. Vehicle Components Removed For Weight Reduction:
   RH rear tail light, hub covers, right rear window glass, and third row seats.

24. Secure the equipment and ballast in the load carrying area and distribute it, as nearly as possible, to obtain the proportion of axle weight indicated by the gross axle weight ratings and center it over the longitudinal centerline of the vehicle.

25. If necessary, add ballast to achieve the actual test weight.

26. Weight of Ballast: 34.0 kg in cargo area

Ballast, including test equipment, must be contained so that it will not shift during the impact event or interfere with data collection or interfere with high-speed film recordings or affect the structural integrity of the vehicle or do anything else to affect test results. Care must be taken to assure that any attachment hardware added to the vehicle is not in the vicinity of the fuel tank or lines.

27. Record the vehicle weight at each wheel to determine the actual test weight:

<table>
<thead>
<tr>
<th>Right Front (kg):</th>
<th>826.4</th>
<th>Right Rear (kg):</th>
<th>654.7</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left Front (kg):</td>

<td>47.0</td>
<td>% GVW:</td>
<td>53.1</td>
</tr>
<tr>
<td>(% GVW = Axle GVW divided by Vehicle GVW)</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>TOTAL FRONT PLUS TOTAL REAR (kg):</td>
<td>2487.7</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
28. Is the test weight between the Max. Weight and the Min. Weight (See 20.2)?
   - Yes
   - No, explain why not.

29. Test Weight Vehicle Attitude: (all dimensions in millimeters)
   29.1 Place the vehicle on a level surface
   29.2 Measure perpendicular to the level surface to the 4 points marked on the body (see 13 above) and record the measurements:
      - RF: 854, LF: 847, RR: 904, LR: 894

30. Summary of test attitude
   30.1 AS DELIVERED:
      - RF: 855, LF: 849, RR: 925, LR: 919
      AS TESTED:
      - RF: 856, LF: 849, RR: 997, LR: 894
      FULLY LOADED:
      - RF: 849, LF: 849, RR: 897, LR: 894

30.2 Is the "as tested" test attitude equal to or between the "fully loaded" and "as delivered" attitude?
   - Yes
   - No, explain why not.

1. Find the location where the vertical plane parallel to the longitudinal centerline of the vehicle and through the center of the left front outboard seating position intersects the left rear seat cross member. Install an accelerometer at this intersection on the rear seat cross member to record x-direction accelerations. Record the location on the following chart.

2. Find the location where the vertical plane parallel to the longitudinal centerline of the vehicle and through the center of the right front outboard seating position intersects the right rear seat cross member. Install an accelerometer at this intersection on the rear seat cross member to record x-direction accelerations. Record the location on the following chart.

3. Find the location where a vertical plane through the longitudinal centerline of the vehicle and a vertical transverse plane through the center of the two wheels on opposite sides of the engine intersect at the top of the engine. Install an accelerometer at this intersection to record x-direction accelerations. Record the location on the following chart.

4. Find the location where a vertical plane through the longitudinal centerline of the vehicle and a vertical transverse plane through the center of the two wheels on opposite sides of the engine intersect the bottom of the engine. Install an accelerometer at this intersection to record x-direction accelerations. Record the location on the following chart.

5. Install an accelerometer on the right front brake caliper to record x-direction accelerations. Record the location on the following chart.

6. Find the location where a vertical plane through the longitudinal centerline of the vehicle intersects the top of the instrument panel. Install an accelerometer at this intersection to record x-direction accelerations. Record the location on the following chart.

7. Install an accelerometer on the left front brake caliper to record x-direction accelerations. Record the location on the following chart.

8. Find the location where a vertical plane through the longitudinal centerline of the vehicle intersects the floor of the trunk. Install an accelerometer on the trunk floor at this intersection to record x-direction accelerations. Record the location on the following chart.

1. FMVSS 208 vehicle targeting requirements (See Figures 28A and 28B)
   1.1 Targets A1 and A2 are on flat rectangular panels.
   1.2 Three circular targets at least 90 mm in diameter and with black and yellow quadrants are mounted at the front on the outboard sides of A1 and A2. The center of each circular target is 100 mm from the one next to it.
   1.3 Distance between targets (mm): 100 mm
   1.4 The distance between the first circular target at the front of A1 and A2 and the last circular target at the back of A1 and A2 is at least 915 mm.
   1.5 Distance between the first and last circular targets (mm): 915 mm
   1.6 Firmly fix target A1 on the vehicle roof in the vertical longitudinal plane that is coincident with the midsagittal plane of the driver dummy.
   1.7 Two circular targets (C1 and C2) at least 90 mm in diameter and with black and yellow quadrants are mounted on the outside of the driver door. The centers of each circular target are at least 610 mm apart.
   1.8 Distance between targets (mm): 610 mm
   1.9 Place tape with squares having alternating colors on the top portion of the steering wheel.
   1.10 Chalk the bottom portion of the steering wheel.
   1.11 Is this an offset test?
      Yes, continue with this section
      No, go to 2.
   1.12 Measure the width of the vehicle.
      Vehicle width (mm):
1.13 Find the centerline of the vehicle. (% of the vehicle width)

1.14 Find the line parallel to the centerline of the vehicle and 0.1 x vehicle width from the centerline of the vehicle.

1.15 Apply 25 mm wide tape with alternating black and yellow squares parallel to and on each side of the line found in 1.14. The edge of each tape shall be 50 mm from the line found in 1.14. The tape shall extend from the bottom of the bumper to the front edge of the windshield. (Figure 28D)

2. Barrier Targeting

2.1 Fix two stationary targets D1 and D2 to the barrier as shown in the Figure 28A. One target is in the vertical longitudinal plane that is coincident with the midsagittal plane of the driver dummy. The other is in the vertical longitudinal plane that is coincident with the midsagittal plane of the passenger dummy.

