SECTION 1

INTRODUCTION

1.1 PURPOSE OF COMPLIANCE TEST

A 2009 Chevrolet Impala four-door passenger car was tested to determine if the vehicle was in compliance with the requirements of FMVSS 401. All tests were conducted in accordance with NHTSA/Office of Vehicle Safety Compliance (OVSC) Laboratory Test Procedure TP-401-01 dated August 8, 2007.

1.2 TEST VEHICLE

The test vehicle was a 2009 Chevrolet Impala four-door passenger car. Nomenclatures applicable to the test vehicle are:

A. Vehicle Identification Number: 2G1WB57K991103176

B. NHTSA Number: C90100

C. Manufacturer: General Motors Corporation

D. Manufacture Date: 07/2008

1.3 TEST DATE

The test vehicle was tested January 8, 2009.
SECTION 2
TEST PROCEDURE AND DISCUSSION OF RESULTS

2.1 TEST PROCEDURE

Prior to test, the test vehicle was inspected for completeness and systems operability, including battery capability and trunk closure function. The vehicle was then photographically documented as required by the NHTSA/OVSC Test Procedure. The owner’s manual was reviewed, and pertinent trunk release information was noted.

The rear trunk manual release system stationary vehicle tests were conducted with an occupant enclosed in the trunk compartment with the lid shut. An assistant was present and prepared to release the occupant if necessary. The compartment was evaluated with all removable equipment furnished by the manufacturer stowed in accordance with vehicle label instructions.

The procedure used consists of the following steps:
1. Determine the means by which a trapped person within the trunk would escape from the compartment, e.g. pull of a T-handled release mechanism, rotation of fixed lever release mechanism, push of a button, etc.
2. For informational purposes, install a linear force transducer to the release mechanism determined above and record the force required to be applied by the trapped occupant to escape.
3. Verify that the release mechanism is visible in the darkened trunk S4.2(a), and determine method used, e.g. phosphorescence or auxiliary lighting. Some time may be required to allow for the eyes to adjust to the darkened environment within the trunk compartment. Photograph if possible the lighted release mechanism.
4. With the vehicle stationary and no key in the ignition (representing unoccupied vehicle), actuate the release mechanism and verify that the trunk lid releases from all latching positions. Record force required during 3 attempts to release trunk latching mechanism.
5. Repeat step 4 above, except with the engine idling (time with trunk lid latched not to exceed 30 seconds).

2.2 DISCUSSION OF RESULTS

The force required to release the trunk lid did not exceed twenty-three (23) Newtons on any attempt. The data indicate compliance of the test vehicle’s manual trunk release system for the No Key in Ignition and the Idling Vehicle trunk release tests.

TEST PREPARATION INFORMATION

MODEL YEAR/MAKE/MODEL/BODY STYLE:  2009 Chevrolet Impala 4-door passenger car

VEHICLE NHTSA NUMBER:  C90100  TEST DATE:  January 8, 2009

TRUNK LOCATION:  Rear

NUMBER OF TRUNK LATCHING POSITIONS:  One

INTERIOR TRUNK RELEASE:  Manual

EQUIPPED WITH POWER CLOSURE ASSISTING DEVICE:  No

OWNER'S MANUAL DESCRIPTION OF TRUNK RELEASE:  Yes

REMOVABLE EQUIPMENT DELIVERED IN TRUNK:

- SPARE TIRE:  Yes  SIZE:  T125/70D16
- TIRE JACK:  Yes
- LUG WRENCH:  Yes

REMARKS:  Tire change equipment is stored beneath removable trunk floor.

MANUAL TRUNK RELEASE OPERATION

MODEL YEAR/MAKE/MODEL/BODY STYLE: 2009 Chevrolet Impala 4-door passenger car

VEHICLE NHTSA NUMBER: C90100  TEST DATE: January 8, 2009

Method used to actuate interior trunk release: Grab handle

Can test personnel enter trunk and be closed within? Yes

Size of occupant: 5’ 10”, large frame

Is there access to the trunk compartment by folding down rear seat or partition? No

Does release mechanism require electric power? No

Can release mechanism be easily seen inside the closed trunk? Yes

Method used by vehicle manufacturer to ensure that release mechanism is visible in the closed trunk compartment: Phosphorescence

Laboratory test method used to determine visibility of release mechanism: Trunk entry

### TEST RESULTS

PASS

### REMARKS:

This vehicle has no key entry for the trunk. In the case of a power failure, the trunk will not open using the external trunk releases. Loss of power does not affect the manual trunk release in the trunk compartment. The 2009 Chevrolet Impala has a rear flip-and-fold-flat option to allow trunk access from the rear seat. This test vehicle did not have this option.

Trunk Release
To open the trunk from the outside, press the open trunk button on the remote keyless entry transmitter, if equipped.

Remote Trunk Release
You can also open the trunk from inside the vehicle.

🔑 (Remote Trunk Release): Press the button with the open trunk symbol on it. The button is located next to the exterior lamps control on the left side of the instrument panel. The shift lever must be in PARK (P) for the remote trunk release button to work.

If your vehicle ever loses power, you can open the trunk by lowering the rear seat and pulling the emergency trunk release handle located inside the trunk. See Split Folding Rear Seat on page 1-10 and “Emergency Trunk Release Handle” following.

Emergency Trunk Release Handle
Notice: Do not use the emergency trunk release handle as a tie-down or anchor point when securing items in the trunk as it could damage the handle. The emergency trunk release handle is only intended to aid a person trapped in a latched trunk, enabling them to open the trunk from the inside.

There is a glow-in-the-dark trunk release handle located on the latch inside the trunk. This handle will glow following exposure to light. Pull the release handle to open the trunk from the inside.
