SECTION 1

PURPOSE OF COMPLIANCE TEST

1.0 PURPOSE OF COMPLIANCE TEST

A 2006 Subaru B9 Tribeca MPV was subjected to Federal Motor Vehicle Safety Standard (FMVSS) No. 225 testing to determine if the vehicle was in compliance with the requirements of the standard. The purpose of this standard is to establish requirements for child restraint anchorage systems to ensure their proper location and strength for the effective securing of child restraints, to reduce the likelihood of the anchorage systems’ failure and to increase the likelihood that child restraints are properly secured and thus more fully achieve their potential effectiveness in motor vehicles.

1.1 The test vehicle was a 2006 Subaru B9 Tribeca MPV. Nomenclature applicable to the test vehicle are:

A. **Vehicle Identification Number**: 4S4WX83C564403897

B. **NHTSA No.** C65500

C. **Manufacturer**: FUJI HEAVY INDUSTRIES LTD.

D. **Manufacture Date**: 05/05

1.2 TEST DATE

The test vehicle was subjected to FMVSS No. 225 testing during the time period August 2 through September 29, 2006.
SECTION 2

COMPLIANCE TEST RESULTS

2.0 TEST RESULTS

All tests were conducted in accordance with NHTSA, Office of Vehicle Safety Compliance (OVSC) Laboratory Procedures, TP-225-01 dated 11 April 2005.

Based on the test performed, the 2006 Subaru B9 Tribeca MPV appeared to meet the requirements of FMVSS 225 testing.
SECTION 3

COMPLIANCE TEST DATA

3.0 TEST DATA

The following data sheets document the results of testing on the 2006 Subaru B9 Tribeca MPV.
A. VISUAL INSPECTION OF TEST VEHICLE

Upon receipt for completeness, function, and discrepancies or damage which might influence the testing.

RESULTS: OK FOR TEST ON ROW 2 LEFT AND RIGHT SIDE SEATING POSITIONS. ROW 2 CENTER SEATING POSITION CANNOT BE TESTED DUE TO PRIOR DAMAGE TO THE ROOF MOUNTED BELT RETRACTOR MOUNTING FROM FMVSS 216 ROOF CRUSH TEST.

DATA SHEET 2
REQUIREMENTS FOR CHILD RESTRAINT ANCHORAGE SYSTEMS
AND TETHER ANCHORAGES

VEH. MOD YR/MAKE/MODEL/BODY: 2006 SUBARU B9 TRIBECA MPV
VEH. NHTSA NO: C65500; VIN: 4S4WX83C564403897
VEH. BUILD DATE: 05/05; TEST DATE: AUGUST 2, 2006
TEST LABORATORY: GENERAL TESTING LABORATORIES
OBSERVERS: GRANT FARRAND, JIMMY LATANE

Number of rows of seats: 2
Number of rear, forward-facing designated seating positions: 3
Number of required CRAS (lower anchorages only, for convertibles/school buses): 2
Number of required tether anchorages (can be additional CRAS): 3
Is the vehicle a convertible? NO
Is the vehicle a school bus? NO

Does the vehicle have a CRAS (lower anchorage only, for convertibles/school buses) installed at a front passenger seating position? NO
  If NO, skip to next question.
  If YES, does the vehicle have rear designated seating positions? YES
    If NO, does the vehicle have an air bag on-off switch or a special exemption for no passenger air bag?
      If NO = FAIL    If YES = PASS
    If Yes, does the vehicle meet the requirements of S4.5.4.1 (b) of S208 and have and air bag on-off switch or a special exemption for no passenger air bag? YES
      Record the distance between the front and rear seat back:
        If Distance < 720 mm and vehicle has an air bag on-off switch or special exemption = PASS
        If Distance ≥ 720 mm or no air bag on-off switch or no special exemption = FAIL

Does the vehicle have rear designated seating position(s) where the lower bars of a CRAS are prevented from being located because of transmission and/or suspension component interference? NO
  If NO, skip to next question.
  If YES, does the vehicle have a tether anchorage at a front passenger seating position?
    YES = PASS    NO = FAIL (S5(e))

Number of provided CRAS (lower anchorage only, for convertibles/school buses), indicate if a built-in child restraint is counted as a CRAS: 2