2.2 Targets D1 and D2 are on a rectangular panel.

2.3 Three circular targets at least 90 mm in diameter and with black and yellow quadrants are mounted on the sides of the rectangular panel away from the longitudinal centerline of the vehicle. The center of each circular target is 100 mm from the one next to it.

Distance between circular targets on D1 (mm): 100mm

Distance between circular targets on D2 (mm): 100mm

3. FMVSS 208 Dummy Targeting Requirements

3.1 Place a circular target with black and yellow quadrants on both sides of the driver dummy head as close as possible to the center of gravity of the head in the x and z direction (relative to the measuring directions of the accelerometers).

3.2 Place a circular target with black and yellow quadrants on both sides of the passenger dummy head as close as possible to the center of gravity of the head in the x and z direction (relative to the measuring directions of the accelerometers).

3.3 Place a circular target with black and yellow quadrants on the outboard shoulder of the driver dummy. Place the target as high up on the arm as possible at the intersection of the arm and shoulder. The sleeve of the shirt on the dummy may be cut to make the target visible, but do not remove any material.

3.4 Place a circular target with black and yellow quadrants on the outboard shoulder of the passenger dummy. Place the target as high up on the arm as possible at the intersection of the arm and shoulder. The sleeve of the shirt on the dummy may be cut to make the target visible, but do not remove any material.

4. FMVSS 204 Targeting Requirements

4.1 Is an FMVSS 204 Indicant test ordered on the "COTR Vehicle Work Order."

4.2 Yes, continue with this form.

4.2.1 Rejection panel (Figure 28C)

4.2.2 The panel deviates no more than 6 mm from perfect flatness when suspended vertically.

4.2.3 The targets on the panel are circular targets at least 90 mm in diameter and with black and yellow quadrants.

4.2.4 The center of each of the 4 outer targets are placed within 1 mm of the centers of a square measuring 914 mm on each side.

4.2.5 Locate another square with 228 mm sides and with the center of this square coincident with the center of the 914 mm square.

4.2.6 The center of the 4 inner targets are placed at the midpoints of each of the 228 mm sides.
4.3 Place a circular target at least 90 mm in diameter and with black and yellow quadrants on a material (cardboard, metal, etc.) that can be taped to the top of the steering column.

4.4 Tape the target from 4.3 to the top of the steering column in a manner that does not interfere with the movement of the steering column in a crash.

REMARKS: Center Rear Passenger Dummy Target Information:

Horizontal distance from camera to dummy reference targets: 762 mm
Horizontal distance from camera to vehicle reference targets: 1074 mm
Distance between 1" reference targets: 75 mm
Reference targets were placed on inch tape for continuous reference.

I certify that I have read and performed each instruction.

APPENDIX G

DUMMY POSITIONING PROCEDURES
FOR 50TH DRIVER TEST DUMMY CONFORMING TO SUBPART Q OF PART 572

Test Vehicle: 2004 Dodge Durango  
NHTSA No.: 040333
Test Program: FMVSS 208 Compliance  
Test Date: 4/1/04
Test Technician: Eric Peschman

X.1. Position the seat's adjustable lumbar supports so that the lumbar supports are in the lowest, retracted or deflated adjustment position. (S16.2.10.1)
   N/A – No lumbar adjustment

X.2. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   N/A – No additional support adjustment

X.3. If the seat cushion adjusts fore and aft, independent of the seat back, set this adjustment to the full rearward position. (S16.2.10.3.1)
   N/A – No independent fore-aft seat cushion adjustment

X.4. Use the seat markings determined during the completion of Data Sheet 14 to set the rearmost fore-aft position, mid-height position and the seat cushion mid-angle. (S16.3.2.1.1)

X.5. If the vehicle has an adjustable accelerator pedal, place it in the full forward position. (S16.3.2.2.1)
   N/A accelerator pedal not adjustable

X.6. Set the steering wheel hub at the geometric center of the full range of driving positions including any telescopng positions as determined in data sheet 14. (S16.2.9)

X.7. Fully recline the seat back. (S16.3.2.1.2)
   N/A seat back not adjustable.

X.8. Place the dummy in the seat with the legs at an angle of 120 degrees to the thighs. The calves should not be touching the seat cushion. (S16.3.2.1.2)

X.9. Position the dummy in the seat such that the midsagittal plane is coincident with the longitudinal seat cushion markings as determined in Item 1.18 of Data Sheet 14 (S16.3.2.1.3 and S16.3.2.1.4)

X.10. Hold down the dummy's thighs and push rearward on the upper torso to maximize the pelvic angle. (S16.3.2.1.5)

X.11. Set the angle between the legs and the thighs to 120 degrees. (S16.3.2.1.6)
X.12. Set the transverse distance between the centers of the front of the knees at 160 to 170 mm. (6.3 to 6.7 inches) Center the knee separation with respect to the longitudinal seat cushion marking as determined in item 1.18 of Data Sheet 14. (S16.3.2.1.6) Record Knee Separation 165 mm

X.13. Push rearward on the dummy's knees until the pelvis contacts the seat back, or the backs of the calves contact the seat cushion, whichever occurs first. (S16.3.2.1.8) Pelvis contacted seat back.

