16. Abstract
   Compliance tests were conducted on the subject 2008 Scion XD Passenger Car in accordance with the specifications of the Office of Vehicle Safety Compliance Test Procedure No. TP-118-06 for the determination of FMVSS 118 compliance.

   Test failures identified were as follows:
   None

SECTION 1

PURPOSE OF COMPLIANCE TEST

1.0 PURPOSE OF TEST

A model year 2008 Scion XD Passenger Car was subjected to Federal Motor Vehicle Safety Standard (FMVSS) No. 118 testing to determine if the vehicle was in compliance with the requirements of the standard. FMVSS 118 specifies requirements for power-operated window, partition, and roof panel systems to minimize the likelihood of death or injury from their accidental operation.

1.1 The test vehicle was a 2008 Scion XD Passenger Car. The vehicle was identified as follows:

A. **Vehicle Identification Number:** JTKKU10468J015848

B. **NHTSA No.:** C85107

C. **Manufacturer:** TOYOTA MOTOR CORPORATION

D. **Manufacture Date:** 11/07

E. **Color:** Black Sand Pearl

1.2 TEST DATE

The test vehicle was subjected to FMVSS No. 118 testing on September 29, 2008.
SECTION 2

TEST PROCEDURE AND SUMMARY OF RESULTS

2.0 TEST PROCEDURE

All tests were conducted in accordance with NHTSA, Office of Vehicle Safety Compliance (OVSC) Laboratory Procedure TP-118-06 dated 12 April 2006 and General Testing Laboratories, Inc. (GTL) Test Procedure, TP-118-03A, “Power Operated Window, Partition and Roof Panel Systems”.

FMVSS 118 Compliance Testing was performed in the following sequence:

A. Test Vehicle Identification/Documentation
B. Power Window, partition and roof panel identification/documentation
C. Interior, exterior and remote control switch identification/documentation
D. Pre-test operation of all power windows, partitions and roof panels
E. Photograph vehicle and interior, exterior and remote control devices
F. Perform Interior Locking System Off Test
G. Perform Interior Locking System with Key Removed Test
H. Perform Exterior Locking System Test
I. Perform Remote Actuation Device Test
J. Perform Occupant Compartment Actuation Device Test (Sphere Test/Pull up or Pull Out Test)
K. Perform Automatic Reversal System Test

Above tests H, I, and K were not required on this vehicle due to no exterior or remote actuation devices. Test J was performed for information purposes only.

2.1 SUMMARY OF RESULTS

The power window operational test resulted in no anomalies being noted. Test data indicate the FMVSS 118 requirements appear to have been satisfied. All test data resulting from the tests were recorded on test data sheets in Section 3.
SECTION 3

Keys

These keys work in every lock.
Since the side doors can be locked without a key, you should always carry a spare key in case you accidentally lock your keys inside the vehicle.
For information on use of the wireless remote control key, see "Wireless remote control" below.

KEY NUMBER PLATE
Your key number is shown on the plate. Keep the plate in a safe place such as your wallet, not in the vehicle.
If you should lose your keys or if you need additional keys, duplicates can be made by a Scion dealer using the key number.
We recommend writing down the key number and storing it in a safe place.

Wireless remote control—

1. Indicator light
2. Lock switch
3. Panic switch
4. Unlock switch
The wireless remote control system is designed to lock or unlock the side doors and back door, or activate the panic mode from a distance within approximately 1 m (3 ft.) of the vehicle.
When you operate any switch, push it slowly and securely. At this time, the indicator light flashes once.

The wireless remote control key is an electronic component. Observe the following instructions in order not to cause damage to the key.
- Do not leave the key in places where the temperature becomes high such as on the dashboard.
- Do not disassemble it.
- Avoid knocking it hard against other objects or dropping it.
- Avoid putting it in water.
You can use up to 4 wireless remote control keys for the same vehicle. Contact your Scion dealer for detailed information.
If the wireless remote control key does not actuate the doors or operate from a normal distance, or the indicator light on the key is dimmed or does not come on:
- Check for closeness to a radio transmitter such as a radio station or an airport which can interfere with normal operation of the key.
- The battery may have been consumed. Check the battery in the key. To replace the battery, see "—Replacing battery" on page 12.

If you lose your wireless remote control key, contact your Scion dealer as soon as possible to avoid the possibility of theft, or an accident. (See "If you lose your keys" on page 221.)

FCC ID: MGZB41TG
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
Power windows

The windows can be operated with the switch on each side door.
The power windows work when the engine switch is in the “ON” position.

Key off operation: If both front doors are closed, they work for 45 seconds even after the engine switch is turned off. They stop working when either front door is opened.

OPERATING THE DRIVER’S WINDOW
Use the switch on the driver’s door.
Normal operation: The window moves as long as you hold the switch.
To open: Lightly push down the switch.
To close: Pull up the switch.

Automatic operation (to open only): Push the switch completely down and then release it. The window will fully open. To stop the window partway, lightly pull the switch up and then release it.

OPERATING THE PASSENGERS’ WINDOWS
Use the switch on each passenger’s door or the driver’s door that controls each passenger’s window.
The window moves as long as you hold the switch.
To open: Push down the switch.
To close: Pull up the switch.
If you push in the window lock switch on the driver’s door, the passengers’ windows cannot be operated.

⚠️ CAUTION
To avoid death or serious personal injury, you must do the following:

- Before you close the power windows, always make sure there is nobody around the power windows. You must also make sure the heads, hands and other parts of the bodies of all occupants are kept completely inside the vehicle. If someone’s neck, head or hands get caught in a closing window, it could result in death or serious injury. When anyone closes the power windows, make sure he or she operates the windows safely.

- When small children are in the vehicle, never let them use the power window switches without supervision. Use the window lock switch to prevent them from making unexpected use of the switches.

- Be sure to remove the ignition key when you leave your vehicle.

- Never leave anyone (particularly a small child) alone in your vehicle, especially with the ignition key still inserted. Otherwise, he or she could use the power window switches and get trapped in a window. Unattended person (particularly a small child) can be involved in a serious accident.
**Engine (ignition) switch**

"START"—Starter motor on. The key will return to the "ON" position when released.

For starting tips, see page 190.

"ON"—Engine on and all accessories on.

This is the normal driving position.

"ACC"—Accessories such as the radio operate, but the engine is off.

If you leave the key in the "ACC" or "LOCK" position and open the driver's door, a buzzer will remind you to remove the key.

"LOCK"—Engine is off and the steering wheel is locked. The key can be removed only at this position.

You must push in the key to turn the key from "ACC" to the "LOCK" position. On vehicles with an automatic transmission, the selector lever must be put in the "P" position before pushing the key.

When starting the engine, the key may seem stuck at the "LOCK" position. To free it, first be sure the key is pushed all the way in, and then rock the steering wheel slightly while turning the key gently.

Approximately 5 hours after the engine is turned off, you may hear a sound coming from underneath the luggage compartment for several minutes. This is normal operation and does not indicate a malfunction. (See "Leak detection pump" on page ix.)
