SECTION 1

INTRODUCTION

1.1 PURPOSE OF COMPLIANCE TEST

A 2009 Audi A6 four-door passenger car was tested to determine if the vehicle was in compliance with the requirements of FMVSS 401. All tests were conducted in accordance with NHTSA/Office of Vehicle Safety Compliance (OVSC) Laboratory Test Procedure TP-401-01 dated August 8, 2007.

1.2 TEST VEHICLE

The test vehicle was a 2009 Audi A6 four-door passenger car. Nomenclatures applicable to the test vehicle are:

A. Vehicle Identification Number: WAUCH74F29NO22298

B. NHTSA Number: C95800

C. Manufacturer: Audi AG

D. Manufacture Date: 11/2008

1.3 TEST DATE

The test vehicle was tested January 27, 2009.
SECTION 2
TEST PROCEDURE AND DISCUSSION OF RESULTS

2.1 TEST PROCEDURE

Prior to test, the test vehicle was inspected for completeness and systems operability, including battery capability and trunk closure function. The vehicle was then photographically documented as required by the NHTSA/OVSC Test Procedure. The owner’s manual was reviewed, and pertinent trunk release information was noted.

The rear trunk manual release system stationary vehicle tests were conducted with an occupant enclosed in the trunk compartment with the lid shut. An assistant was present and prepared to release the occupant if necessary. The compartment was evaluated with all removable equipment furnished by the manufacturer stowed in accordance with vehicle label instructions.

The procedure used consists of the following steps:
1. Determine the means by which a trapped person within the trunk would escape from the compartment, e.g. pull of a T-handled release mechanism, rotation of fixed lever release mechanism, push of a button, etc.
2. For informational purposes, install a linear force transducer to the release mechanism determined above and record the force required to be applied by the trapped occupant to escape.
3. Verify that the release mechanism is visible in the darkened trunk S4.2(a), and determine method used, e.g. phosphorescence or auxiliary lighting. Some time may be required to allow for the eyes to adjust to the darkened environment within the trunk compartment. Photograph if possible the lighted release mechanism.
4. With the vehicle stationary and no key in the ignition (representing unoccupied vehicle), actuate the release mechanism and verify that the trunk lid releases from all latching positions. Record force required during 3 attempts to release trunk latching mechanism.
5. Repeat step 4 above, except with the engine idling (time with trunk lid latched not to exceed 30 seconds).

2.2 DISCUSSION OF RESULTS

The force required to release the trunk lid did not exceed twenty-three (23) Newtons on any attempt. The data indicate compliance of the test vehicle’s manual trunk release system for the No Key in Ignition and the Idling Vehicle trunk release tests.

DATA SHEET 3 (Sheet 1 of 2)
MANUAL TRUNK RELEASE OPERATION

MODEL YEAR/MAKE/MODEL/BODY STYLE: 2009 Audi A6 4-door passenger car

VEHICLE NHTSA NUMBER: C95800  TEST DATE: January 27, 2009

Method used to actuate interior trunk release: Rotating lever

Can test personnel enter trunk and be closed within? Yes

Size of occupant: 5’ 10”, large frame

Is there access to the trunk compartment by folding down rear seat or partition? No

Does release mechanism require electric power? No

Can release mechanism be easily seen inside the closed trunk? Yes

Method used by vehicle manufacturer to ensure that release mechanism is visible in the closed trunk compartment: Phosphorescence

Laboratory test method used to determine visibility of release mechanism: Trunk entry

TEST OBSERVER IN TRUNK COMPARTMENT
What do I do now?

Trunk escape handle

*In case of an emergency, the rear lid can be opened from the inside using the trunk escape handle.*

![Trunk escape handle: View from inside the closed trunk](image)

**To open rear lid**
- Pull the handle down towards the bumper ⇒ fig. 255.

The trunk escape handle inside the rear lid is made of fluorescent material to glow in the dark.

---

**WARNING**

The trunk escape handle is to be used only in an emergency.

---

**Tips**

The emergency release lever should never be used as a handle for closing the rear lid.

---

Jack, tools and spare wheel

Jack

*The jack is stored in the luggage compartment behind the right-side trim panel.*

![Luggage compartment vehicle jack](image)

Before storing the jack, make sure it is wound back down as far as it will go.

---

**WARNING**

Improper use of the vehicle jack can cause serious personal injuries.

- Never use the jack supplied with your Audi on another vehicle, particularly on a heavier one. The jack is only suitable for use on the vehicle it came with.
- Using a bumper jack to raise the vehicle will damage the bumper system. The jack may slip, causing injury.
- Never support your vehicle on cinder blocks, bricks or other objects. These may not be able to support the load and could cause injury when they fail.