X.14. Gently rock the upper torso ± 5 degrees (approximately 51 mm (2 inches)) side to side three times. (S16.3.2.1.7)

X.15. If needed, extend the legs until the feet do not contact the floor pan. The thighs should be resting on the seat cushion. (S16.3.2.1.8)

X.16. Position the right foot until the foot is in line with a longitudinal vertical plane passing through the center of the accelerator pedal. Maintain the leg and thigh in a vertical plane. (S16.3.2.1.8)

X.17. Rotate the left leg and thigh laterally to equalize the distance between each knee and the longitudinal seat cushion marking as determined in item 1.18 of Data Sheet 14. (S16.3.2.1.8)

X.18. Attempt to return the seat to the foremost fore-aft position, mid-height, and seat cushion mid-angle. The foot may contact and depress the accelerator and/or change the angle of the foot with respect to the leg. (S16.3.2.1.8)

X. Foremost position achieved. Proceed to step 23.

X. Foremost not achieved because of foot interference. Proceed to step 20.

X. Foremost not achieved because of steering wheel contact.

X.19. If the dummy's legs contact the steering wheel, move the steering wheel up the minimum amount required to avoid contact. If the steering wheel is not adjustable separate the knees the minimum required to avoid contact. (S16.3.2.1.8)

X. N/A - there was no leg contact.

X. Steering wheel repositioned.

X. Knees separated.

X.20. If the left foot interferes with the clutch or brake pedals, rotate the left foot about the leg to provide clearance. If this is not sufficient, rotate the thigh outboard at the hip the minimum amount required for clearance. (S16.3.2.1.8)

X. N/A. No foot interference with pedals.

X. Foot adjusted to provide clearance.

X. Foot and Thigh adjusted to provide clearance.
21. Continue to move the seat. Use seat controls to line up the seat markings determined during the completion of Data Sheet 14 to set the foremost fore-aft position, mid-height position and the seat cushion mid-angle. If the dummy contacts the interior move the seat rearward until a maximum clearance of 5 mm (0.2 inches) is achieved or the seat is in the closest detent position that does not cause dummy contact. (S16.3.2.1.8)
   - Dummy contact. Clearance set at maximum of 5 mm. Measured Clearance

22. If the steering wheel was repositioned in step 19, return the steering wheel to the original position. If the steering wheel contacts the dummy before reaching the original position, position the wheel until a maximum clearance of 5 mm (0.2 inches) is achieved, or the steering wheel is in the closest detent position that does not cause dummy contact. (S16.3.2.1.8)
   - N/A Steering wheel was not repositioned.
   - Original position achieved.
   - Dummy contact. Clearance set at maximum of 5 mm. Measured Clearance

...
X25. Verify the dummy abdomen is properly installed. (S16.3.2.1.9)
   X Abdomen still seated properly into dummy
   _ Abdomen was adjusted because it was not seated properly into dummy

X26. Head Angle
   _ N/A, neither the pelvis nor the abdomen were adjusted.

X26.1 Head still level (Go to 27)

   26.2 Head level adjusted

   _ Head Level Achieved. (Check all that apply)
     _ Head leveled using the adjustable seat back
     _ Head leveled using the neck bracket.
     Head Angle ____________ degrees

   _ Head Level NOT Achieved. (Check all that apply)
     _ Head level adjusted using the adjustable seat back
     _ Head level adjusted using the neck bracket.
     Head Angle ____________ degrees

X27. If the dummy torso contacts the steering wheel while performing step 23, reposition the
       steering wheel in the following order to eliminate contact.
       _ N/A, No dummy torso contact with the steering wheel.

X27.1 Adjust telescoping mechanism.
       _ N/A No telescoping adjustment.

   _ Adjustment performed (fill in appropriate change)
     Steering wheel moved _____ detent positions in the forward direction.
     Steering wheel moved ____ mm in the forward direction.

X27.2 Adjust tilt mechanism.
       _ N/A No tilt adjustment.
       _ No adjustment performed.

   _ Adjustment performed.
     Steering wheel moved ____ detent positions Upward/Downward.
     (circle one)
     Steering wheel moved ___ degrees Upward/Downward

X27.3 Adjust Seat in the aft direction.
       _ No Adjustment performed.

   _ Seat moved aft ____ mm from original position.
   _ Seat moved aft ____ detent positions from the original position.

X28. Measure and set the pelvic angle using the pelvic angle gage TE-2504. The pelvic
      angle should be 20.0 degrees ± 2.5 degrees. If the pelvic angle cannot be set to the
      specified range because the head will not be level, adjust the pelvis as closely as
      possible to the angle range, but keep the head level.
       _ Pelvic angle set to 20.0 degrees ± 2.5 degrees.
       _ Pelvic angle of 20.0 degrees not achieved, the angular difference was minimized.
       _ Record the pelvic angle. _____ 21.0 _____ degrees
X 29. Check the dummy for contact with the interior after completing adjustments.
   X No contact.
   _ Dummy in contact with interior.
     _ Seat moved aft ___ mm from the previous position.
     _ Seat moved aft ___ detent positions from the previous position.

