1.1 PURPOSE OF COMPLIANCE TEST

A 2008 Honda Accord four-door passenger car was tested to determine if the vehicle was in compliance with the requirements of FMVSS 138. All tests were conducted in accordance with NHTSA/Office of Vehicle Safety Compliance (OVSC) Laboratory Test Procedure TP-138-03 dated July 12, 2007.

1.2 TEST VEHICLE

The test vehicle was a 2008 Honda Accord four-door passenger car. Nomenclatures applicable to the test vehicle are:

A. **Vehicle Identification Number**: 1HGCP26368A052441

B. **NHTSA Number**: C85306

C. **Manufacturer**: Honda Motor Corporation

D. **Manufacture Date**: 12/2007

1.3 TEST DATE

The test vehicle was tested during the time period August 5 through August 13, 2008.
SECTION 2
TEST PROCEDURE AND SUMMARY OF RESULTS

2.1 TEST PROCEDURE

Prior to test, the test vehicle was inspected for completeness, systems operability, and appropriate fuel and liquid levels, i.e. oil and coolant. The vehicle was then photographically documented as required by the NHTSA/OVSC Test Procedure. Tire sidewall information was recorded. The owner’s manual was reviewed, and pertinent tire and TPMS information were noted. Telltales’ symbols, colors, locations, and lamp functions were checked.

Subsequent events included weighing the vehicle to establish the Unloaded Vehicle Weight (UVW) and the distribution of weight on the front and rear axles and each wheel position. The vehicle was loaded to its Lightly Loaded Vehicle Weight (LLVW) for two tire deflation scenarios. This LLVW included the weights of driver, one passenger, and test equipment. The vehicle was loaded to its Unloaded Vehicle Weight plus Vehicle Capacity Weight (VCW) for two additional tire deflation scenarios. The VCW included the weights of driver, one passenger, test equipment, ballast in the rear seat, and ballast in the internal cargo area. The vehicle is required to be loaded to its maximum capacity without exceeding either the Vehicle Capacity Weight or Gross Vehicle Weight Rating (GVWR). For determination of the telltale warning activation pressure, the recommended cold inflation pressure was identified from the vehicle placard.

The vehicle was instrumented with a Racelogic VBOX III 100 Hz GPS Data Logger and brake pedal trigger. The VBOX uses GPS to measure vehicle speed, time, and distance. Test data were recorded to a compact flash card. During the test, a stopwatch was used to determine the approximate “cumulative driving time” during each test phase. Cumulative driving time does not include time during the brake application or when the vehicle speed was below 50 km/h or above 100 km/h. Upon completion of a tire deflation scenario, graphs were generated by VBOX software showing vehicle speed versus time during the test procedures. The graphs furnish a second-by-second analysis of each calibration phase. The cumulative driving time was calculated by post processing the VBOX graph data and is reported in Section 3 (Test Data) as ‘Total Driving Time’. Driving above 50 km/h was not required for the detection phases.

The tire deflation test scenario consisted of four phases:
1. Calibration phase: Tires were set at vehicle placard cold inflation pressure and the vehicle was driven for at least twenty minutes of cumulative driving time between 50 and 100 km/h.
2. Detection phase: Immediately after calibration phase, the selected tire(s) were deflated to seven kPa (one psi) below the Telltale Warning Activation Pressure. After one minute, the inflation pressures of only deflated tires were rechecked and adjusted if necessary. The vehicle was started and driven to verify telltale illumination and in all scenarios illumination occurred before 50 km/h was reached.
3. **Cool down phase:** Vehicle was parked in the San Angelo Test Facility (SATF) open bay shielded from direct sunlight. Tires were allowed to cool down for a minimum of one hour. After cool down, the vehicle was started and the low tire pressure telltale was checked for re-illumination.

4. **Extinguishment phase:** Tires were adjusted to vehicle placard cold inflation pressure. The vehicle is normally started and driven between 50 and 100 km/h to verify telltale extinguishment, but in these instances the Accord telltale extinguished before 50 km/h was reached.

A malfunction detection scenario was performed with the vehicle loaded to its LLVW. A malfunction was simulated by removing the TPMS Electronic Control Unit (ECU) fuse. The malfunction telltale illuminated immediately upon engine ignition. Driving the vehicle was not necessary.

### 2.2 SUMMARY OF RESULTS

Two tire deflation scenarios were performed on the test vehicle at LLVW:

A. Right rear  
B. Left front, left rear, and right front

Two tire deflation scenarios were performed on the test vehicle at UVW + VCW:

E. Right front and left rear  
F. Left front, left rear, right rear, and right front

The data indicate compliance of the test vehicle’s tire pressure monitoring system for the four tire deflation scenarios tested.

One malfunction detection scenario was performed on the test vehicle at LLVW. The vehicle’s dedicated malfunction telltale properly indicated a malfunction per the standard’s requirements.

Is it necessary to drive the vehicle to extinguish the telltale? (X) YES ( ) NO

Starting point: San Angelo Test Facility shop
Direction: west
1:06 minutes (stopwatch time – non-cumulative)
0.3 km (0.2 mi) distance

### TEST RESULTS

TPMS Performance Test Results (PASS/FAIL) PASS
Left front, left rear, right rear, and right front tires were deflated at UVW + VCW.

### REMARKS: None

RECORDED BY: Jack R. Stewart DATE: August 7, 2008
APPROVED BY: Kenneth H. Yates
TEST DATE: August 6, 2008 LAB: U.S. DOT San Angelo Test Facility

VEHICLE NHTSA NUMBER: C85306

Time: Start: 10:15 am End: 10:19 am

Odometer Reading: Start: 154.5 km (96.0 mi) End: 154.5 km (96.0 mi)

Ambient Temperature: Start: 27.9°C (82.2°F)

Fuel Level: Start: Full

Note: See Data Sheet 3 (Sheet 2 of 16) for Test Weight.

