Acceptance Date: September 25, 2007
Compliance tests were conducted on the subject 2007 Chevrolet Colorado pickup truck in accordance with the specifications of the Office of Vehicle Safety Compliance Test Procedure No. TP-110T-01 for the determination of FMVSS 110 compliance. Test failures identified were as follows: Rim labeling failure (S120, S5.2(e)).

SECTION 1

INTRODUCTION

1.1 PURPOSE OF COMPLIANCE TEST

A 2007 Chevrolet Colorado pickup truck was tested to determine if the vehicle was in compliance with the requirements of FMVSS 110. All tests were conducted in accordance with NHTSA, Office of Vehicle Safety Compliance (OVSC) Laboratory Test Procedure, TP-110T-01, dated December 15, 2005.

This standard establishes requirements to ensure that applicable vehicles are equipped with tires of adequate size and load rating and rims of appropriate size and type designation. This standard also establishes location, content of the Vehicle Certification label, and format requirements for the Vehicle Placard, and optional Tire Inflation Pressure Label.

1.2 TEST VEHICLE

The test vehicle was a 2007 Chevrolet Colorado pickup truck. Nomenclatures applicable to the test vehicle are:

A. **Vehicle Identification Number**: 1GCCS149278249529

B. **NHTSA No.**: C70106

C. **Manufacturer**: General Motors Corporation

D. **Manufacture Date**: 06/2007

1.3 TEST DATE

The test vehicle was tested August 24 through August 27, 2007.
SECTION 2

TEST PROCEDURE AND SUMMARY OF RESULTS

2.1 TEST PROCEDURE

The test vehicle was inspected for completeness, systems operability, and appropriate fuel and liquid levels, i.e. oil and coolant. The vehicle was then photographically documented as required by the NHTSA/OVSC Test Procedure. Tire sidewall information was recorded. The owner’s manual was reviewed. Pertinent information from the tire and the rim was photographed.

Subsequent events included weighing the vehicle to establish delivered Unloaded Vehicle Weight and the distribution of weight on the front and rear axles and each wheel position. At each step of the ballasting procedure, data was recorded. Vehicle was ballasted to Full Occupant Load, and Maximum Vehicle Load weight. Ballast was photographically documented for Maximum Vehicle Load weight. The vehicle maximum load on each wheel was measured. Data from each tire furnished with the vehicle were recorded. Tire size and recommended inflation pressure information was taken from vehicle placard. Tire and rim information was also taken from the vehicle certification label. The right front wheel was removed from the vehicle and the tire was dismounted from the rim. The rim was measured from flange to flange, and rim markings were photographically documented. The owner’s manual was checked for all required information on tire loading, and on general tire and loading parameters.

2.2 SUMMARY OF RESULTS

The Chevrolet Colorado test vehicle appears to be in compliance with all FMVSS 110 requirements tested. The test vehicle appears to be in compliance with all 120 requirements tested except for the date-of-manufacture rim marking requirement. The date-of-manufacture information impressed on the rims was not in the format specified by S120, S5.2(e).
SECTION 3
TEST DATA
DATA SUMMARY SHEET (1 of 2)

VEHICLE MAKE/MODEL/BODY STYLE: 2007 Chevrolet Colorado pickup truck

VEHICLE NHTSA NUMBER: C70106 VIN: 1GCCS149278249529

VEHICLE TYPE: MPV DATE OF MANUFACTURE: 06/2007

LABORATORY: US DOT San Angelo Test Facility

LIGHT TRUCK TYPE REQUIREMENTS

General (Data Sheet 2)

The vehicle must be equipped with tires that meet the requirements of S109 or S119. (S120, S5.1.1)  

PASS

Tire Load Limits (Data Sheet 2)

The sum of the maximum load ratings of the tires fitted to an axle is not less than the gross axle weight rating (GAWR) of the axle system as specified on the certification label. (S120, S5.1.2)

PASS

Rim (Data Sheet 3)

Each rim is constructed to the dimensions of a rim specified for the tire size equipped on the vehicle. (S120, S5.1.1)  

PASS

Each rim is properly marked. (S120, S5.2)  

FAIL

Certification, Placard, and Tire Inflation Pressure Labels (Data Sheets 4)

The placard and tire inflation pressure label (if provided) are affixed and located correctly, and display the information and format required. (S110, S4.3)  

PASS

The Part 567 certification label shows the size designation of the tires and rims appropriate for the vehicle including the tire size(s) listed on the vehicle placard and, if provided, tire inflation pressure label (S110, S4.3.3)  