X 30. Check the dummy to see if additional interior clearance is obtained, allowing the seat to be moved forward.
   X N/A, Seat already at foremost position.
   _ Clearance unchanged. No adjustments required.
   _ Additional clearance available
     _ Seat moved Forward ___ mm from the previous position.
     _ Seat moved Forward ___ detent positions from the previous position.

X 31. Driver's foot positioning, right foot. Place the foot perpendicular to the leg and determine if the heel contacts the floor pan at any leg position. If the heel contacts the floor pan, proceed to step 32 otherwise, proceed to step 33.

_ 32. Perform the following steps until either all steps are completed, or the foot contacts the accelerator pedal. Step 32.6 shall be completed in all cases.

_ 32.1 With the rear of the heel contacting the floor pan, move the foot forward until pedal contact occurs or the foot is at the full forward position.

_ 32.2 If the vehicle has an adjustable accelerator pedal, move the pedals rearward until pedal contact occurs or the pedals reach the full rearward position.

_ 32.3 Extend the leg, allowing the heel to lose contact with the floor until the foot contacts the pedal. Do not raise the toe of the foot higher than the top of the accelerator pedal. If the foot does not contact the pedal, proceed to the next step. If pedal contact does occur, place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward.

_ 32.4 Angle the foot to achieve contact between the foot and the pedal. If the foot does not contact the pedal, return the foot to the perpendicular orientation. If pedal contact does occur, place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward.

_ 32.5 Align the centerline of the foot with the vertical-longitudinal plane passing through the center of the accelerator pedal. Place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward.

_ 32.6 Record foot position
   _ Pedal Contact achieved. Contact occurred at step ___.
     _ Heel contacts floor pan
     _ Heel set ___ mm from floor pan.

   _ Pedal Contact not achieved. Heel set ___ mm from the floor pan.
X33. Perform the following steps until either all steps are completed, or the foot contacts the accelerator pedal. Step 33.5 shall be completed in all cases.

X33.1 Extend the leg until the foot contacts the pedal. Do not raise the toe of the foot higher than the top of the accelerator pedal. If the foot does not contact the pedal, proceed to the next step. If pedal contact does occur, place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward.

X33.2 If the vehicle has an adjustable accelerator pedal, move the pedals rearward until pedal contact occurs or the pedals reach the full rearward position. If pedal contact does occur, place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward.

X33.3 Angle the foot to achieve contact between the foot and the pedal. If the foot does not contact the pedal, return the foot to the perpendicular orientation. If pedal contact does occur, place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward.

X33.4 Align the centerline of the foot in the same horizontal plane as the centerline of the accelerator pedal. Place a tapered foam block as shown in Figure G1 under the heel with the shallow part of the taper facing forward.
X 33.5 Record foot position
   X Pedal Contact achieved. Contact occurred at step 33.1.
   X Heel set 84 mm from floor pan.

   ___ Pedal Contact not achieved. Heel set ____ mm from the floor pan.

X 34. Driver’s foot positioning, left foot.

X 34.1 Place the foot perpendicular to the leg and determine if the heel contacts the floor pan at any leg position. If the heel contacts the floor pan proceed to step 34.2, otherwise position the leg as perpendicular to the thigh as possible with the foot parallel to the floor pan.

X 34.2 Place the foot on the toe board with the heel resting on the floor pan as close to the intersection of the floor pan and the toe board as possible. Adjust the angle of the foot if necessary to contact the toe board. If the foot will not contact the toe board, set the foot perpendicular to the leg, and set the heel on the floor pan as far forward as possible. Do not place the foot on the wheel well projection or footrest. If the pedals interfere with the placement of the foot, reposition the foot by rotating the foot about the leg, or rotate the leg outboard about the hip if necessary.
   ___ Foot rotated about the leg
   ___ Foot rotated about the leg, and the leg rotated about the hip.
   X No pedal interference

X 34.3 Record foot position.
   ___ Heel does not contact floor pan.
   ___ Foot placed on toe board.
   X Foot placed on floor pan.

X 35. Driver arm/hand positioning.

X 35.1 Place the dummy’s upper arms adjacent to the torso with the arm centerlines as close to a vertical longitudinal plane as possible. (S16.3.2.3.1)

X 35.2 Place the palms of the dummy in contact with the outer part of the steering wheel rim at its horizontal centerline with the thumbs over the steering wheel rim. (S16.3.2.3.2)

X 35.3 If it is not possible to position the thumbs inside the steering wheel rim at its horizontal centerline, then position them above and as close to the horizontal centerline of the steering wheel rim as possible. (S16.3.2.3.3)

X 35.4 Lightly tape the hands to the steering wheel rim so that if the hand of the test dummy is pushed upward by a force of not less than 9 N (2 lb) and not more than 22 N (5 lb), the tape releases the hand from the steering wheel rim. S16.3.2.3.4