TPMS TYPE: ( X ) Direct ( ) Indirect ( ) Other Describe: ______________________________

TPMS MALFUNCTION TELLTALE:
( X ) Dedicated stand-alone ( ) Combination low tire pressure warning/malfunction telltale

METHOD OF MALFUNCTION SIMULATION:
Describe method of malfunction simulation: ECU fuse was removed.

MALFUNCTION TELLTALE ILLUMINATION
(after ignition locking system is activated to “On” (“Run”) position):

Dedicated Malfunction Telltale
Did the telltale illuminate? ( X )YES ( )NO

Time to Illumination:
Telltale illuminated immediately. Driving was not required.

DEDICATED MALFUNCTION TELLTALE ILLUMINATES (FLASHING AND ILLUMINATION SEQUENCE) WITHIN 20 MINUTES:
( X )YES ( )NO
DATA SHEET 4 (Sheet 2 of 2)
SCENARIO E– Malfunction Detection Test at LLVW

After 5 minutes with the ignition locking system in the “Off” or “Lock” position, does the
dedicated low tire pressure/malfunction telltale re-illuminate and then remain illuminated for at
least 60 seconds when the ignition locking system is activated to the “On” or “Run” position?
( X )YES   (   )NO (fail)

After deactivating the ignition locking system and then re-starting the engine, does the telltale
re-illuminate and stay illuminated for at least 60 seconds?       ( X )YES   (   )NO (fail)

Extinguishment Phase:

Restore the TPMS to normal operation. Does the malfunction telltale extinguish after the
engine is started?       ( X ) YES   (   )NO

DEDICATED MALFUNCTION TELTTALE EXTINGUISHEd:
( X )YES   (   )NO (FAIL)

TPMS MALFUNCTION PERFORMANCE TEST RESULTS (PASS/FAIL)   PASS
Fuse was removed to disable TPMS ECU.

REMARKS: None

RECORDED BY: Jack R. Stewart         DATE: August 6, 2008
APPROVED BY: Kenneth H. Yates
The following statement, in the English language, is provided verbatim in the Owner’s Manual. (X) YES ( ) NO

"Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale."
As specified, the following sections, in the English language, are required verbatim in paragraph form in the Owner’s Manual:

The following statement is required for all vehicles certified to the standard starting on September 1, 2007 and for vehicles voluntarily equipped with a compliant TPMS MIL before that time.

"Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly."

The above statement in the English language is provided verbatim in owner’s manual:  
( X )YES    (   )NO

For vehicles with a dedicated MIL telltale, add the following statement:

"The TPMS malfunction indicator is provided by a separate telltale, which displays the symbol "TPMS" when illuminated."

The above statement in the English language is provided verbatim in owner’s manual:  
( X )YES    (   )NO    (   )N/A

For vehicles with a combined low tire pressure/MIL telltale, add the following statement:

"The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists."

The above statement in the English language is provided verbatim in owner’s manual:  
(   )YES    (   )NO ( X )N/A

The following statement is required for all vehicles certified to the standard starting on September 1, 2007 and for vehicles voluntarily equipped with a compliant TPMS MIL before that time.

“When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS from functioning properly. Always check the TPMS malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly.”

The above statement in the English language is provided verbatim in owner’s manual:  
( X )YES    (   )NO

DATA INDICATES COMPLIANCE: PASS/FAIL  
PASS/FAIL:  PASS
DATA SHEET 5 (Sheet 3 of 3)
TPMS WRITTEN INSTRUCTIONS

Does the Owner’s Manual provide an image of the Low Tire Pressure Warning Telltale symbol (and an image of the TPMS Malfunction Telltale warning (“TPMS”), if a dedicated telltale is utilized for this function)?

( X )YES  (   )NO

Does the Owner’s Manual include the following (allowable) information?

☑ Significance of the low tire pressure warning telltale illuminating

☑ A description of corrective action to be undertaken

☑ Whether the tire pressure monitoring system functions with the vehicle’s spare tire (if provided)

☐ How to use a reset button, if one is provided

☑ The time for the TPMS telltale(s) to extinguish once the low tire pressure condition or the malfunction is corrected

REMARKS:  None

TEST PLOTS
Scenario A: Right Rear Tire at LLW
Test Date: 8/6/08
Data File Time: 24:02 minutes
Cumulative Driving Time: 20:41 minutes
Start Point: GAFB North Gate

Calibration Phase:

RR Detection Phase: Telltale illumination in 1:30 minutes. Driving above 50 km/h (31 mph) was not required.
Scenario B: Left Front, Left Rear, Right Front Tires at LLVW
Test Date: 8/6/08
Data File Time: 24:02 minutes
Cumulative Driving Time: 20:39 minutes
Start Point: GAFB North Gate

Calibration Phase:

LF, LR, RF Detection Phase: illumination in 1:47 minutes. Driving above 50 km/h (31 mph) was not required.
Scenario C: Left Rear, Right Front Tires at UVW + VCW

Test Date: 8/7/08

Data File Time: 24:02 minutes
Cumulative Driving Time: 20:35 minutes
Start Point: GAFB North Gate

Calibration Phase:

LR, RF Detection Phase: Telltale illumination in 0:59 minutes. Driving above 50 km/h (31 mph) was not required.
Scenario D: Left Front, Left Rear, Right Rear, Right Front Tires at UVW + VCW
Test Date: 8/7/08
Data File Time: 24:29 minutes
Cumulative Driving Time: 20:35 minutes
Start Point: GAFB North Gate

Calibration Phase:

LF, LR, RR, RF Detection Phase: Telltale illumination in 0:02 minutes. Driving above 50 km/h (31 mph) was not required.