Is the number of provided CRAS (lower anchorages only, for convertible/school buses) greater than or equal to the number of required CRAS (lower anchorages only, for convertibles/school buses)? YES
  YES = PASS    NO = FAIL (S4.4(a) or (b) or (c))
If the vehicle has 3 or more rows of seats is a CRAS (lower anchorage only for convertibles/school buses) provided in the second row: N/A

YES = PASS  NO = FAIL (S4.4(a)(1))

Number of provided tether anchorages (can be additional CRAS) indicate if a built-in child restraint is counted as tether anchorage (NOTE: a built-in child restraint can only be counted toward either the required number of CRAS or tether anchorages, not both): 3

Is the number of provided tether anchorages greater than or equal to the number of required tether anchorages? YES

YES = PASS  NO = FAIL (S4.4 (a) or (b) or (c))

If the vehicle has 3 or more rear dspb and a non-outboard dsp, is a tether anchorage or CRAS provided at a non-outboard dsp? YES

YES = PASS  NO = FAIL (S4.4 (a)(2))

Are all tether and lower anchorages available for use at all times when the seat is configured for passenger use? YES

YES = PASS  NO = FAIL (S4.6 (b))

Provide a diagram showing the location of lower anchorages and/or tether anchorages.

X X X

DATA SHEET 3
LOCATION OF TETHER ANCHORAGES

VEH. MOD YR/MAKE/MODEL/BODY: 2006 SUBARU B9 TRIBECA MPV
VEH. NHTSA NO: C65500; VIN: 4S4WX83C564403897
VEH. BUILD DATE: 05/05; TEST DATE: AUGUST 2, 2006
TEST LABORATORY: GENERAL TESTING LABORATORIES
OBSERVERS: GRANT FARRAND, JIMMY LATANE

DESIGNATED SEATING POSITION: ROW 2 LEFT SIDE (DSP A)

Detailed description of the location of the tether anchorage:
Located on rear of seat back.

Based on visual inspection, is the tether anchorage within the shaded zone? YES
If YES = PASS, skip to next section
If NO, After constructing the shaded zone, is the tether anchorage within the shaded zone?

If YES = PASS, skip to next section
If NO, Is it possible to locate a tether anchorage within the shaded zone without removing a seating component?
   If YES = FAIL (S6.2.1)
   If NO, Is a tether routing device provided?
      If YES = PASS
      IF NO = FAIL (S6.2.1.2)

Is the tether anchorage recessed? YES
If NO, skip to next question
If YES, is it outside of the tether strap wraparound area? YES
   YES = PASS   NO = FAIL (S6.2.1)

Does the tether anchorage permit attachment of a tether hook? YES
   YES = PASS   NO = FAIL (S6.1(a))

Is the tether anchorage accessible without the need for any tools other than a screwdriver or coin? YES
   YES = PASS   NO = FAIL (S6.1(b))

After the tether anchorage is accessed, is it ready for use without the need for tools? YES
   YES = PASS   NO = FAIL (S6.1(c))

Is the tether anchorage sealed to prevent the entry of exhaust fumes into the passenger compartment? YES
   YES = PASS   NO = FAIL (S6.1(d))

If the DSP has a tether routing device, is it flexible or rigid? N/A
DATA SHEET 3 CONTINUED

DESIGNATED SEATING POSITION: ROW 2 LEFT SIDE (DSP A)

If the DSP has a flexible tether routing device, after installing SFAD2 record the tether strap tension: 
_____ N/A _____ (Must be 60 N ± 5 N)

If the DSP has a flexible tether routing device, record the horizontal distance between the torso 
reference plane and the routing device: _____ N/A _____ 
Greater than or equal to 65mm = PASS Less than 65mm = FAIL

If the DSP has a rigid tether routing device, record the horizontal distance between the torso 
reference plane and the routing device: _____ N/A ________
Greater than or equal to 100mm = PASS Less than 100mm = FAIL

PLOTS
APPENDIX A
OWNER’S MANUAL CHILD RESTRAINT INFORMATION
NOTE
If the front part of the vehicle is damaged in an accident to the extent that the seatbelt pretensioner does not operate, contact your SUBARU dealer as soon as possible.

- Precautions against vehicle modification
Always consult your SUBARU dealer if you want to install any accessory parts to your vehicle.

⚠️ CAUTION ⚠️
Do not perform any of the following modifications. Such modifications can interfere with proper operation of the seatbelt pretensioners.
- Attachment of any equipment (bush bar, winches, snow plow, skid plate, etc.) other than genuine SUBARU accessory parts to the front end.
- Modification of the suspension system or front end structure.