X 36. Adjustable head restraints
   ___ N/A, there is no head restraint adjustment

NA 36.1 If the head restraint has an automatic adjustment, leave it where the system positions the restraint after the dummy is placed in the seat. (S16.3.4.1) Go to 37.
X 36.2 Adjust each head restraint vertically so that the horizontal plane determined in item 3 of Data Sheet 14 is aligned with the center of gravity (CG) of the dummy head. (S16.3.4.3)

X 36.3 If the above position is not attainable, move the vertical center of the head restraint to the closest detent below the center of the head CG. (S16.3.4.3)
   __ N/A midpoint position attained in previous step
   __ Headrest set at nearest detent below the head CG

X 36.4 If the head restraint has a fore and aft adjustment, place the restraint in the foremost position or until contact with the head is made, whichever occurs first. (S16.3.4.4)

X 37. Driver and passenger manual belt adjustment (for tests conducted with a belted dummy). (S16.3.5) Unbelted Test

___ 37.1 If an adjustable seat belt D-ring anchorage exists, place it in the manufacturer's design position for a 5th percentile adult female.
   This information will be supplied by the COTR.
   Manufacturer's specified position ________________________________
   Actual Position ________________________________

___ 37.2 Place the Type 2 manual belt around the test dummy and fasten the latch. (S16.3.5.2)

___ 37.3 Ensure that the dummy's head remains as level as possible. (S16.3.5.3)

___ 37.4 Remove all slack from the lap belt. Pull the upper torso webbing out of the retractor and allow it to retract; repeat this operation four times. Apply a 9 N (2 lbf) to 18 N (4 lbf) tension load to the lap belt. If the belt system is equipped with a tension-relieving device, introduce the maximum amount of slack into the upper torso belt that is recommended by the manufacturer. If the belt system is not equipped with a tension-relieving device, allow the excess webbing in the shoulder belt to be retracted by the retractive force of the retractor. (S16.3.5.4)

REMARKS:

I certify that I have read and performed each instruction.

(Check this item ONLY if it applies to this vehicle.)

The passenger seat adjustments are controlled by the adjustments made to the driver’s seat. Therefore, positioning of the passenger dummy is made simultaneously with the driver dummy. Adjustments made to the seat to position the driver will over ride any adjustments that would normally be made to position the passenger. (S16.2.10.3)

X 1. Position the seat’s adjustable lumbar supports so that the lumbar supports are in the lowest, retracted or deflated adjustment position. (S16.2.10.1)
   _ N/A – No lumbar adjustment

X 2. Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S16.2.10.2)
   _ N/A – No additional support adjustment

X 3. If the seat cushion adjusts fore and aft, independent of the seat back, set this adjustment to the full rearward position. (S16.2.10.3.1)
   _ N/A – No independent fore-aft seat cushion adjustment

X 4. Use the seat markings determined during the completion of Data Sheet 14 to set the rearmost fore-aft position, mid-height position and the seat cushion mid-angle. (S16.3.3.1.1)

X 5. Fully recline the seat back. (S16.3.3.1.2)
   _ N/A seat back not adjustable.

X 6. Place the dummy in the seat with the legs at an angle of 120 degrees to the thighs. The calves should not be touching the seat cushion. (S16.3.3.1.2)

X 7. Position the dummy in the seat such that the midsagittal plane is coincident with the longitudinal seat cushion marking that was determined in item 2.19 of Data Sheet 14 (S16.3.3.1.3 and S16.3.3.1.4)

X 8. Hold down the dummy’s thighs and push rearward on the upper torso to maximize the pelvic angle. (S16.3.3.1.5)

X 9. Set the angle between the legs and the thighs to 120 degrees. (S16.3.3.1.6)
10. Set the transverse distance between the centers of the front of the knees at 160 to 170 mm (6.3 to 6.7 inches) Center the knee separation with respect to the longitudinal seat cushion marking that was determined in item 2.19 of Data Sheet 14. (S16.3.3.1.8) Record Knee Separation 185 mm

11. Push rearward on the dummy's knees until the pelvis contacts the seat back, or the backs of the calves contact the seat cushion, whichever occurs first. (S16.3.3.1.8)
- Pelvis contacted seat back.
- Calves contacted seat cushion.

12. Gently rock the upper torso ± 5 degrees (approximately 51 mm (2 inches)) side-to-side three times. (S16.3.3.1.7)

13. If needed, extend the legs until the feet do not contact the floor pan. The thighs should be resting on the seat cushion. (S16.3.3.1.8)

14. Use seat controls to line up the seat markings determined during the completion of Data Sheet 14 to set the foremost fore-aft position, mid-height position and the seat cushion mid-angle. If the dummy contacts the interior move the seat rearward until a maximum clearance of 5 mm (0.2 inches) is achieved or the seat is in the closest detent position that does not cause dummy contact. (S16.3.3.1.8)
- Foremost, mid-height position and the seat cushion mid-angle reached
  - Dummy contact. Clearance set at maximum of 5 mm
  - Measured Clearance

- Dummy Contact. Seat set at nearest detent position.
  Seat position ___ detent positions rearward of foremost
  (Foremost is position zero)

