1.0 PURPOSE OF COMPLIANCE TEST

A 2006 Subaru B9 Tribeca MPV was subjected to Federal Motor Vehicle Safety Standard (FMVSS) No. 214 testing to determine if the vehicle was in compliance with the requirements of the standard. FMVSS No. 214 establishes requirements for the side doors of a Motor Vehicle to minimize the safety hazard caused by intrusion into the passenger compartment as a result of a side impact accident.

1.1 TEST VEHICLE

The test vehicle was a 2006 Subaru B9 Tribeca MPV. Nomenclature applicable to the test vehicle are:

A. Vehicle Identification Number: 4S4WX82C764409296

B. NHTSA No.: C65501

C. Manufacturer: FUJI HEAVY INDUSTRIES LTD.

D. Manufacture Date: 07/05

The vehicle’s front and rear seating systems were removed for this test. All vehicle windows were closed and all doors were locked for this test.

1.2 TEST DATE

The test vehicle was subjected to FMVSS No. 214 testing on June 30, 2006.
SECTION 2
TEST PROCEDURE AND SUMMARY OF RESULTS

2.0 TEST PROCEDURE

All tests were conducted in accordance with NHTSA, Office of Vehicle Safety Compliance (OVSC) Laboratory Procedure, TP-214S-05 dated 14 September 1993 and General Testing Laboratories, Inc. (GTL) Test Procedure, TP-214S-05, "Static – Side Impact Protection".

Each vehicle shall be able to meet the requirements of either, at the manufacturer's option, 2.1 or 2.2 when any of its side doors that can be used for occupant egress are tested.

2.1 OPTION ONE

With any seats that may affect load upon or deflection of the side of the vehicle removed from the vehicle, each vehicle must be able to meet the requirements of 2.1.1 through 2.1.3.

2.1.1 INITIAL CRUSH RESISTANCE

The initial crush resistance shall not be less than 2,250 pounds.

2.1.2 INTERMEDIATE CRUSH RESISTANCE

The intermediate crush resistance shall not be less than 3,500 pounds.

2.1.3 PEAK CRUSH RESISTANCE

The peak crush resistance shall not be less than two times the curb weight of the vehicle or 7,000 pounds, whichever is less.

2.2 OPTION TWO

With seats installed in the vehicle, and located in any horizontal or vertical position to which they can be adjusted and at any seat back angle to which they can be adjusted, each vehicle must be able to meet the requirements of 2.2.1 through 2.2.3.

2.2.1 INITIAL CRUSH RESISTANCE

The initial crush resistance shall not be less than 2,250 pounds.

2.2.2 INTERMEDIATE CRUSH RESISTANCE

The intermediate crush resistance shall not be less than 4,375 pounds.
SECTION 2 CONTINUED

2.2.3 PEAK CRUSH RESISTANCE

The peak crush resistance shall not be less than three and one half times the curb weight of the vehicle or 12,000 pounds, whichever is less.
SECTION 3
COMPLIANCE TEST DATA
DATA SHEET 1
TEST VEHICLE RECEIVING-INSPECTION

VEH. MOD YR/MAKE/MODEL/BODY: 2006 SUBARU B9 TRIBECA MPV
VEH. NHTSA NO.: C65501; VIN: 4S4WX2C764409296
VEH. BUILD DATE: 07/05; TEST DATE: JUNE 30, 2006
TEST LABORATORY: GENERAL TESTING LABS
OBSERVERS: G. FARRAND, J. LATANE, J. GIBSON

A. First compliance test by laboratory for this vehicle is the static FMVSS 214 test.

  _  Yes     _  No (Go to item 2)

  X  (1) Label test vehicle with NHTSA Number

  X  (2) Verify all options on the "window sticker" are present on the vehicle

  X  (3) Verify tires and wheel rims are new and the same as listed

  X  (4) Verify there are no dents or other interior or exterior flaws

  X  (5) Verify the glove box contains an owner's manual, warranty document, consumer information, and extra keys

  X  (6) Verify the vehicle is equipped with the proper fuel filler cap

  X  (7) If the vehicle has been delivered from the dealer, verify the vehicle has been properly prepared and is in running condition

B. Verify seat adjusters are working

  _  Yes     _  No

C. Verify there is a seat belt at each seating position

  _  Yes     _  No

D. Without disturbing the integrity of each seat belt and anchorage, verify that each seat belt is attached to the anchorage. For seat belts that are attached to the seat, also verify the seats are attached to the seat anchors and the seat anchors are attached to the vehicle.