- Installation of a tire of different size and construction from the tires specified on the vehicle placard attached to the door pillar or specified for individual vehicle models in this Owner’s Manual.

Child restraint systems

While riding in the vehicle, infants and small children should always be placed in an infant or child restraint system in one of the rear seating positions recommended in this owner’s manual. You should use an infant or child restraint system that meets Federal Motor Vehicle Safety Standards or Canada Motor Vehicle Safety Standards, is compatible with your vehicle and is appropriate for the child’s age and size. All child restraint systems are designed to be secured in vehicle seats by lap belts or the lap belt portion of a lap/shoulder belt (except those covered under the section in this manual, entitled “Installation of child restraint systems by use of lower and teth-er anchorages (LATCH)”):
Children could be endangered in an accident if their child restraints are not properly secured in the vehicle. When installing the child restraint system, carefully follow the manufacturer’s instructions.

According to accident statistics, children are safer when properly restrained in the rear seating positions than in the front seating positions.

All U.S. states and Canadian provinces require that infants and small children be restrained in an approved child restraint system at all times while the vehicle is moving.

![Image of child restraints]

**WARNING**

Never let a passenger hold a child on his or her lap while the vehicle is moving. The passenger cannot protect the child from injury in a collision, because the child will be caught between the passenger and objects inside the vehicle. Additionally, holding a child in your lap or arms in the front seat exposes that child to another serious danger. Since the SRS airbag deploys with considerable speed and force, the child could be injured or even killed.

**WARNING**

Children should be properly restrained at all times. Never allow a child to stand up, or to kneel on any seat. Unrestrained children will be thrown forward during sudden stop or in an accident and can be injured seriously.

Additionally, children standing up or kneeling on or in front of the front seat are exposed another serious danger. Since the SRS airbag deploys with considerable speed and force, the child could be injured or even killed.

- Where to place a child restraint system

The following are SUBARU’s recommendations on where to place a child restraint system in your vehicle.

- CONTINUED -
A: Front passenger's seat
You should not install a child restraint system (including a booster seat) due to the hazard to children posed by the passenger's airbag.

B: Rear outboard seats (5-seater models)/second-row outboard seats (7-seater models)
Recommended positions for all types of child restraint systems.
In these positions, Automatic/Emergency Locking Retractor (A/ELR) seatbelts and lower anchorages (bars) are provided for installing a child restraint system.
Some types of child restraints might not be able to be secured firmly due to projection of the seat cushion.
In this seating position, you should use only a child restraint system that has a bottom base that fits snugly against the contours of the seat cushion and can be securely retained using the seatbelt.

C: Rear center seat (5-seater models)/second-row center seat (7-seater models)
Installing a child restraint system is not recommended, although the A/ELR seatbelt and an upper anchorage (tether anchorage) are provided in this position.
Some types of child restraints might not be able to be secured firmly due to projection of the seat cushion.
In this seating position, you should use only a child restraint system that has a bottom base that fits snugly against the contours of the seat cushion and can be securely retained using the seatbelt.

D: Third-row seat (7-seater models)
Installing a child restraint system is not recommended, although the A/ELR seatbelt and two upper anchorages (tether anchorages) are provided in these positions.
These seating positions are not equipped with lower anchorages (bars) for installing LATCH system-type child restraints. However, child restraint devices can be used in these positions using the A/ELR seatbelts and upper anchorages (tether anchorages) provided.

Some types of child restraints might not be able to be secured firmly due to projection of the seat cushion.
In this seating position, you should use only a child restraint system that has a bottom base that fits snugly against the contours of the seat cushion and can be securely retained using the seatbelt.

⚠️ WARNING
Put children aged 12 and under in the rear seat properly restrained at all times. The SRS airbag deploys with considerable speed and force and can injure or even kill children, especially if they are 12 years of age and under and are not restrained or improperly restrained. Because children are lighter and weaker than adults, their risk of being injured from deployment is greater.
For that reason, be sure to secure ALL types of child restraint devices (including forward facing child seats) in the REAR seats at all times. You should choose a restraint device which is appropriate for the child’s age, height and weight. According to accident statistics, children are safer when properly restrained in the rear seating positions than in the front seating positions.