15. If the seat back is adjustable, rotate the seat back forward while holding the thighs in place. Continue rotating the seat back forward until the transverse instrument platform of the dummy head is level ± 0.5 degrees. If head cannot be leveled using the seat back adjustment, or the seat back is not adjustable, use the lower neck bracket adjustment to level the head. If a level position cannot be achieved, adjust the head as closely as possible to the ± 0.5 degree range. (S16.3.3.1.8 and S16.3.3.1.10)
  (Check All That Apply)
  - Seat back not adjustable

  - Seat back not independent of driver side seat back

- Head Level Achieved. (Check all that apply)
  - Head leveled using the adjustable seat back
    - Head leveled using the neck bracket
      - Head Angle _____0.1______ degrees
  - Head Level NOT Achieved. (Check all that apply)
    - Head adjusted using the adjustable seat back
    - Head adjusted using the neck bracket
      - Head Angle ____________ degrees
X 16. Verify the pelvis is not interfering with the seat bight. (S16.3.3.1.9)
   X No Interference
   _Pelvis moved forward the minimum amount so that it is not caught in the seat bight.

X 17. Verify the dummy abdomen is properly installed. (S16.3.3.1.9)
   X Abdomen still seated properly into dummy
   _Abdomen was adjusted because it was not seated properly into dummy

X 18. Head Angle
   X N/A, neither the pelvis nor the abdomen were adjusted.

X 18.1 Head still level (Go to 19)

   _18.2 Head level adjusted
      _Head Level Achieved. (Check all that apply)
      _Head leveled using the adjustable seat back
      _Head leveled using the neck bracket.
      Head Angle ____________ degrees

      _Head Level NOT Achieved. (Check all that apply)
      _Head adjusted using the adjustable seat back
      _Head adjusted using the neck bracket.
      Head Angle ____________ degrees

X 19. Measure and set the pelvic angle using the pelvic angle gage TE-2504. The pelvic angle should be 20.0 degrees ± 2.5 degrees. If the pelvic angle cannot be set to the specified range because the head will not be level, adjust the pelvis as closely as possible to the angle range, but keep the head level.
   X Pelvic angle set to 20.0 degrees ± 2.5 degrees.
   _Pelvic angle of 20.0 degrees not achieved, the angular difference was minimized.
   _Record the pelvic angle. ___________ degrees

X 20. Check the dummy for contact with the interior after completing adjustments.
   X No contact.
   _Dummy in contact with interior.
      _Seat moved aft __________ mm from the previous position.
      _Seat moved aft __________ detent positions from the previous position.

X 21. Verify the transverse instrument platform of the dummy head is level +/- 0.5 degrees. Use the lower neck bracket adjustment to level the head. If a level position cannot be achieved, minimize the angle. (S16.3.3.1.9, S16.3.3.1.10, and S16.3.3.1.11)
   X Head Level Achieved
      Head Angle ___________ degrees
   _Head Level NOT Achieved.
      Head Angle ___________ degrees
X 22. Check the dummy to see if additional interior clearance is obtained, allowing the seat to be moved forward. (S16.3.3.1.12)
   _N/A Bench Seat
   _N/A Seat already at full forward position.
   X Clearance unchanged. No adjustments required.
   _Additional clearance available
   __Seat moved Forward ___ mm from the previous position.
   __Seat moved Forward ___ detent positions from the previous position.
   __Seat moved Forward, Full Forward position reached.

X 23. Passenger foot positioning. (Indicate final position achieved) (S16.3.3.2)

   _23.1 Place feet flat on the toe board; OR

   X 23.2 If the feet cannot be placed flat on the toe board, set the feet perpendicular to the lower leg, and rest the heel as far forward on the floor pan as possible; OR
   _23.3 If the heels do not touch the floor pan, set the legs to vertical and set the feet parallel to the floor pan.

X 24. Passenger arm/hand positioning. (S16.3.3.3)

   X 24.1 Place the dummy’s upper arms adjacent to the torso with the arm centerlines as close to a vertical longitudinal plane as possible. (S16.3.2.3.1)

   X 24.2 Place the palms of the dummy in contact with the outer part of the thighs (S16.3.3.3.2)

   X 24.3 Place the little fingers in contact with the seat cushion. (S16.3.3.3.3)

X 25. Adjustable head restraints
   _N/A, there is no head restraint adjustment

   _N/A 25.1 If the head restraint has an automatic adjustment, leave it where the system positions the restraint after the dummy is placed in the seat. (S16.3.4.1) Go to 26.

   X 25.2 Adjust each head restraint vertically so that the horizontal plane determined in item 3 of Data Sheet 14 is aligned with the center of gravity (CG) of the dummy head. (S16.3.4.3)

   X 25.3 If the above position is not attainable, move the vertical center of the head restraint to the closest detent below the center of the head CG. (S16.3.4.3)
   __N/A midpoint position attained in previous step
   __Headrest set at nearest detent below the head CG

   _25.4 If the head restraint has a fore and aft adjustment, place the restraint in the foremost position or until contact with the head is made, whichever occurs first. (S16.3.4.4)

X 26. Manual belt adjustment (for tests conducted with a belted dummy) S16.3.5
   _X N/A, Unbelted test
26.1 If an adjustable seat belt D-ring anchorage exists, place it in the manufacturer's design position for a 5th percentile adult female. This Information will be supplied by the COTR.
Manufacturer's specified position
Actual Position

