Acceptance Date: 1/25/2007
Compliance tests were conducted on the subject 2006 Volkswagen Passat 2.0T four-door passenger car in accordance with the specifications of the Office of Vehicle Safety Compliance Test Procedure No. TP-138-02 for the determination of FMVSS 138 compliance. Test failures identified were as follows: NONE.

SECTION 1

INTRODUCTION

1.1 PURPOSE OF COMPLIANCE TEST

A 2006 Volkswagen Passat 2.0T four-door passenger car was tested to determine if the vehicle was in compliance with the requirements of the standard. All tests were conducted in accordance with NHTSA, Office of Vehicle Safety Compliance (OVSC) Laboratory Test Procedure TP-138-02 dated September 14, 2005.

1.2 TEST VEHICLE

The test vehicle was a 2006 Volkswagen Passat 2.0T four-door passenger car. Nomenclatures applicable to the test vehicle are:

A. Vehicle Identification Number: WVWAK93CX6P098883

B. NHTSA No.: C65804

C. Manufacturer: Volkswagen AG Germany

D. Manufacture Date: 10/2005

1.3 TEST DATE

The test vehicle was tested during the time period April 24 through April 26, 2006.
SECTION 2
TEST PROCEDURE AND SUMMARY OF RESULTS

2.1 TEST PROCEDURE

Prior to test, the test vehicle was inspected for completeness, systems operability, and appropriate fuel and liquid levels, i.e. oil and coolant. The vehicle was then photographically documented as required by the DOT/NHTSA Test Procedure. Tire sidewall information was recorded. The owner’s manual was reviewed, and pertinent tire and TPMS information was copied. Telltale symbols, colors, location, and lamp function were checked.

Subsequent events included weighing the vehicle to establish the unloaded vehicle weight (UVW) and the distribution of weight on the front and rear axles and each wheel position. The vehicle was then loaded to test weight and re-weighed. Test weight included the weights of driver, three passengers, and equipment, which was 320 kg (703 lbs).

The vehicle was instrumented with a Racelogic VBOX III 100 Hz GPS Data Logger to measure vehicle velocity, time, and distance during the on-road TPMS calibration and detection phases of the test. A stopwatch was also used to obtain approximate cumulative driving times during each test phase. Upon completion of each tire deflation test scenario, graphs were generated by VBOX software showing vehicle speed versus time for calibration and detection phase, as applicable. The cumulative driving time for each test phase was calculated by post processing the VBOX graph data and is reported in Section 3 (Test Data) as ‘Total Driving Time’.

The tire deflation test consisted of four parts:
1. Calibration phase: Tires were set at vehicle placard cold inflation pressure and the vehicle was driven for at least twenty minutes of cumulative driving time between 50-100 km/h.
2. Detection phase: Immediately after calibration phase, the selected tires were deflated to seven kPa (one psi) below the Telltale Warning Activation Pressure. After one minute, the inflation pressure of only deflated tires were rechecked and adjusted if necessary. Vehicle was started and driven (if necessary) between 50 -100 km/h until low tire pressure telltale illuminated.
3. Cool down phase: Vehicle was parked in test facility garage. Tires were allowed to cool down for one hour, or until all tires excluding deflated tires were within seven kPa (one psi) of vehicle placard cold inflation pressure. After cool down, the vehicle was started and the low tire pressure telltale was checked for re-illumination.
4. Extinguishment phase: Tires were adjusted to vehicle placard cold inflation pressure. The vehicle was driven (if necessary) until the telltale extinguished.

Malfunction detection tests were not attempted. According to the manufacturer, the vehicle’s voluntary malfunction indicator and owner’s manual sections are not compliant with the April 2005 final rule.
2.2 SUMMARY OF RESULTS

Three tire deflation scenarios were run: 1. right rear tire deflated; 2. left front and right front tires deflated; 3. all four tires deflated. The data indicates compliance of the test vehicle’s tire pressure monitoring system for those tire deflation scenarios tested.

REMARKS: Malfunction detection tests were not attempted. The FMVSS 138 malfunction performance requirements do not become effective until September 1, 2007. The test vehicle is equipped with a malfunction capability that would not correctly meet the future requirements.

LOW TIRE PRESSURE WARNING AND MALFUNCTION TELLLTALE

TEST DATE: April 25, 2006   LAB: U. S. DOT San Angelo Test Facility

VEHICLE NHTSA NUMBER: C65804

TPMS Low Tire Pressure Warning Telltale

TPMS Low Tire Pressure Warning Telltale Location: Right side of tachometer, left side of instrument cluster

Telltale is mounted inside the occupant compartment in front of and in clear view of the driver? ✓ YES ☐ NO (fail)

Telltale is part of a reconfigurable display? ☐ YES ✓ NO

Identify Telltale Symbol Used (check box above figure).

Note any words or additional symbols used.
Reconfigurable display provides additional low inflation pressure warnings to driver.