PASS

No inflation pressure other than the maximum permissible inflation pressure is shown on the placard and, if any, tire inflation pressure label unless as required (S110, S4.3.4)  

PASS
Vehicle Weight Distribution (Data Sheet 5)

The Gross Vehicle Weight Rating (GVWR) is not less than the sum of the unloaded vehicle weight, rated cargo load, and 68 kg times the vehicle’s designated seating capacity. However, for school buses, the minimum occupant weight allowance is 54 kg. (49 CFR 567, Certification)

Owner’s Manual (Data Sheet 6)

Owner’s manual or other document has discussion of Loading and Tires (Part 575.6 (a)(4))

Owner’s manual includes exact statement relating to “Steps for Determining Correct Load Limits.” (Part 575.6 (a)(5))

2003 European Tyre and Rim Technical Organisation Yearbook
DATA INDICATES COMPLIANCE: PASS/FAIL: FAIL

REMARKS: Date-of-manufacture format does not meet the requirement of FMVSS 120, S5.2(e). Per the COTR, “065” stands for day of the year, “7” stands for 2007, and “II” stands for second shift. S5.2 specifies month, day and year or the month and year of manufacture, expressed either numerically or by use of a symbol.

**Vehicle Placard**

![Vehicle Placard Diagram](image1)

**Tire Inflation Pressure Label**

![Tire Inflation Pressure Label Diagram](image2)

Labeling Notes:

1. Tire size and pressure can be omitted from the Vehicle Placard if same data is displayed on a Tire Inflation Pressure Label.
2. The Alphanumeric Identifier or Barcode is optional. It can be located vertically, along the right edge or the left edge of the placard or the label, or horizontally, along the bottom edge of the placard or the label.
3. Tire size can include the tire load range identification symbol (“XL” or “reinforced”, “B”, “C”, “D”, “E”, or “F”), the load index number, and the speed rating symbol, located immediately to the right of the tire size designation.
4. The tire “SIZE” heading can be replaced with “ORIGINAL TIRE SIZE” or “ORIGINAL SIZE.”
5. The “SPARE” tire heading can be replaced with “SPARE TIRE.”
6. For full size spare tires, the recommended cold tire inflation pressure can be replaced with “SEE ABOVE.”
7. If no spare tire is provided, the word “NONE” is to replace the manufacturer’s cold tire inflation pressure.

**Vehicle Placard** has the exact color and format as specified in the above Figure 1 and text is in English language. (X) YES ( ) NO

If no, explain: ________________________________
Vehicle Placard and, if provided, Tire Inflation Pressure Label are permanently affixed.

</table>

* Vehicle and axle weight ratings (GVWR & GAWR) are located on the vehicle certification label. Vehicle tire load ratings are based upon the inflation pressure specified on the Vehicle Placard or Tire Inflation Pressure Label for each respective axle, as determined from the appropriate Tire and Rim reference manual. If a passenger car tire is installed on a multipurpose passenger vehicle (MPV), truck or bus, the tire’s load rating is reduced by dividing by 1.10.

The following statement, in the English language, is provided verbatim in the Owner’s Manual. Reference Part 575.6(a)(5) YES ( X ) NO ( )

Steps for Determining Correct Load Limit

1. Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs.” on your vehicle’s placard.
2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.
3. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.
4. The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the “XXX” amount equals 1400 lbs. and there will be five 150 lbs passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400-750 (5x150) = 650 lbs.)
5. Determine the combined weight of the luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.
6. If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

DATA INDICATES COMPLIANCE: PASS/F failure: PASS

REMARKS: None

LABORATORY NOTICE OF TEST FAILURE TO OVSC

FMVSS NO.: 110/120  TEST DATE: August 27, 2007

LABORATORY: US DOT San Angelo Test Facility

LABORATORY PROJECT ENGINEER’S NAME: Kenneth H. Yates

TEST SPECIMEN DESCRIPTION: 2007 Chevrolet Colorado pickup truck

NHTSA VEHICLE NUMBER: C70106  VIN: 1GCCS149278249529

MFR: General Motors Corporation

TEST FAILURE DESCRIPTION: Rim date-of-manufacture format does not indicate rim information as required by FMVSS 120, S5.2, and verified by FMVSS 110/120 testing. See photograph of rim, Figure 5.12 in report 110-STF-07-003.

FMVSS REQUIREMENT, PARAGRAPH: S120, S5.2

Each rim shall be marked with “The month, day and year or the month and year of manufacture, expressed either numerically or by use of a symbol, at the option of the manufacturer”.

NOTIFICATION TO NHTSA (COTR): Theresa Lacuesta

DATE: August 27, 2007  BY: Kenneth H. Yates