26.2 Place the Type 2 manual belt around the test dummy and fasten the latch. (S16.3.5.2)

26.3 Ensure that the dummy's head remains as level as possible. (S16.3.5.3)

26.4 Remove all slack from the lap belt. Pull the upper torso webbing out of the retractor and allow it to retract; repeat this operation four times. Apply a 9 N (2 lbf) to 18 N (4 lbf) tension load to the lap belt. If the belt system is equipped with a tension-relieving device, introduce the maximum amount of slack into the upper torso belt that is recommended by the manufacturer. If the belt system is not equipped with a tension-relieving device, allow the excess webbing in the shoulder belt to be retracted by the retractive force of the retractor. (S16.3.5.4)

</table>

**X.1.** If the seat is a bench seat for which there are no independent adjustments that can be made, Go to step 7.

**X.2.** Position the seat's adjustable lumber supports so that the lumber support is in its lowest, retracted or deflated adjustment position. (S8.1.3)  
N/A – No lumbar adjustment

**X.3.** Position any adjustable parts of the seat that provide additional support so that they are in the lowest or most open adjustment position. (S20.1.8.2)  
N/A – No additional support adjustment

**X.4.** If the seat cushion adjusts fore and aft, independent of the seat back, set this adjustment to the full rearward position. (S20.1.9.3)  
N/A – No independent fore-aft seat cushion adjustment

**X.5.** If the seat and/or seat cushion height is adjustable, put the seat in the full down height position. (S8.1.2)  
N/A – No seat height adjustment

**X.6.** Using only the controls that move the seat in the fore-aft direction, place the seat in the rearmost position. (S8.1.2)

**X.7.** The seat back angle, if adjustable, is set at the manufacturer's nominal design riding position for a 50th percentile adult male in the manner specified by the manufacturer. (S4.5.4.1 (b) and S8.1.3)  
N/A – No seat back angle adjustment  
Manufacturer’s design seat back angle  
Tested seat back angle  
5.5° on seat back

**X.8.** If adjustable, set the head restraint at the full up and full forward position. Any adjustment of the head restraint shall be used to position it full forward. For example, if it rotates, rotate it such that the head restraint extends as far forward as possible. (S8.1.3)  
N/A – No head restraint adjustment

**X.9.** Place any adjustable seat belt anchorages at the vehicle manufacturer’s nominal design position for a 50th percentile adult male occupant (S8.1.3)  
N/A – No adjustable upper seat belt anchorages  
Manufacturer’s specified anchorage position  
Tested anchorage position
X 10. Place the dummy in the seat such that the midsagittal plane is vertical and coincides with the vertical longitudinal plane that passes through the SgRP and is parallel to the longitudinal centerline of the vehicle and the upper torso rests against the seat back.

X 11. Rest the thighs on the seat cushion. (S10.5)

X 12. Position the H-point of the dummy within 0.5 inch of the vertical dimension and 0.5 inch of the horizontal dimension of a point 0.25 inch below the H-point determined by using the equipment and procedures specified in SAE J826 (APR 1980). (S10.4.2.1) Then measure the pelvic angle with respect to the horizontal using the pelvic angle gage. Adjust the dummy position until these three measurements are within the specifications. (S10.4.2.1 and S10.4.2.2)

25 horizontal inches from the point 0.25 below the determined H-point (0.5 inch max.) (S10.4.2.1)
36 vertical inches from the point 0.25 below the determined H-point (0.5 inch max.) (S10.4.2.1)
24.9° pelvic angle (20° to 25°)

X 13. Is the head level within ± 0.5°? (S10.1)
   __Yes, go to 14
   __No, go to 13.1

   13.1 Adjust the position of the H-point. (S10.1 and S10.4.2.1)

   13.2 Is the head level within ± 0.5°? (S10.1)
       __Yes, record the following, then go to 13. __No, go to 12.3 (Same as 12)
       __horizontal inches from the point 0.25 below the determined H-point (0.5 inch max.) (S10.4.2.1)
       __vertical inches from the point 0.25 below the determined H-point (0.5 inch max.) (S10.4.2.1)
       __pelvic angle (20° to 25°) (S10.4.2.2)

   13.3 Adjust the pelvic angle. (S10.1)

   13.4 Is the head level within ± 0.5°? (S10.1)
       __Yes, record the following, then go to 13. __No, go to 12.5
       __horizontal inches from the point 0.25 below the determined H-point (0.5 inch max.) (S10.4.2.1)
       __vertical inches from the point 0.25 below the determined H-point (0.5 inch max.) (S10.4.2.1)
       __pelvic angle (20° to 25°) (S10.4.2.2)

   13.5 Adjust the neck bracket of the dummy the minimum amount necessary from the non-adjusted "0" setting until the head is level within ± 0.5°. (S10.1)
   Record the following, then go to 13
       __horizontal inches from the point 0.25 below the determined H-point (0.5 inch max.) (S10.4.2.1)
       __vertical inches from the point 0.25 below the determined H-point (0.5 inch max.) (S10.4.2.1)
       __pelvic angle (20° to 25°) (S10.4.2.2)
X 14. Set the distance between the outboard knee clevis flange surfaces at 10.8 inches. 
    10.8" measured distance (Seat track and center console interfere) (S10.5)