TPMS Malfunction Telltale
( ) None ( ) Dedicated stand-alone ( X ) Combined with low tire pressure telltale
DATA SHEET 2 (Sheet 2 of 2)
LOW TIRE PRESSURE WARNING AND MALFUNCTION TELLTALE

Check Telltale Lamp Functions:
LOW TIRE PRESSURE TELLTALE AND MALFUNCTION INDICATION, IF COMBINED

Identify position of ignition locking system when telltale illuminates.

☐ OFF/LOCK  ☐ Between OFF/LOCK and ON/RUN
☒ ON/RUN  ☐ Between ON/RUN and START

Is the telltale yellow in color? ☑ YES  ☐ NO (fail)

Time telltale remains illuminated 1.65 seconds

Starter Interlocks:

Does vehicle have any starter, transmission or other interlocks that affect operation of the telltale lamp check function? ☐ YES  ☑ NO

TEST RESULTS

Low Tire Pressure Warning Telltale (PASS/FAIL)  PASS

Time vehicle has remained with engine off and tires shielded from direct sunlight (1 hour minimum): 2 hours, 39 minutes (in test facility shop, garage door open)

Note: See Data Sheet 3 (Sheet 2 of 11) for Test Weight. See Data Sheet 3 (Sheet 5 of 11) for Tire Inflation Pressures and Temperatures before Calibration Phase (Re-Adjusted Tire Inflation Pressures).

**SYSTEM CALIBRATION/LEARNING PHASE:**  
(V-Box time - see Section 6 test plots)

**Driving in first direction:**

Starting point: San Angelo Test Facility shop  
Direction: south  
Cumulative vehicle driving time (10 – 15 minutes) at a vehicle speed of 75+ 25 km/h excluding time periods when brake pedal is applied.

- 9:45 minutes (stopwatch time)  
- 14.5 km (9.0 mi) distance

**Driving in opposite direction:**

Starting point: Brodnax Road / Highway 87  
Direction: north  
Cumulative vehicle driving time (5 – 10 minutes) at a vehicle speed of 75+ 25 km/h excluding time periods when brake pedal is applied

- 10:47 minutes (stopwatch time)  
- 14.5 km (9.0 mi) distance

**Max speed:** 86.6 km/hr (53.8 mph)

**Total Driving Time:** 20:58 minutes (V-Box time – see test plots)

</tbody>
</table>

Is it necessary to drive the vehicle to extinguish the telltale? ☐ YES ☑ NO

TEST RESULTS

TPMS Performance Test Results (PASS/FAIL) PASS

Left front, left rear, right front, and right rear tires were deflated.

REMARKS: None
Malfunction detection tests were not attempted. The FMVSS 138 malfunction performance requirements do not become effective until September 1, 2007.
DATA SHEET 5 (Sheet 1 of 2)
TPMS WRITTEN INSTRUCTIONS

TEST DATE: April 26, 2006  LAB: San Angelo Test Facility  VEHICLE NHTSA NO: C65804

Does the Owner’s Manual provide an image of the Low Tire Pressure Warning Telltale symbol (and an image of the TPMS Malfunction Telltale warning (“TPMS”), if a dedicated telltale is utilized for this function)?

☑ YES  ☐ NO

The following statement, in the English language, is provided verbatim in the Owner’s Manual.

☐ YES  ☑ NO

"Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

"As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

"Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

REMARKS: The FMVSS 138 requirements for TPMS written instructions were not effective until September 1, 2006, therefore this vehicle was not subjected to these requirements.

For first sentence of the second required paragraph, VW owner’s manual is missing the text “As an added safety feature, your vehicle is equipped with a tire pressure monitoring system (TPMS).” The manual is also missing the third required paragraph.
The following statement, in the English language, is provided verbatim in the Owner's Manual.

[The following paragraph is required for all vehicles certified to the standard starting on September 1, 2007 and for vehicles voluntarily equipped with a compliant TPMS MIL before that time.] "Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. [For vehicles with a dedicated MIL telltale, add the following statement: The TPMS malfunction indicator is provided by a separate telltale, which displays the symbol “TPMS” when illuminated.] [For vehicles with a combined low tire pressure/MIL telltale, add the following statement: The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists.] When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.”

DATA INDICATES COMPLIANCE: PASS/FAIL

PASS/FAIL: N/A

Does the Owner's Manual include the following (allowable) information?

☑ Significance of the low tire pressure warning telltale illuminating

☑ A description of corrective action to be undertaken

☑ Whether the tire pressure monitoring system functions with the vehicle's spare tire (if provided)

☐ How to use a reset button, if one is provided

☐ The time for the TPMS telltale(s) to extinguish once the low tire pressure condition or the malfunction is corrected

REMARKS: The FMVSS 138 malfunction performance requirements do not become effective until September 1, 2007. Because the test vehicle is equipped with a malfunction capability that would not correctly meet the future requirements, the owner's manual statements are not required to exactly match those above.