**WARNING**

**SINCE YOUR VEHICLE IS EQUIPPED WITH A PASSENGER’S SRS AIRBAG, DO NOT INSTALL A REARWARD FACING CHILD SAFETY SEAT IN THE FRONT PASSENGER’S SEAT. DOING SO RISKS SERIOUS INJURY OR DEATH TO THE CHILD BY PLACING THE CHILD’S HEAD TOO CLOSE TO THE SRS AIRBAG.**

**Choosing a child restraint system**

Choose a child restraint system that is appropriate for the child’s age and size (weight and height) in order to provide the child with proper protection. The child restraint system should meet all applicable requirements of Federal Motor Vehicle Safety Standards for the United States or Canada Motor Vehicle Safety Standards for Canada. It can be identified by looking for the label on the child restraint system or the manufacturer’s statement of compliance in the document attached to the system. Also it is important for you to make sure that the child restraint system is compatible with the vehicle in which it will be used.

**Installing child restraint systems with A/ELR seatbelt**

**WARNING**

- Child restraint systems and seatbelts can become hot in a vehicle that has been closed up in sunny weather; they could burn a small child. Check the child restraint system before you place a child in it.

- CONTIUED -
- Do not leave an unsecured child restraint system in your vehicle. Unsecured child restraint systems can be thrown around inside of the vehicle in a sudden stop, turn or accident; they can strike and injure vehicle occupants as well as result in serious injuries or death to the child.

**CAUTION**

When you install a child restraint system, follow the manufacturer's instructions supplied with it. After installing the child restraint system, check to ensure that it is held securely in position. If it is not held tight and secure, the danger of your child suffering personal injury in the event of an accident may be increased.

1. Slide the seat or seat pair to its rearmost position.
2. Adjust the seatback to the upright position.
3. Place the child restraint system in the rear seating position.
4. Run the lap and shoulder belt through or around the child restraint system following the instructions provided by its manufacturer.
5. Insert the tongue plate into the buckle until you hear a click.

6. Take up the slack in the lap belt.
7. Pull out the seatbelt fully from the retractor to change the retractor over from the Emergency Locking Retractor (ELR) to the Automatic Locking Retractor (ALR) function. Then, allow the belt to rewind into the retractor. As the belt is rewinding, clicks will be heard which indicate the retractor functions as ALR.
8. Push and pull the child restraint system forward and from side to side to check if it is firmly secured. Sometimes a child restraint can be more firmly secured by pushing it down into the seat cushion and then tightening the seatbelt.

9. Pull at the shoulder portion of the belt to confirm that it cannot be pulled out (ALR properly functioning).

10. To remove the child restraint system, press the release button on the seatbelt buckle and allow the belt to retract completely. The belt will return to the ELR mode.

**WARNING**

NEVER INSTALL A REARWARD FACING CHILD SEAT IN THE FRONT PASSENGER'S SEAT. DOING SO RISKS SERIOUS INJURY OR DEATH TO THE CHILD BY PLACING THE CHILD'S HEAD TOO CLOSE TO THE SRS AIRBAG.

**NOTE**

When the child restraint system is no longer in use, remove it and restore the

ELR function of the retractor. That function is restored by retracting the seatbelt fully.

- **Installing forward facing child restraint**

1. Slide the seat or seat pair to its rearmost position.
2. Adjust the seatback to the upright position.
3. Place the child restraint system in the seating position.
4. Run the lap and shoulder belt through or around the child restraint system following the instructions provided by its manufacturer.
5. Insert the tongue plate into the buckle until you hear a click.

--- CONTINUED ---
6. Take up the slack in the lap belt.
7. Pull out the seatbelt fully from the retractor to change the retractor over from the Emergency Locking Retractor (ELR) to the Automatic Locking Retractor (ALR) function. Then, allow the belt to rewind into the retractor. As the belt is rewinding, clicks will be heard which indicate the retractor functions as ALR.

8. Before having a child sit in the child restraint system, move it back and forth and right and left to check if it is firmly secured. Sometimes a child restraint can be more firmly secured by pushing it down into the seat cushion and then tightening the seatbelt.
9. Pull at the shoulder portion of the belt to confirm that it cannot be pulled out (ALR properly functioning).

10. If the child restraint system requires a
top tether, latch the hook onto the top tether anchor and tighten the top tether. See the “Top tether anchorages” for additional instructions.