X 15. Check only one of the following that applies:
    ___ Outboard seating position
    Keeping the right thigh and leg in a vertical plane and the left thigh and leg in a vertical 
    plane, place the feet flat on the floorpan and beneath the front seat as far as possible 
    without front seat interference. If necessary, the distance between the knees can be 
    changed in order to place the feet beneath the seat. Record new distance between the 
    outboard knee clevis flange surfaces if knees have been repositioned.
    ___ measured distance (inches)

X 15 Center seating position
    Keeping the left thigh and leg in a vertical plane, place the left foot flat on the floorpan on 
    the left side of the transmission tunnel (if present). Keeping the right thigh and leg in a 
    vertical plane, place the right foot flat on the floorpan on the right side of the 
    transmission tunnel. If necessary, the distance between the knees can be changed in 
    order to place the feet flat on the floor. If possible, the knees should remain as close to 
    the distance as measured in #14 above. Record new distance between the outboard 
    knee clevis flange surfaces if knees have been repositioned. 425mm / 16.73" measured 
    distance (inches)

X 16. Place the left upper arm in contact with the seat back and side of the torso. (S10.2.2)

X 17. Is the passenger seat belt used for this test?
    ___ Yes, continue
    ___ No, go to 18

X 17.1 Fasten the seat belt around the dummy.

X 17.2 Remove all slack from the lap belt portion. (S10.9)

X 17.3 Pull the upper torso webbing out of the retractor and allow it to retract; repeat this four 
    times. (S10.9)

X 17.4 Apply a 2 to 4 pound tension load to the lap belt. (S10.9)
    2 pound load applied

X 17.5 Is the belt system equipped with a tension relieving device?
    ___ Yes, continue
    ___ No, go to 18

X 17.6 Introduce the maximum amount of slack into the upper torso belt that is recommended by 
    the vehicle manufacturer in the vehicle owner's manual. (S10.9). Go to 17.

X 18. Place the right upper arm in contact with the seat back and side of the torso. (S10.2.2)

X 19. Place the left hand palm in contact with the outside of the left thigh and the little finger in 
    contact with the seat cushion. (S10.3.2)

X 20. Place the right hand palm in contact with the outside of the right thigh and the little finger 
    in contact with the seat cushion. (S10.3.2)

1. Vehicle underbody painted
2. The speed measuring devices are in place and functioning.
3. The speed measuring devices are 1.0 m from the barrier (spec. 1.5m) and 30 cm from the barrier (spec. is 30 cm)
4. Convertible top is in the closed position.
5. N/A, not a convertible
6. Instrumentation and wires are placed so the motion of the dummies during impact is not affected.
7. Tires inflated to pressure on tire placard or if it does not have a tire placard because it is not a passenger car, then inflated to the tire pressure specified in the owner information.

231 kpa front left tire
231 kpa front right tire
231 kpa rear left tire
231 kpa rear right tire
231 kpa specified on tire placard or in owner information
231 kpa specified on tire placard or in owner information
231 kpa specified on tire placard or in owner information
231 kpa specified on tire placard or in owner information

8. Time zero contacts on barrier in place.
9. Pre test zero and shunt calibration adjustments performed and recorded
10. Dummy temperature meets requirements of section 12.2 of the test procedure.
11. Vehicle hood closed and latched
12. Transmission placed in neutral
13. Parking brake off
14. Ignition in the ON position
15. Doors closed and latched but not locked
16. Post test zero and shunt calibration checks performed and recorded
17. Actual test speed 39.8 kmph
18. Vehicle rebound from the barrier 58.1 cm
19. Describe whether the doors open after the test and what method is used to open the doors.

X Left Front Door: Door remained closed and latched; Door opened without tools
X Right Front Door: Door remained closed and latched; Door opened without tools
X Left Rear Door: Door remained closed and latched; Door opened without tools
19. Describe the contact points of the dummy with the interior of the vehicle.

- Driver Dummy: Head to Air Bag and Headliner/Visor; Chest and Abdomen to Air Bag; Knees to Knee Bolster
- Passenger Dummy: Head to Air Bag and Sunvisor; Chest and Abdomen to Air Bag; Knees to Glove Box
- Center Rear Passenger Dummy: Back of Head to Headrest; Left Knee to Center Console

1. Pre-Crash

1.1 Describe from visual inspection how the windshield is mounted and describe any trim material.

Retained with glue
Rubber trim

2. Post Crash

2.1 Can a single thickness of copier type paper (as small a piece as necessary) slide between the windshield and the vehicle body?

X No – Pass. Skip to the table of measurements, complete it by repeating the pre-crash measurements in the post crash column, and calculate the retention percentage, which will be 100%.

Yes, go to 2.2

2.2 Visibly mark the beginning and end of the portions of the periphery where the paper slides between the windshield and the vehicle body.

2.3 Measure and record post-crash A, B, C, D, E, and F such that the measurements do not include any of the parts of the windshield where the paper slides between the windshield and the vehicle body.

2.4 Calculate and record the percent retention for the right and left side of the windshield.

2.5 Is total right side percent retention less than 75%?

Yes, Fail
No, Pass

2.6 Is total left side percent retention less than 75%?

Yes, Fail
No, Pass
