ROOM 6111 (NVS-220)
WASHINGTON, D.C. 20590
This publication is distributed by the U.S. Department of Transportation, National Highway Traffic Safety Administration, in the interest of information exchange. The opinions, findings and conclusions expressed in this publication are those of the author(s) and not necessarily those of the Department of Transportation or the National Highway Traffic Safety Administration. The United States Government assumes no liability for its contents or use thereof. If trade or manufacturers' names or products are mentioned, it is only because they are considered essential to the object of the publication and should not be construed as an endorsement. The United States Government does not endorse products or manufacturers.
Compliance tests were conducted on the subject, 2006 Mitsubishi Eclipse Passenger Car in accordance with the specifications of the Office of Vehicle Safety Compliance Test Procedure No. TP-103-13 for the determination of FMVSS 103 compliance. Test failures identified were as follows: None

SECTION 1

PURPOSE OF COMPLIANCE TEST

1.0  PURPOSE OF COMPLIANCE TEST

A 2006 Mitsubishi Eclipse Passenger Car was subjected to Federal Motor Vehicle Safety Standard (FMVSS) No. 103 testing to determine if the vehicle was in compliance with the requirements of the standard. All tests were conducted in accordance with NHTSA, Office of Vehicle Safety Compliance (OVSC) Laboratory Procedure, TP-103-13 dated 26 June 1996 and General Testing Laboratories, Inc. (GTL) Test Procedure, “Windshield Defrosting and Defogging Systems – Passenger Vehicles, Multitpurpose Vehicles, Trucks and Buses”.

1.1  TEST VEHICLE

The test vehicle was a 2006 Mitsubishi Eclipse Passenger Car. Nomenclature applicable to the test vehicle are:

A.  Vehicle Identification Number: 4A3AK24FX6E018863

B.  NHTSA No.: C65600

C.  Manufacturer: MITSUBISHI MOTORS NORTH AMERICA, INC.

D.  Manufacture Date: 08/05

1.2  TEST DATE

The test vehicle was subjected to FMVSS No. 103 testing on May 24-25, 2006.
SECTION 2

COMPLIANCE TEST PROCEDURE AND SUMMARY OF RESULTS

2.0 GENERAL

The 2006 Mitsubishi Eclipse 2-door passenger car, NHTSA No. C65600 was subjected to FMVSS No. 103 tests on May 24-25, 2006. Photographs of the test vehicle are shown in Figures 5.1 through 5.4. The manufacturer’s certification and tire information labels are shown in Figures 5.5 and 5.6. The test instrumentation and instrument panel setups are depicted in Figures 5.7 and 5.8. Figures 5.9 through 5.16 depict the windshield pre and post test defrost conditions.

2.1 TEST PROCEDURE

Prior to test the test vehicle was inspected for completeness, systems operability, and appropriate fuel and liquid levels, i.e., oil and coolant to include antifreeze protection. The vehicle was then photographically documented as required by the DOT/NHTSA test procedure. The windshield patterns for areas A, B and C had been furnished prior to testing and these areas were outlined on the windshield with a marker. The vehicle was then installed in the cold chamber and pre-conditioned for a 14-hour minimum, 0º ±5º F temperature soak for the first test run. After the pre-condition, the hood was raised to assure engine coolant and lubricant were stabilized within the test temperature range for a minimum of 2 hours.

At the end of the 2-hour minimum stabilization period, the entire windshield was sprayed evenly with 0.010 ounces of water per square inch of glass area. Refer to Section 3, Compliance Test Data, for test specifics such as total amount of water sprayed, spray gun identification, and air pressure regulation. The vehicle soak continued for an additional 30 minutes minimum but no more than 40 minutes after the windshield was sprayed.

At the conclusion of the additional soak time the vehicle’s engine was started and operated at a target speed of 1500-1600 rpm or at the manufacturer’s specification if different as noted on data sheets. The defroster blower was turned on to the high speed setting with the heater selector in the de-ice (defrost) position, and the temperature control in the maximum temperature position. All doors and windows were closed. The heater air intake was fully open and the vehicle’s hood closed. At no time during the test were the windshield wipers used.
At start of testing and during test, at each 5-minute interval after engine start, cold chamber, engine coolant, heater coolant in and defroster air left/defroster air right temperatures were recorded. Likewise at each 5-minute interval the boundary of the defrosted area was marked on the inside surface of the windshield. The test was run for a maximum of 40 minutes from engine start, or until such time as 100 percent windshield clearance was achieved. Photographs were made of the windshield at the pre-test frosted state and 20-minute and 25-minute intervals. Post test actions included placing a vellum pattern on the windshield and tracing the windshield’s 5-minute interval defrosted area boundary lines onto the vellum pattern.

After the traces were obtained, the windshield was again thoroughly cleaned and the vehicle engine coolant and lubricant stabilization period at 0° ±5° F temperature commenced for a repeat of the procedure discussed. The windshield patterns for both tests were used subsequently to determine the cleared area percentages.

2.2 SUMMARY OF RESULTS

Based on the test performed, the test vehicle appears to be in compliance with the requirements of FMVSS 103.
SECTION 3

COMPLIANCE TEST DATA

3.0 TEST RESULTS

The following data sheets document the results of testing on the 2006 Mitsubishi Eclipse.
SUMMARY DATA SHEET
FMVSS 103, WINDSHIELD DEFROSTING AND DEFOGGING SYSTEMS

VEH. MOD YR/MAKE/MODEL/BODY: 2006 MITSUBISHI ECLIPSE PASSENGER CAR
VEH. NHTSA NO: C65600; VIN: 4A3AK24FX6E018863
VEH. BUILD DATE: 08/05 TEST DATE: MAY 24-25, 2006

Defrosting or defogging the windshield and door windows

⚠️ CAUTION
- For safety, make sure you have a clear view through all the windows.

To remove frost or fog from the windshield and door windows, use the mode selection dial (“☀️” or “🌡”).

For ordinary defrosting
Use this setting to keep the windshield and door windows clear of mist, and to keep the leg area heated (when driving in rain or snow).

1. Set the mode selection dial to the “☀️” position.
2. Select your desired blower speed by turning the blower speed selection dial.
3. Select your desired temperature by turning the temperature control dial.
Comfort controls

For quick defrosting

1. Set the mode selection dial to the "\(\text{\smash{\text{\textregistered}}}\)" position.
2. Set the blower to the maximum speed.
3. Set the temperature to the highest position.

NOTE

- When the mode selection dial is set to the "\(\text{\smash{\text{\textregistered}}}\)" or "\(\text{\textregistered}{\text{\textregistered}}\)" position, the air conditioning compressor runs automatically. The outside air position will be selected automatically. (In this case, the air conditioning indicator light will not change.)
- When the "\(\text{\smash{\text{\textregistered}}}\)" or "\(\text{\textregistered}{\text{\textregistered}}\)" position is selected, you cannot turn the air conditioning off or use the recirculation position. This prevents the windows from fogging up.
- When defrosting, do not set the temperature control dial near the "MAX A/C" position. This would blow cool air on the window glass and fog it up.