[Image: Diagram of child restraint system]

11. To remove the child restraint system, press the release button on the seatbelt buckle and allow the belt to retract completely. The belt will return to the ELR mode.

**NOTE**
When the child restraint system is no longer in use, remove it and restore the ELR function of the retractor. That function is restored by allowing the seatbelt to retract fully.

<table>
<thead>
<tr>
<th>Installing a booster seat</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>WARNING</strong></td>
</tr>
<tr>
<td>- Child restraint systems and seatbelts can become hot in a vehicle that has been closed up in sunny weather; they could burn a small child. Check the child restraint system before you place a child in it.</td>
</tr>
<tr>
<td>- Do not leave an unsecured child restraint system in your vehicle. Unsecured child restraint systems can be thrown around inside of the vehicle in a sudden stop, turn or accident; they can strike and injure vehicle occupants as well as result in serious injuries or death to the child.</td>
</tr>
</tbody>
</table>

**CAUTION**
When you install a child restraint system, follow the manufacturer's instructions supplied with it. After installing the child restraint system, check to ensure that it is held securely in position. If it is not held tight and secure, the danger of your child suffering personal injury in the event of an accident may be increased.

1. Slide the seat or seat pair to its rearmost position.
2. Place the booster seat in the rear seating position and sit the child on it. The child should sit well back on the booster seat.

- **CONTINUED** -
3. Run the lap and shoulder belt through or around the booster seat and the child following the instructions provided by its manufacturer.
4. Insert the tongue plate into the buckle until you hear a click. Take care not to twist the seatbelt.
Make sure the shoulder belt is positioned across the center of child’s shoulder and that the lap belt is positioned as low as possible on the child’s hips.

5. To remove the booster seat, press the release button on the seatbelt buckle and allow the belt to retract.

**WARNING**

- Never use a belt that is twisted or reversed. In an accident, this can increase the risk or severity of injury to the child.
- Never place the shoulder belt under the child’s arm or behind the child’s back. If an accident occurs, this can increase the risk or severity of injury to the child.
- The seatbelt should fit snugly in order to provide full restraint. Loose fitting belts are not as effective in preventing or reducing injury.
- Place the lap belt as low as possible on the child’s hips. A high-positioned lap belt will increase the risk of sliding under the lap belt and of the lap belt sliding up over the abdomen, and both can result in serious internal injury or death.
- Make sure the shoulder belt is positioned across the center of child’s shoulder. Placing the shoulder belt over the neck may result in neck injury during sudden braking or in a collision.

**Installation of child restraint systems by use of lower and tether anchorages (LATCH)**

**WARNING**

- Child restraint systems and seatbelts can become hot in a vehicle that has been closed up in sunny weather; they could burn a small child. Check the child restraint system before you place a child in it.
- Do not leave an unsecured child restraint system in your vehicle. Unsecured child restraint systems can be thrown around inside of the vehicle in a sudden stop, turn or accident; they can strike and injure vehicle occupants as well as result in serious injuries or death to the child.
CAUTION

When you install a child restraint system, follow the manufacturer's instructions supplied with it. After installing the child restraint system, check to ensure that it is held securely in position. If it is not held tight and secure, the danger of your child suffering personal injury in the event of an accident may be increased.

Some types of child restraint systems can be installed in a rear seating position of your vehicle without use of the seatbelts. Such child restraint systems are secured to the dedicated anchorages provided on the vehicle body.

The lower and tether anchorages are sometimes referred to as the LATCH system (Lower Anchors and Tethers for Children).

Your vehicle is provided with child restraint system anchors as follows:
- Four lower anchorages (bars) and three upper anchorages (tether anchorages) on the rear seat (5-seater model)/second-row seat (7-seater model)

Lower anchorages for child restraints are provided in the following locations:
- 5-seater models: on the rear seats
- 7-seater models: on the second-row seats

For each window-side seating position, two lower anchorages are provided. Each lower anchorage is located where the seat cushion meets the seatback.

- CONTINUED -
The tether anchorages (upper anchorages) are provided for all the seating positions of the rear seat (5-seater models)/second-row seat (7-seater models).

On each outboard rear/second-row seat, you will find marks "⊗" at the bottom of the seatback. Each lower anchorage is located where the seat cushion meets the seatback.

**CAUTION**

When you install a child restraint system, follow the manufacturer's instructions supplied with it. After installing the child restraint system, check to ensure that it is held securely in position. If it is not held tight and secure, the danger of your child suffering personal injury in the event of an accident may be increased.