  _  Yes     _  No

E. Curb Weight of Vehicle: 4185 LBS.

F. COMMENTS: (Explain any problems here)

RECORDED BY: G. FARRAND DATE: 06/30/06
APPROVED BY: D. MESSICK
DATA SHEET 2
PRETEST PREPARATION

VEH. MOD YR/MAKE/MODEL/BODY: 2006 SUBARU B9 TRIBECA MPV
VEH. NHTSA NO.: C65501; VIN: 4S4WX82C764409296
VEH. BUILD DATE: 07/05; TEST DATE: JUNE 30, 2006
TEST LABORATORY: GENERAL TESTING LABS
OBSERVERS: G. FARRAND, J. LATANE, J. GIBSON

Prior to testing the following will be accomplished:

<table>
<thead>
<tr>
<th>TEST</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>X</td>
<td>X</td>
</tr>
<tr>
<td>2</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

A. Check the manufacturers certification statement to determine if the vehicle should be tested with or without seats installed. 

B. Remove all seats unless the vehicle has been certified with the seats installed. If the seats remain in the vehicle, they are to be adjusted per the COTR's instructions.

C. Close all windows

D. Lock All doors

E. State door tested

F. State the length of a horizontal line drawn on door through a point 5 inches vertically above lowest point of test door

G. State vertical distance from the lowest part of test door to bottom of loading device

H. State position of vertical centerline of loading device on the midpoint of line determined step F

I. Determine that the vertical axis of the loading device is perpendicular to the longitudinal and lateral axis of the test vehicle

J. Determine that the top of the loading device is above the door window opening but not touching any structure above the window opening

RECORDED BY: G. FARRAND DATE: 06/30/06

STATIC LOAD TEST - BACK-UP SYSTEM DATA

VEH. MOD YR/MAKE/MODEL/BODY: 2006 SUBARU B9 TRIBECA MPV
VEH. NHTSA NO.: C65501; VIN: 4S4WX82C764409296
VEH. BUILD DATE: 07/05; TEST DATE: JUNE30, 2006
TEST LABORATORY: GENERAL TESTING LABS
_OBSERVERS: G. FARRAND, J. LATANE, J. GIBSON

RESULTS: Plots of load versus displacement and time versus displacement obtained from the back-up data (attach plots to data sheet) showed that:

**TEST #1** - GTL #5587 (LEFT FRONT DOOR)

A. The initial crush resistance was 3251 lbs.

B. The intermediate crush resistance was 6686 lbs.

C. The peak crush resistance was 16,254 lbs at 10.30 inches

D. The rate of loading was .2"/sec

The dial indicator and the inclinometer showed the following deflections.

</tr>
</tbody>
</table>

**TEST #2** - GTL #5588 (RIGHT REAR DOOR)

A. The initial crush resistance was 2826 lbs.

B. The intermediate crush resistance was 5189 lbs.

C. The peak crush resistance was 14,367 lbs at 15.00 inches

D. The rate of loading was .2"/sec
The dial indicator and the inclinometer showed the following deflections.

<table>
<thead>
<tr>

</table>

NOTE: TEST #5587 WAS STOPPED AT 16,254 LBS. DUE TO LIMITATIONS OF TEST EQUIPMENT. THIS LOAD WAS 2.3 TIMES THE REQUIRED 7000 LB. LOAD.

RECORDED BY: G. FARRAND
DATE: 06/30/06

APPROVED BY: D. MESSICK
DATA SHEET 4  
DATA REDUCTION

VEH. MOD YR/MAKE/MODEL/BODY: 2006 SUBARU B9 TRIBECA MPV
VEH. NHTSA NO.: C65501; VIN: 4S4WX82C764409296
VEH. BUILD DATE: 07/05; TEST DATE: JUNE 29, 2006
TEST LABORATORY: GENERAL TESTING LABS
OBSERVERS: G. FARRAND, J. LATANE, J. GIBSON

Data from the primary data systems will be analyzed and the plots attached to the data sheet.

RESULTS - The load versus displacement plot showed that - -

**TEST #1** - GTL #5587 (LEFT FRONT DOOR)

A. The initial crush resistance was 3268 lbs.
B. The intermediate crush resistance was 6776 lbs.
C. The peak crush resistance was 16,307 lbs at 10.3 inches

The time versus displacement plot showed that - -

The rate of loading was .2"/sec

**TEST #2** - GTL #5588 (RIGHT REAR DOOR)

A. The initial crush resistance was 2829 lbs.
B. The intermediate crush resistance was 5231 lbs.
C. The peak crush resistance was 14,393 lbs at 15.00 inches

The time versus displacement plot showed that - -

The rate of loading was .2"/sec

Comparison of the ABOVE DATA with the BACKUP DATA indicates the following - -

Primary and Backup data agree.