1. Slide the seat or seat pair to its rearmost position.

2. Make the clearance between the seat cushion and seatback a little wider to locate the two anchorages (bars) for the position where you want to install the child restraint system.

3. While following the instructions supplied by the child restraint system manufacturer, connect the lower hooks onto the lower anchorages located at "⊗" marks on the bottom of the seatback. When the hooks are connected, make sure the adjacent seatbelts are not caught.
4. [If your child restraint system is of a flexible attachment type (which uses tether belts to connect the child restraint system properly to the lower anchorages).]
While pushing the child restraint into the seat cushion, pull both left and right lower tether belts up to secure the child restraint system firmly by taking up the slack in the belt.
5. Connect the top tether hook to the tether anchorage and firmly tighten the tether.
For information on how to set the top tether, read the following "Top tether anchorages".

6. Before seating a child in the child restraint system, try to move seat back and forth and left and right to verify that it is held securely in position.
7. To remove the child restraint system, follow the reverse procedures of installation.
If you have any question concerning this type of child restraint system, ask your SUBARU dealer.

■ Top tether anchorages
Your vehicle is equipped with three top tether anchorages (five in the 7-seater models) so that a child restraint system having a top tether can be installed in a rear seating position. When installing a child restraint system using top tether, proceed as follows, while observing the instructions by the child restraint system manufacturer.
Since a top tether can provide additional stability by offering another connection between a child restraint system and the vehicle, we recommend that you use a top tether whenever one is required or available.

▼ Tether anchorage location
▼ Rear seat (5-seater models)/Second-row seat (7-seater models)

Three tether anchorages, i.e., ones for the right, center and left seats, are already installed on the back of each seatback. Open the cover flap to use each anchorage.

— CONTINUED —
Third-row seat (7-seater models)

Two tether anchorages are attached to the rear edge of the cargo area. Open the cover flap to use each anchorage.

To hook the top tether

Rear seat (5-seater models)/Second-row seat (7-seater models)

1. Raise the head restraint to the highest position at the seating position where the child seat has been installed using the seatbelt or lower anchorages; lift up the head restraint while pressing the release button.

2. Open the cover flaps to use the anchorages.

3. Fasten the top tether hook of the child restraint system to the appropriate upper anchorage.

4. Tighten the top tether securely.
**CAUTION**

When the child restraint system is to be secured using the top tether, pass the top tether under the head restraint between the head restraint stay posts.

**CAUTION**

Do not route the top tether over the head restraint. It may happen that the top tether cannot be fastened tightly.

**CAUTION**

Be sure to install the top tether with the head restraint raised to the highest position. If the head restraint is in any of the lower positions, the top tether will touch the head restraint and the resulting slack will prevent its secure installation.

---

Third-row seat (7-seater models)

1. Lower the head restraint to its lowest position.

2. Open the lid of the cargo area, then remove the covers for the anchorages.

---

CONTINUED
3. Fasten the top tether hook of the child restraint system to the appropriate upper anchorage.
4. Tighten the top tether securely.

**CAUTION**

Do not pass the top tether under the head restraint. The top tether will touch the head restraint and the resulting slack will prevent its secure installation.

**CAUTION**

Prevent the top tether from touching cargo in the cargo area. The top tether may become slack if the cargo changes shape or moves.

**CAUTION**

Do not use the top tether with the head restraint in a raised position, otherwise the top tether cannot be fastened tightly.

Note: 1. All dimensions are in mm. If not, provide the unit used.
For each vehicle, provide the following information:

1. **How many designated seating positions exist in the vehicle?**
   
   Two types. 5 seat model and 7 seat model. The test vehicle has 5 designated seating positions.

2. **How many designated seating positions are equipped with lower anchorages and tether anchorages? Specify which position(s).**

   *Outer seats in second row. Total 2 seats.*

3. **How many designated seating positions are equipped with tether anchorages? Specify which position(s).**

   *All seats in second and third row. Total 5 seats for 7 seat models. Only 2 seats for 5 seat models since it does not have a third row.*

4. **Lower Anchorage Marking and Conspicuity:** Whether the anchorages are certified to S9.5(a) or S9.5(b) of FMVSS 225.

   *Lower anchorage markings are certified to S9.5(a) of FMVSS225.*
